HDX

Dear HDX Admin,

We are writing to inform you that we will no longer be supporting the Humanitarian Exchange Language (HXL) standard and tools related to the HDX platform.

As of 31 January, we will retire the following:

- **hxlstandard.org** – the HXL standard website
- **proxy.hxlstandard.org** – online data transformation tool for HXL-tagged data
- **HDX Quick Charts** – dataset charts from HXL-tagged data

These changes will have no impact on your organization's data on HDX and no action is required at this time. We will reach out directly to organizations that currently use HXL tags in their HDX data pipelines to discuss next steps but there is no risk that the pipelines will break after removing HXL tags.

HXL is an open standard and will remain available for organizations that wish to continue using it within their internal workflows. The HXL standard was created over ten years ago as a way to combine messy data across spreadsheets. As technology and our humanitarian data ecosystem has advanced, we are exploring new ways to standardize data, improve interoperability and speed up data processing across data sources.

We appreciate your support and remain available to answer questions.

Best wishes,
The HDX team
