

HDX HAPI

The HDX Humanitarian API (HAPI) is a way to access standardised indicators from multiple sources to automate workflows and visualisations

HDX HAPI is in beta phase, and we are seeking feedback. To share your thoughts or join our slack channel, send an email to hdx@un.org.

Data Coverage

Our initial coverage aligns with the data included in the [HDX Data Grids](#), which places the most important crisis data into six categories and 20 sub-categories. Our beta version of HDX HAPI covers 44 indicators across 25 locations that have a [Humanitarian Response Plan](#). This data has been shared by nine different contributing organisations.

Category	Sub-category	Contributor	
Affected People	Humanitarian Needs	OCHA offices	Learn more →
Affected People	Refugees and Persons of Concern	UN Refugee Agency (UNHCR)	Learn more →
Coordination & Context	Conflict Events	The Armed Conflict Location & Event Data Project (ACLED)	Learn more →
Coordination & Context	Funding	OCHA Financial Tracking System (FTS)	Learn more →
Coordination & Context	National Risk	INFORM	Learn more →
Coordination & Context	Who is Doing What Where - Operational Presence	OCHA offices	Learn more →
Food Security & Nutrition	Food Prices	World Food Programme (WFP)	Learn more →
Food Security & Nutrition	Food Security	Food Security and Nutrition Working Group, West and Central Africa	Learn more →
Population & Socio-economy	Baseline Population	United Nations Population Fund (UNFPA) and OCHA offices	Learn more →
Population & Socio-economy	Poverty Rate	The Oxford Poverty and Human Development Initiative (OPHI)	Learn more →

Refer to the [documentation](#) for the latest coverage. [Contact us](#) to request additional indicators in future versions of HDX HAPI.

FAQs

What is an API?
Why did we create HDX HAPI?
We created HDX HAPI following requests from users to be able to access key indicators through one API. Although HDX has an existing API for the data catalogue (through CKAN), it only supports interaction with metadata. HDX HAPI enables direct access to the data itself, allowing users to make queries within datasets and build visualisations and analysis from this data.
Who is HDX HAPI for?
How do I access HDX HAPI?
What data is included in HDX HAPI?
What time period does the data in HDX HAPI cover?
How up-to-date is the data in HDX HAPI?
Is the data in HDX HAPI different from the data I can download from HDX?
How is HDX HAPI different from the HDX CKAN API?
Why would I use HDX HAPI instead of APIs from a single data source?
How do I provide feedback?
