Build a coordinated response #buildOnCODs

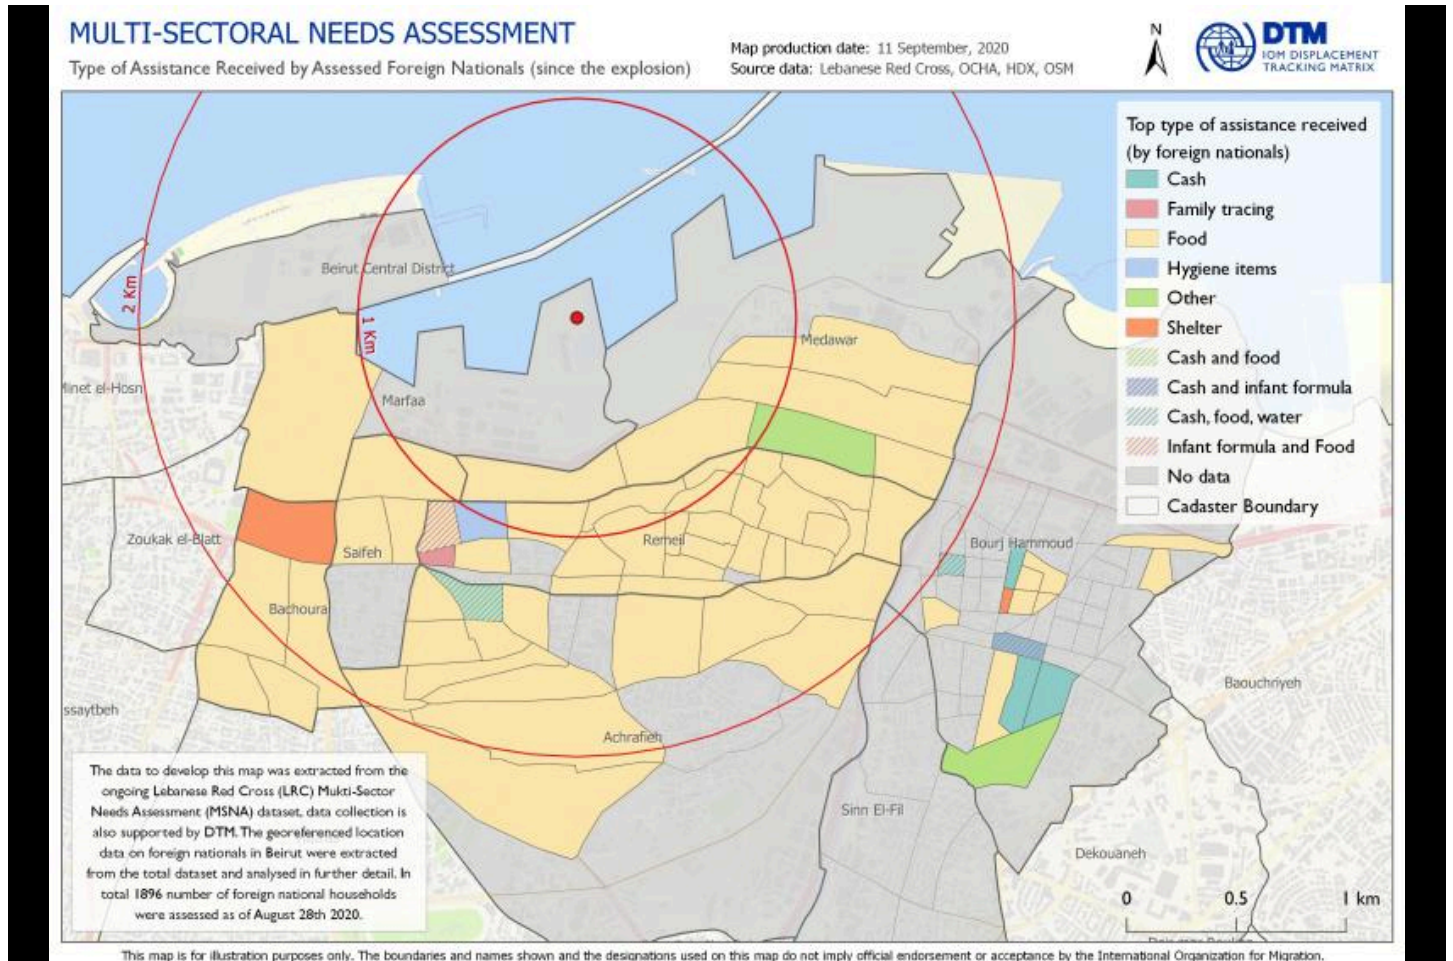

In emergencies, **many organizations** provide relief in many different ways.

Humanitarian emergencies generate **massive amounts of data**.

Volume, tempo, and diversity of the inflowing **information** increases.

The wide range of humanitarian needs, including food, housing, health services, legal aid, interpretation and education, **results in the continuous processing of information**.

Situation Report

Lebanon- Beirut Port Explosion

ISSUE NO. 7

15 OCTOBER 2020

Contact Name: Asma Kurdahi

Situation overview

Almost two months and a half after the Beirut explosion of 4 August, Lebanon finds itself in an increasingly difficult and volatile situation as the country struggles with both political turmoil and a humanitarian crisis. According to the Lebanese Armed Forces, the explosion resulted in 202 fatalities, while 9 people (3 Lebanese, 5 Syrians and 1 Egyptian) are still reported missing.

Already ravaged by the 4 August explosion, 9 October was a frightening day for Lebanon as well. A fire, caused by the explosion of a fuel tank, broke out in Beirut's western neighbourhood of Tariq al-Jadide, resulting in four deaths and more than 30 injuries. On that same day, massive forest fires erupted in several areas across Lebanon, mainly in the

Data collection and processing occurs throughout the response cycle.

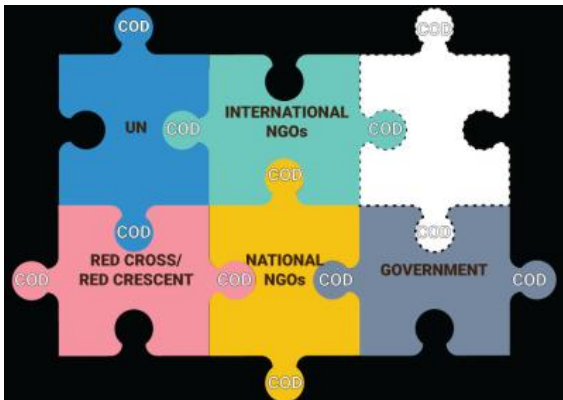

The **exchange of information** is **crucial** to identify needs, prevent gaps in assistance and avoid duplication.

Data are a **central** component of **humanitarian response**: don't let it be a **limiting factor**.

“

Connect to Humanitarian Intelligence: CODs

CODs are the **foundation** to all **preparedness** and **response activities**.

CODs are **key** to building a **coordinated response**.

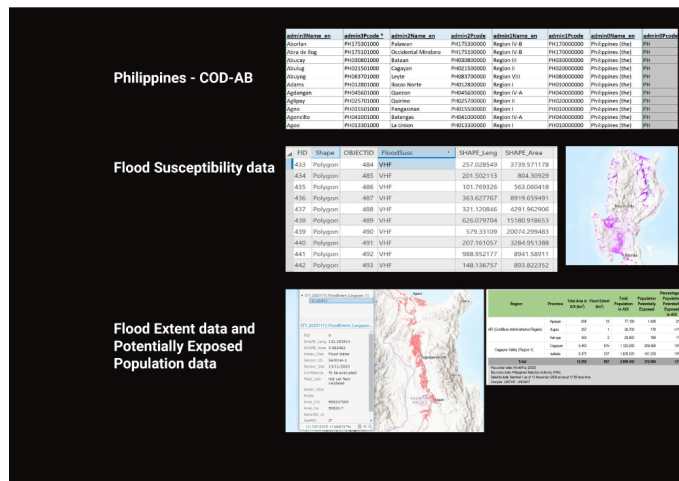

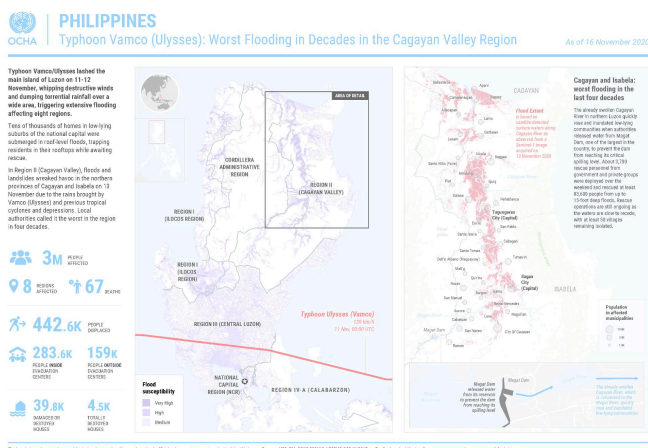

By using CODs, the **humanitarian world** comes **together** to **help crisis-affected people** rapidly receive the humanitarian assistance and protection they need.

Data preparedness & standards

Data preparedness is the first step to **informed decisions** that will ultimately shape the response.

To make **informed, evidence-based decisions** in the first hours/days of an emergency, **processes** to gather, manage, analyse and share data **need to be in place before** a crisis.

DATA BEHIND DECISIONS

An important development in the **systematization of data preparedness** was the **IASC adoption** of “Common Operational Datasets” (CODs), in 2008, revised in 2010.

Common Operational Datasets and P-codes are **the authoritative reference datasets** to support operations and decision-making in the initial response to a humanitarian emergency.

CHECK COUNTRY COD PREPAREDNESS

Unlock the power of humanitarian response

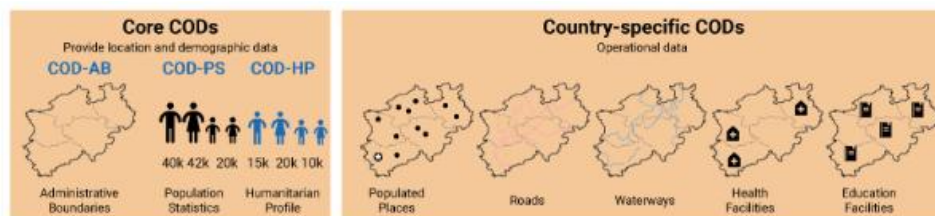

Foundation of preparedness and response activities

Core CODs are **required** in all disaster-prone countries as a **preparedness measure**: they are the **first datasets** used to respond in a humanitarian emergency.

“

CODs = First responders

Common Operational Datasets are **baseline data** that are adopted in country **by partners**.

Facilitate informed decision making

CODs provide **consistency** among all actors, **simplify** the **management of key data** and **enable**:

- a **common operational picture** of the crisis
sharing of data
a geographic **framework** for **data collection, analysis** and **visualization**, through the use of **P-codes** (Place-codes)

Overcome challenges of linking datasets or confirming locations

P-codes are found in **Administrative Boundary CODs (COD-ABs)** and **Population Statistics CODs (COD-PSs)**.

They are **unique** geographic identification **codes**, facilitating the **exchange** and **harmonization** of **data** and information.

When **different** humanitarian actors use the **same** P-codes their work can be **compared, amalgamated** and **harmonized**.

admin1Pcode	admin1Name_en	admin1Name_da	admin1_Pcode	admin1_Name_en	admin1_Name_alt
AF30	Hilmand	هلمند	AF30	Hilmend	Girishk
AF32	Hirat	هرات	AF32	Herat	
AF28	Jawzjan	جوزجان	AF28	Jozjan	Jaozjan Juzjan Jouzjan Shibarghan
AF04	Maidan Wardak	میدان وردک	AF04	Wardak	Verdak Wardag Maiden
AF22	Sar-e-Pul	سرپل	AF22	Sari Pul	Sar-e Pul Saripol

Using **placenames** as identifiers can easily lead to **confusion** over **spelling** and **transliterations** as well as **alternative** and **duplicate** names.

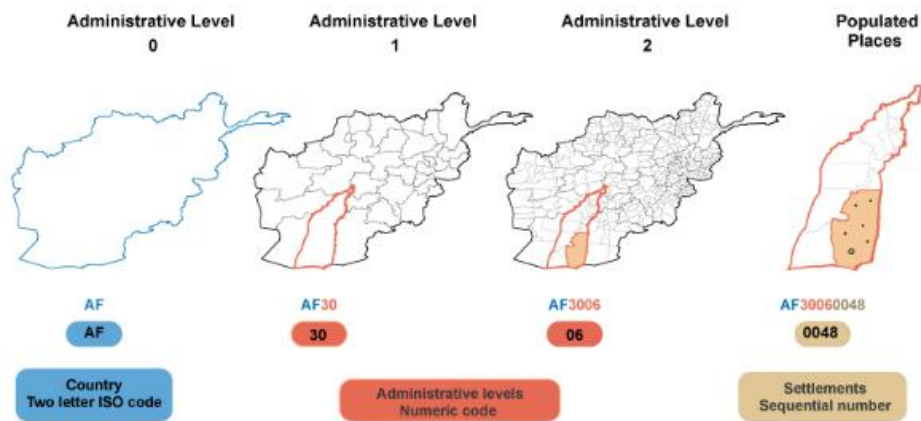

As **unique identifiers**, P-codes **overcome** the challenges of **linking datasets** and **confirming locations**.

P-codes: Unique identifiers

Administrative Boundary CODs (COD-ABs) include **gazetteers** - tables of names and P-codes - that can **organize** humanitarian **assessments** or **responses** even where maps are not required.

P-codes provide the means to **manage** and **exchange** data. They comprise a **unique code** for **each administrative unit** and **populated place**, together with standardised and official spelling.

Databases, spreadsheets and other data sources that **comply** with the **P-code standard** can easily be **combined** and **analyzed**.

P-codes are unique geographic (geo) identification codes, represented by combinations of letters and/or numbers to identify a specific location or feature

P-codes provide a systematic means of linking data to an **unambiguous location**. Using P-codes **avoids errors** caused by geographic locations having the same name or being spelled differently.

“

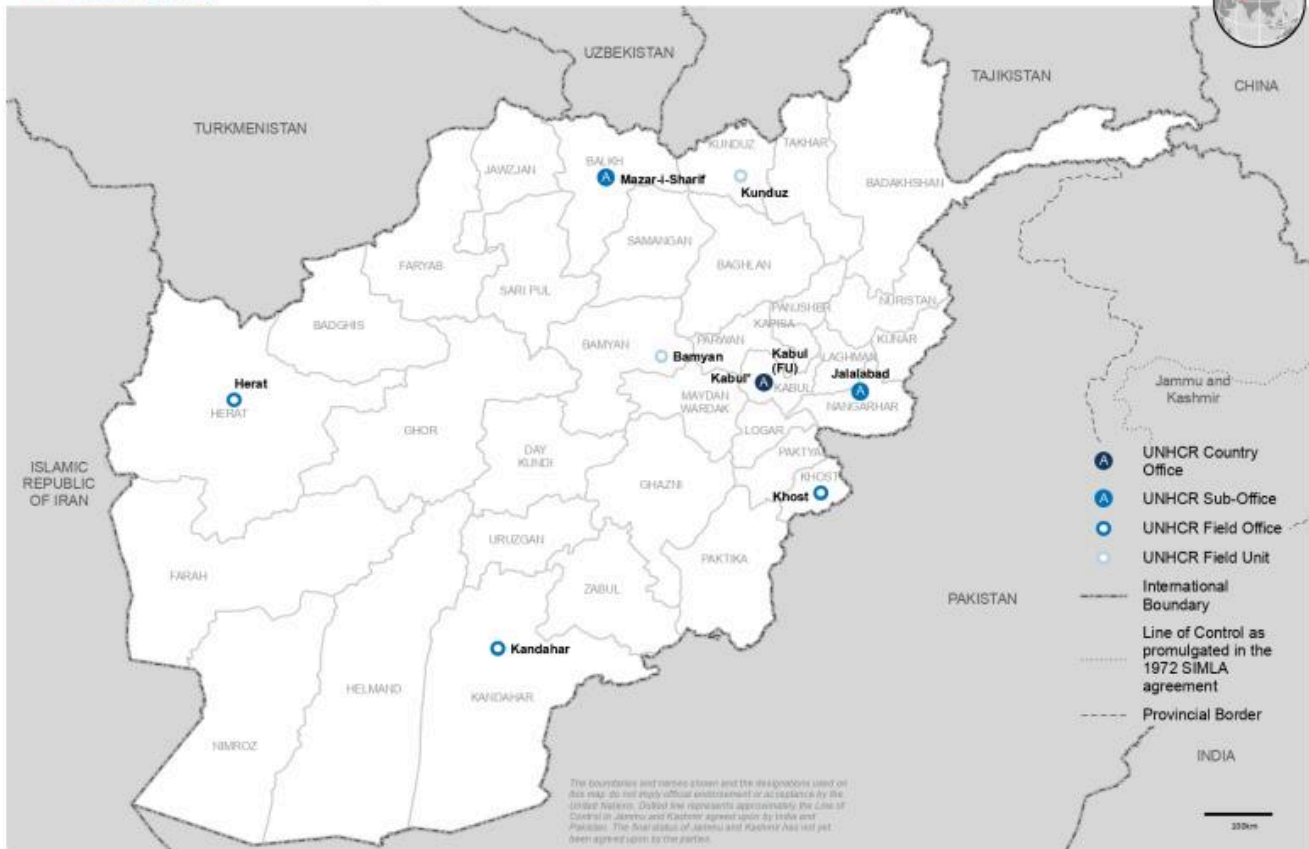

In Madagascar **81** different **administrative level 4** (ADM4) features are called "**Morafeno**". **Six** of these are in **ADM3** features that are **also** called "**Morafeno**" which are only distinguished by being in different ADM2 features!

Built on CODs

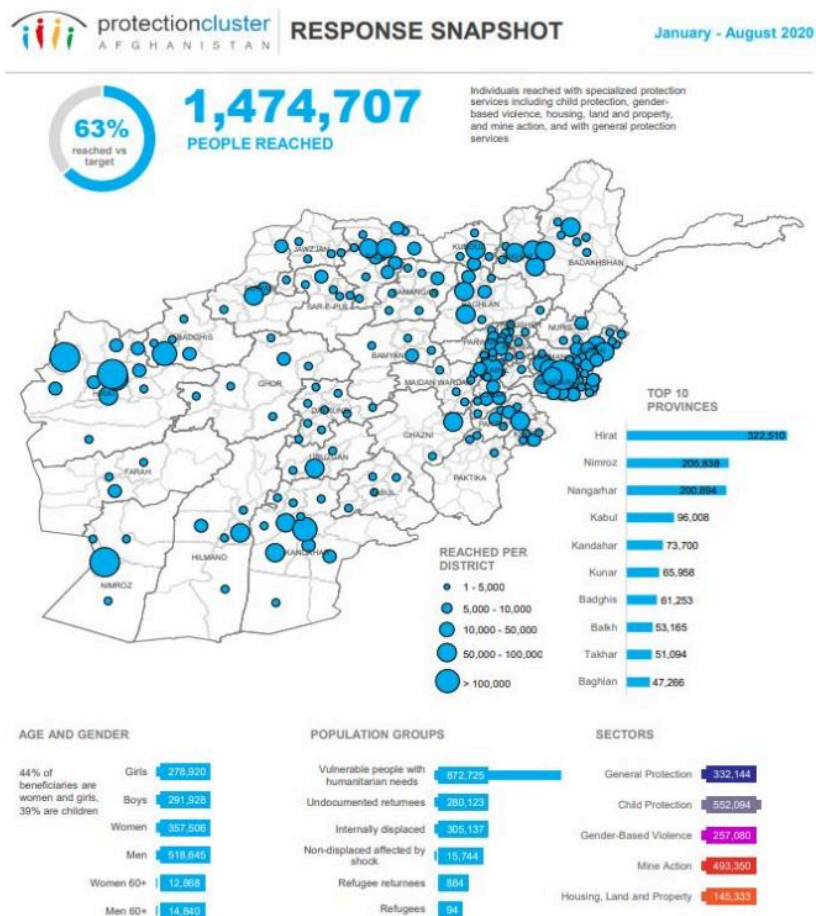

Humanitarian intelligence embedded throughout the reponse

CODs provide humanitarians with a **unique dataset** that:

Serves as a **framework** for **data collection**:

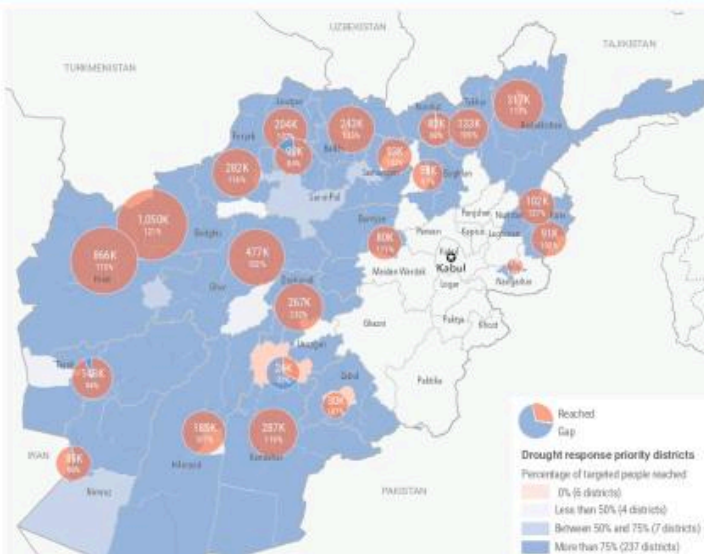

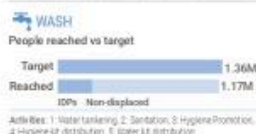

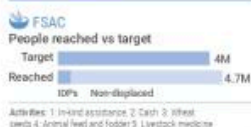

P-codes help organize assessments

As of 30 June, humanitarian partners have reached 5.2 million people affected by drought. Of those reached, 452,500 people are in places of displacement, while the remainder are in drought-affected rural areas. In some drought-affected provinces, insecurity and other access challenges have prevented humanitarian partners from delivering relief items and basic services to those in need.

TARGET VS ACHIEVEMENT

SECTOR PROGRESS

Structure	Confirmed (USD)	Received (USD)	Unspent (USD)
FSAC	\$163m	\$154m	\$139m
EDRP	\$23m	\$23m	\$24m
WASH	\$29m	\$29m	\$22m
NUTRITION	\$7.3m	\$7.3m	\$8m
HEALTH	\$6.5m	\$6.5m	\$6m
PROTECTION	\$3.6m	\$2.9m	\$0.14m
