Dear Ludo,

I had a very useful discussion with Franco in Rome. I am enclosing two pages I handed over to him. My comments of 29 May are not any more relevant. I will send soon my evaluation of Workshops I, II. I still hope that SEISMED will continue and that we will not communicate solely by fax.

Regards.

Introduction to Proceedings III

The contents of this volume follows similar outline ~~as~~ adopted for the previous ~~two~~ ~~vol~~ Proceedings I and II. National representatives received detailed instructions for the preparation of national reports and of materials for Group Exercises.

It was recommended to follow as closely as possible the STAPLE matrix (Annex 3) what caused evidently some difficulties for ~~most~~ ^{some} authors. Consequently, ~~most~~ ^{many} national reports contain ^{only} very general information without referring to legal documents or ~~as~~ to specified numerical values on (existing) and organisational structures, investments into

prevention. On the other hand most national materials compiled for both Exercises contain very valuable data on ~~not~~ (expected losses and on very practically oriented experienced on)

investigations foreseen for (selected sites) ~~of~~ ^{for} enhanced economic development (see Table + Co-operative Project Network).

E - accompanying text

'SEISMED Co-operative projects network' summarizes some of the vivid discussion on the major theme of the issue 2. For details on national contributions see ~~the~~ the preceding pages. The fact itself that most Mediterranean countries have designated test sites ~~is an~~ evidences ~~on the~~ that the co-operative network ~~which~~ ^{regional} original developed during the duration of SEISMED into an operational system of ~~research~~ ^{and} exchange of results saving ^(national) funds and manpower and accelerating the progress in applying ^{the} application of modern methodologies. The novelty of ~~it~~ is in the complexity of ~~plan~~ activities planned in the proposed sites starting with local hazard and vulnerability assessments and terminating with disaster management plans. These regionally co-ordinated programmes reflect the present needs of Mediterranean countries in introducing ~~most~~ ^{cost}-effective risk reduction measures. ^{In long term} The expected outputs will undoubtedly contribute to a substantial improvement in protecting population and large investments against the adverse effects of ^{large} earthquakes.
