

Common Request Format Prototype & Development Sprint

What problem are we solving?

- Current method of collecting information in emergencies is labour intensive, manual and prone to error.
- OCHA has poorly defined processes for exchanging information between OCHA and the clusters or sectors.
- It is not easy for OCHA to re-use information that it has collected.
- OCHA has poorly defined internal information requirements (as an office)

What is the CRF?

- The Common Request Format (CRF) is a form, i.e. document (printed or electronic) with spaces in which to write or enter data or narrative.
- The CRF is part of a process for collecting a standard set of data and narrative from clusters or sectors.
- The CRF is one of many structured activities that produce a specific service, product, or tool for OCHA.
- The data and narrative collected in the CRF provides the basis for the Humanitarian Dashboard, the Situation Report, contact lists, survey of surveys and other OCHA information products, services, and tools.

Development Sprint

- April 23-27
- 9 staff, including field staff from Pakistan, ROMENACA, Cote D'Ivoire, & ROWCA
- 270 hours of development

Cluster *

Water Sanitation Hygiene ▼

Humanitarian Needs *

The Health Cluster aims to assist 2.6 million people with access to primary and/or basic secondary health care services, as well as vaccinate 518,000 children under five years of age and 296,000 women of child-bearing age. According to WHO, the number of suspected measles cases in Somalia has increased by over 660% compared to the same time last year. In July, 1,019 suspected measles cases and 31 related deaths were reported in south and central Somalia, compared to 133 cases in July 2010.

Humanitarian Response *

Measles can be prevented by vaccination. However, routine immunization against measles in Somalia currently covers only 29 per cent of children. In response to the suspected measles outbreak, WHO, UNICEF and health authorities have started an emergency measles vaccination campaign in all accessible areas of south and central Somalia. About 2.3 million children aged between 6 and 15 years in 10 regions, including 745,000 children in Mogadishu, will be targeted during this campaign, which will be completed in the next 10 days in Mogadishu and the next 2 to 3 months in the rest of south and central Somalia. In response to the increase in cholera and AWD, an urgent multi-sector response is being mounted.

Gaps *

The cluster's major concern in relation to cholera and AWD is to monitor and detect new disease outbreaks in the many informal settlements in and around Mogadishu. For the last few years, a network of health workers reporting to the early warning system has been established. However, the large number of displaced people in Mogadishu is making it more difficult to record cases.

Humanitarian Needs:

Refugee influxes from Somalia into the Dadaab camp remain high, but have decreased from 1,300 to 800 refugees per day in the past week. Additional shelter is still urgently needed due to the June-August influx of refugees that stretched resources. Tents are currently being issued to registered refugees at LFO extension area.

Humanitarian Response:

The response is ramping up. Some 9,300 tents have been distributed in the camps by UNHCR and its implementing partners since January 2011. Emergency stocks of tents have been mobilized from warehouses in the region and some 11,600 additional tents have been received in Dadaab. The appeal by UNHCR for a further 10,000 tents has so far received 6,000 tents in donations. As of 9 August, a total of 3,416 refugee families (14,434 persons) have been relocated from the outskirts into lfo extension. Development of Kambioos camp is still underway. Kambioos has a planned capacity of 90,000 people.

Gaps:

The tents are expected to last a maximum of one year. Thereafter, it is expected that refugee families will be provided with transitional longer term shelter. However, current guidelines by the Government of Kenya are for the construction of permanent shelter only.

Gaps:

The tents are expected to last a maximum of one year. Thereafter, it is expected that refugee families will be provided with transitional longer term shelter. However, current guidelines by the Government of Kenya are for the construction of permanent shelter only.

Cluster Update: Early Recovery

Humanitarian Needs:

Adding some new content. High rates of severe acute malnutrition continue to be reported in the transit center (9 per cent), as well as Bokolmany (9.5 per cent), Melkadida (13 per cent), and Kobe (48 per cent) camps, while a suspected measles outbreak was reported last week. This calls for an increase in the food response. Protection also continues to be a problem in the camp.

Humanitarian Response:

OCHA Situation Report

III. Humanitarian Needs and Response by Country

SOMALIA

The recent FSNAU/FEWSNET seasonal assessment indicates 4 million people remain in crisis, including 1.8 million in humanitarian emergency and 830,000 in an acute food and livelihood crisis. More than 1.5 million Somalis are internally displaced and over 900,000 Somali refugees are externally displaced in Kenya, Ethiopia, Djibouti and Yemen. A new family tracing and reunification programme has been launched to help reunite families separated by drought, famine and conflict.

Food: The cluster is providing food assistance to 2.2 million of 4 million food insecure (including 372,000 in Mogadishu and 1.33 million in the rest of the south). Only 75 per cent of the cluster members are currently reporting hence the number of beneficiaries could be higher. Interventions include provision of household food rations, vouchers for households to purchase food on the market, daily meals and nutrition interventions for children under five. There is a need for greater coordination and information sharing to ensure all gaps are being addressed and operational locations are identified.

Nutrition: Out of the 450,000 malnourished children under five years in Somalia, 348,335 children have been admitted for treatment for severe and moderate acute malnutrition in stabilisation centres, targeted supplementary feeding centres and outpatient therapeutic programmes since January. Since August, the cluster has also provided Blanket Supplementary Feeding to families with malnourished children under age 5, reaching an estimated 436,314 people in Bay, Bakool, Hiraa, Lower and Middle Shabelle and Middle Juba. The wet feeding programme has been suspended in Dhoobey following a diarrhoea outbreak. Key challenges include insecurity hampering easy movement of staff for monitoring and outreach activities, pipeline inefficiency and partner capacity for a quick scale-up.

Health: Measles is on the rise with estimated 7,000 – 8,000 cases in central and southern Somalia. Since the start of the emergency vaccination campaign in south central Somalia in July, over 1 million children between 6 months and 15 years have been immunized in the emergency vaccination campaign (including polio and measles vaccinations, de-worming tablets and vitamin A supplements) in Banadir, Bakool, Bay, Gido, Hiraa and Lower Juba. However, unvaccinated populations on the move in Mogadishu pose challenges in the control of the measles outbreak. Non-state armed groups are refusing to permit mass public immunization campaigns. WHO and partners continue to negotiate with local authorities to conduct vaccination campaigns. Health cluster partners are operating 24 mobile clinics across Somalia, but no data is yet available on the number of beneficiaries.

WASH: Out of the estimated 3.3 million in need of access to safe water and sanitation, the cluster has provided 1.1 million people with sustainable water access and 1.7 million with temporary water access since January, of whom 1.5 million are in the south. A further 490,000 people are accessing latrines and 1.1 million have benefited from hygiene promotion and non-food item packages.

Agriculture and Livelihoods: Pasture availability is significantly below average. Since January, over 890,000 people have been and/or continue to be involved in cluster interventions including agricultural inputs, cash relief, food vouchers, income generating activities, food for work interventions, training, emergency livestock interventions and animal vaccinations. The cluster's CAP requirement is only 43 per cent funded, limiting the cluster's availability to carry out planned interventions.

Education: The cluster estimates that 380,000 children are benefiting from Education Cluster-supported interventions. Among the interventions are 104 child friendly spaces targeting 5,210 children without access to school in Bakool, Banadir, Bay and Lower Shabelle with essential services include mine risk education, HIV/AIDS awareness campaigns and vaccination campaigns.

Humanitarian Dashboard Somalia – I.

(29 February 2012)

SITUATION OVERVIEW

- FSNAU/FEWSNET announced the end of famine conditions in Southern Somalia on 3 February 2012, with 2.34 million people still in crisis. However, approximately 2.51 million people (33% of the population) are predicted to be in crisis in Somalia between February and June 2012. (FSNAU Technical Report, 2 March 2012).
- The southern regions are hardest hit, hosting 70% (1.7 million) of people in crisis. The most critical needs are food, clean water, and shelter.
- Acute malnutrition levels remain higher than 20% in many areas, and particularly in Lower Juba and Bakool.
- An estimated 325,000 acutely malnourished children are in need of specialized nutritional treatment services; 70% of whom are in the South.
- The London Conference on Somalia took place on 23 February and was used as an opportunity to focus additional attention at the highest

KEY FIGURES (PROJECTION)*

- 2.34 million people in crisis nationwide
- Of these, 1.7 million people are in southern Somalia
- ~31% of total population affected by crisis; ~73% in the South*
- ~18% (1.36 million people) are internally displaced**
- About 968,000 Somalia refugees in the region**
- 325,000 malnourished children (70% in South)*
- Over 20% GAM prevalence in Lower Juba, Bakool and among Mogadishu IDPs*

*FSNAU/FEWSNET Technical Release 3 February 2012. **UNHCR Somalia Data

SITUATION OVERVIEW (CONT)

- Ethiopian Defence Forces (EDF) launched an attack on Baidoa in an effort to force out Al Shabaab, displacing about 7,500 people (Baidoa Flash Report, UNHCR, 5/3/12).
- An upsurge in fighting between TFG/AMISOM forces and Al Shabaab erupted on the outskirts of Mogadishu (near the Afgoye corridor) in mid-February.
- Approximately 37,000 IDPs arrived in various districts of Mogadishu in February, with the majority (22,000) arriving from Afgoye (UNHCR, Population Movement Tracking Monthly Report, February 2012).
- The various clusters have prepositioned supplies in anticipation that an increase in conflict will cause increased displacement into Mogadishu.
- The eviction of people illegally occupying government buildings in Mogadishu was carried out in February increasing pressure on communities and settlements. Approximately 7,500 IDPs were evicted in February (Protection Cluster Update, 24 February 2012).

RESPONSE OVERVIEW

Funding status (11%) per cluster in brackets: unmet requirements in US\$

- 1% (486.3 million) Agriculture & Livelihoods

Number of people targeted by cluster members

Number of people assisted by cluster members 1 - Feb 2012 and 2 - Jan to date

These figures represent local estimates and might be underreported if some cluster members activities are not captured

Agriculture and Livelihoods: ~11% (162,000) of targeted population assisted with food vouchers; 46% (709,000) assisted with cash relief/cash-for-work.

Education: ~92% (571,000) against 623,000 targeted students in 2,625 schools benefitted from cross-cutting educational interventions. ~11,000 teachers assisted.

Food Assistance: ~68% (1.7 m) reached by cluster in February. Of these, 550,000 reached with interventions on improving food access and 1.1 m assisted through livelihood investment activities and safety nets.

Health: ~3% (98,000) of 3 m targeted people reached with essential health services. ~95% (1.1 m) of 1.3 m targeted children under 5 and women of child bearing age immunized in CHD campaign.

Nutrition: ~23% (75,000) of 323,000 targeted malnourished children reached with nutrition interventions.

Protection: ~10% (35,000) victims of protection violations assisted against 356,000 targeted population.

Shelter & NFIs: ~13% (37,000) of 299,000 targeted population received transitional shelter; 15% (175,000) of 1.2 m targeted received EAPs.

WASH: ~13% (327,000) of targeted 2.6 m people assisted with sustainable water; 603,000 people provided with access to temporary water; latrines provided to 15% (198,000) of the target. ~154,000 provided hygiene promotion/ NFI hygiene packages.

Logistics: UNHAS transported 1,795 passengers to locations in Somalia in February.

CRF Dependencies

- CRF is a form that supports related activities and tasks. **It cannot solve the problem without improving related processes.**

CRF Dependencies

- OCHA needs to work on improving the following related activities and/or systems if the CRF is to really add value:
 - Strategy for implementation and long-term maintenance
 - Monitoring framework (specifically indicators)
 - Governance of OCHA's information products
 - Cluster information requirements, management and reporting
 - Indicator Registry

Short Term Issues -2012

- Application development
- Business ownership of the CRF
- Identification of CO for field testing
- Cluster buy-in
- SMT/ASG support for CRF resources 2013

Next Steps

- Cluster consultation
- Further application development
- Field testing / CO consultation
- Further application development
- Limited roll out (later 2012 / early 2013)

Q & A
