

Libya Crisis Map

libyacrisismap.net

In the early days of the Libya Crisis, OCHA recognized that limited information was available from inside the country given that the UN could not deploy staff on the ground. At short notice on 1 March 2011, OCHA organized a teleconference with UNOSAT, NetHope and the major Volunteer and Technical Community (V&TC) bodies - Crisis Mappers, Crisis Commons, Harvard Humanitarian Initiative, Open Street Map, and Google's Crisis Response Team – most of which are emerging actors in the humanitarian arena. During that meeting, OCHA requested the activation of the Standby Task Force, a formalized and structured group of volunteers, to monitor news and social media to better understand what was happening inside Libya. The LibyaCrisisMap.net website was then launched and initially supported by over 200 volunteers from around the world. Over time, the site has been supported by hundreds of volunteers who are now being managed by the OCHA Colombia team on behalf of the OCHA Libya office.

What the Crisis Map provides

The Libya Crisis Map provides situational awareness into geographical areas that the UN, and many other international organizations, cannot access due to security limitations. Users of the site can quickly filter the map to show thematic areas of their interest in a geographical area relevant to their needs, perform basic gap analysis, and be alerted of new reports in areas of their interest.

Security concerns for those who report

The data on the public site is delayed by 24 hours and only provides anonymized reports meaning that the information available cannot be used to identify either the individual or group who reported the information. A private, secure site is available for responding agencies where they can view all details of reports that are submitted.

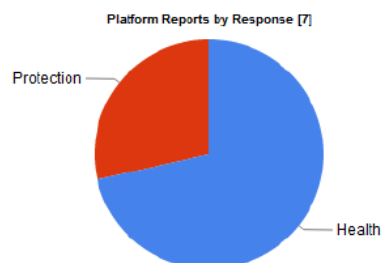

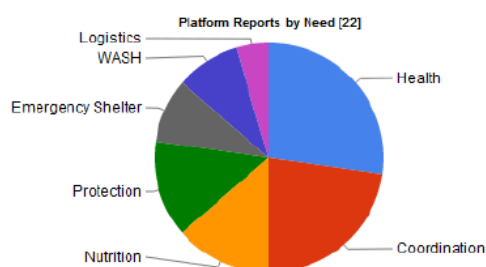

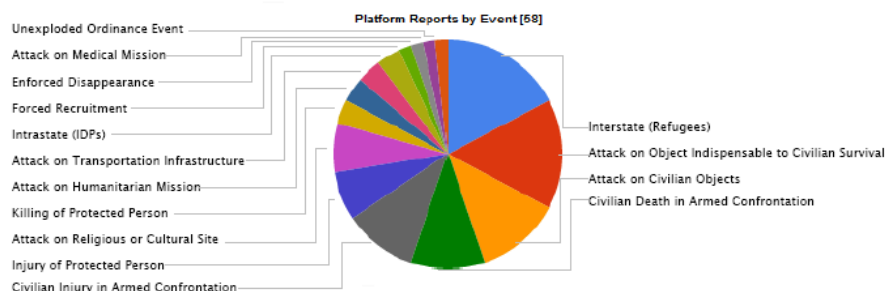

Justification of the Crisis Map

The theoretical and legal framework of this deployment is based in the provisions of the UN Security Council Resolutions 1612, 1820, 1970 and 1973.

After the devastating earthquake in Haiti in January 2010, it became clear that the traditional humanitarian responders would need to find a way to work collaboratively with the newly emerging V&TC. In a joint project, OCHA, the UN Foundation and the Harvard Humanitarian Initiative drafted *Disaster Relief 2.0: The Future of Information Sharing in Humanitarian Emergencies*. It was in the spirit of this document that OCHA invited the V&TC to collaborate on the Libya response leading to the Libya Crisis Map launch. In mid-June, OCHA is hosting a meeting to review the Libya collaboration as well as define the way forward for this collaboration.

VISUALIZATION AND INFORMATION ANALYSIS

The Libya Crisis Map can easily produce a wide range of specialized maps and graph-based analyses. Below are samples released in the 11-May-2011 analysis report.

Protected Persons: Casualties Overview: 02 May – 10 May 2011

Categories included: **Killing of Protected Person**, **Injury of Protected Person**, **Civilian Death in Armed Confrontation**, **Civilian Injury in Armed Confrontation**

Attacks on Protected Objects Overview: 02 May – 10 May 2011

Categories included: **Attack on Medical Mission**, **Attack on Humanitarian Mission**, **Attack on Civilian Object**, **Attack on Object Indispensable to Civilian Survival**
