EXECUTIVE SUMMARY

The seven year conflict in Liberia claimed the lives of an estimated 150,000 Liberians and displaced more than half the population. The signing of the Extended Abuja Agreement, in August 1996, marked the formal end of the fighting and brought new hope to the civilian population. In accordance with the Extended Abuja Agreement, disarmament and demobilisation was followed by General and Presidential Elections on 19 July 1997. However, despite the considerable progress that has been registered in normalising the political and security environments in Liberia, the humanitarian situation remains a cause for concern. There are still three-quarters of a million persons displaced from their home community. The number of Liberian refugees registered in neighbouring countries stands at just under half a million. At least three-quarters of the pre-war health facilities, as well as between a half and two-thirds of schools, are not functioning. Approximately half of the country remains inaccessible during the rainy season.

Under such circumstances, post-conflict emergency assistance and the consolidation of peace in Liberia are inextricably linked. However, the cardinal challenge is to organise international assistance in a way that will promote the consolidation of peace and assist victims of the war in moving from dependency on relief assistance to increasing levels of self-sufficiency.

The underlying theme of the Appeal is re-integration. The overall improvement in the security

climate during 1997, coupled with efforts by the new government and the humanitarian community to promote resettlement of the displaced, is beginning to bear fruit. Moreover, the vast majority of Liberian refugees in neighbouring countries are expected to be voluntarily repatriated over the next 18 months. All UN Agencies and humanitarian partners have a role to play in the re-integration process, which involves not only resettlement but also the revitalisation of the agricultural economy, the re-establishment of basic health and education services and the restoration of sustainable rural community life. The projects presented in this Appeal to assist resettlement and re-integration are based on a non-targeted, community-based strategy. In this way, humanitarian assistance will also reach vulnerable groups (child soldiers and other war-affected youth, the elderly, the handicapped, female-headed households and children under five years) and the population living in areas where access remain problematic.

Also reflected in the Appeal, is the need to put the Government and people of Liberia in control of the overall recovery effort. In this regard, the Appeal documents the new arrangements in place for humanitarian assistance coordination and outlines the proposals for medium-term funding of the Government's post-war reconstruction plan.

1. INTRODUCTION

1.1 Humanitarian needs and post-war recovery

The objective of this Appeal is to highlight unmet and anticipated humanitarian needs and provide resettlement and re-integration assistance in Liberia during 1998. The time frame for the Appeal is one year and it will dovetail with the Government of Liberia's post-war reconstruction programme which is under preparation and is expected to be launched in the first quarter of 1998. While it is recognized by the UN Agencies and humanitarian community that war-time emergency relief assistance is no longer required, the majority of the Liberian population, in excess of 1.4 million people, remain seriously war-affected. It will be crucial that humanitarian assistance continues over the next year, in order that the delicate process of national reconciliation and recovery can continue, while the new government, with assistance from the UN system, the Bretton Woods institutions, the United States' Agency for International Development (USAID) and the European Union (EU), finalises a medium-term recovery programme and donor funding comes on-stream.

The underlying theme of the Appeal is re-integration. Among the war-affected are 750,000 internally displaced people (IDPs), more than a third of whom currently reside in temporary shelters in the capital city, Monrovia. There are 480,000 Liberian refugees scattered throughout in a number of countries within the West African sub-region. The United Nations High Commissioner for Refugees (UNHCR) estimates that there are a total of 130,000 Sierra Leonean refugees in the western parts of Liberia. Additionally, some 22,000 former combatants need on-going support. The majority of these groups are from the rural areas, the same were devastated by war. During the rainy season (May-November), approximately half of rural Liberia is totally inaccessible due to the lack of road and bridge infrastructure. Schools and health clinics have been destroyed. Water sources are unprotected and unsafe. Agricultural land needs seeds and tools in order to be used productively.

1.2 Historical perspective

The seven year conflict in Liberia claimed the lives of an estimated 150,000 Liberians and displaced more than half the population. One year ago it was estimated that, out of the total pre-war population of approximately 2.3 million (1989), 750,000 were IDPs and 768,000 had taken refuge in neighbouring countries of the sub-region. Well over 1.5 million Liberians were dependant on humanitarian assistance. Most of the country's institutions of civil society, property, infrastructure and productive capacity had been destroyed.

The Extended Abuja Peace Agreement of August 1996, while initially slow in yielding a general cease-fire and disengagement of forces, finally brought positive results. The Monitoring Group (ECOMOG) of the Economic Community of West African States (ECOWAS), together with the United Nations Observer Mission in Liberia (UNOMIL), Department of Humanitarian Assistance's Co-ordination Office (HACO), UN Agencies and non-governmental organisations (NGOs) succeeded in disarming and demobilising 22,000 combatants during the period 22 November 1996 to 9 February 1997. In accordance with the Extended Abuja Agreement, disarmament and demobilisation were followed by general and presidential elections on 19 July 1997. These elections were declared free and fair by international observers. Mr. Charles G. Taylor was elected president, with more than 75 percent of the votes cast in his favour. His party, the National Patriotic Party (NPP), won an overwhelming two-thirds in the legislature. The government emerging from this election was inaugurated on 2 August 1997.

With free and fair elections declared and after the election of the president, the UN Security Council decided that UNOMIL's mission had been successfully completed. At the end of September 1997, four years after its establishment, UNOMIL was withdrawn. However, a United Nations Peace-Building Office will be established in January 1998 to contribute towards the consolidation of peace in the post-conflict period. The final phase of the Abuja Agreement, involving the re-structuring and training of a national army, followed by the withdrawal of ECOMOG, is scheduled for completion by the end of February 1998.

Since the inauguration of the new government, the UN Resident Coordinator along with the UN Agencies have assisted the Government of Liberia in the formulation of the Post-War Reconstruction Programme and strategies for the regeneration of basic services and the re-establishment of local government. In addition, the Bretton Woods Institutions and the African Development Bank have provided assistance to restore effective fiscal management and facilitate the payment of salaries to civil servants. Within the private sector, investors have begun reviewing the environment in a positive light. Major rubber companies have resumed their operations gradually and are expected to reach full-scale capacity during 1998.

1.3 The current humanitarian situation

Despite the considerable progress that has been registered in normalising the political and security environments in Liberia, the humanitarian situation remains a cause for concern. As of December 1997, the situation in Liberia can be characterised in the following terms:

- there remain some 750,000 IDPs, more than a third of which reside in shelters in Montserrado, Bong, Margibi and Grand Bassa Counties. Since March 1997, it is estimated that some 24,000 IDPs left these shelters and returned to the rural areas;
- the number of Liberian refugees registered in neighbouring countries stands at 480,000. It is estimated that some 382,200 will benefit from UNHCR assisted repatriation;
- approximately half of the country remains inaccessible during the rainy season due to destroyed or unsafe bridges and unmaintained roads;
- at least 75 percent of the pre-war health facilities are not functioning. Many of the buildings need repairs. A significant number of the trained health staff of these facilities are among the IDP population;
- between a half and two-thirds of schools are not functioning.

At this juncture, the need is paramount to implement projects of a more sustainable nature, at the community level, and to ensure that these activities dovetail with longer-term development initiatives. In order to enhance stability prior to elections, projects of short duration were implemented by the UN Agencies, EU and NGOs. These projects included renovation of schools, markets, clinics and roads, and provided employment to former combatants. As this phase ends, more emphasis will need to be placed on project sustainability. Accordingly, reconstruction and rehabilitation projects include training, the use of locally available materials and community-based maintenance schemes. The revitalisation of basic social services is viewed as an essential component of repatriation and resettlement. The re-integration of former combatants, who are already civilian members of society, needs on-going support.

Humanitarian assistance is still required by vulnerable groups and the population living in areas where seasonal and road access remain problematic. Vulnerable groups include child soldiers and other war-affected youth, the elderly, the handicapped, female-headed households and children under five years. The anticipated return of IDPs and refugees will be facilitated by increased road accessibility following the end of the rainy season, in addition to the improvement in the security situation. A Plan of Action has been formulated by the Liberia Refugee, Repatriation, and Resettlement Commission (LRRRC) who will manage and monitor the return of IDPs with the assistance of the UN Agencies and the NGOs.

It is expected that the return of refugees and IDPs will, in the short term, increase the level of humanitarian assistance required. There are also other factors which may give rise to an increase in humanitarian needs. Areas that are isolated, because of poor access roads, will continue to need assistance, if the anticipated reconstruction of infrastructure is delayed, particularly if vital repairs are not carried out before the next rainy season. While the security situation has greatly improved, the planned departure of ECOMOG needs to be closely monitored. Any indication of instability or political unrest could influence population movements. Any influx of Sierra Leonean refugees into Liberia, as a result of the renewed conflict in Sierra Leone, would also have a negative impact on the humanitarian situation.

Finally, to facilitate the delivery of both humanitarian and development assistance, as well as ensure aviation safety, the minimum requirements for the re-opening of Robertsfield International Airport are sought, including navigation and communication equipment as well as runway lighting. Throughout the conflict the smaller airport at Spriggs Payne has been used and it is deemed unsafe for use by large planes.

2. THE HUMANITARIAN ASSISTANCE STRATEGY

Peace in Liberia does not mean an immediate end to emergency relief. Post-conflict emergency assistance and the consolidation of peace are inextricably linked. To accomplish this, relief operation strategies developed over the last seven years will be followed while incorporating and adjusting to changes in the landscape brought about by the improved security situation and the presence of an elected government. Some of the basic elements of the relief operation that are expected to continue are:

- maintenance of joint aid policies but with decentralised operations;
- continued and enhanced coordination in the development of an operational frame work among the UN Agencies, NGOs, Donors and the Government;
- maintenance of joint policies on needs assessments and monitoring, particularly in areas that have not been accessed in the past seven years.
- handing over the coordination role to government line ministries and other government bodies;
- facilitating informationexchange on all aspects of the humanitarian assistance and promoting the participation of the government in these interventions;
- attuning the humanitarian assistance to rehabilitation needs and gradually weaning the population from dependency on relief;

Underpinning this strategy is the need to strengthen the capacity of national, regional and local institutions as well as to increase the government's participation and role in programme design and implementation.

2.1 Non-targeted community-based assistance

The concept of non-targeted community-based reconstruction guides the overall *modus operandi* of UN Agencies and NGOs, while acknowledging the need to pay particular attention to vulnerable areas and groups.

The strategy for resettlement and re-integration takes a non-targeted, community-based approach. In this sense, the entire population of Liberia (whether longtime residents, IDPs, or returning refugees) will be treated as a whole for programming and delivery purposes. By focussing on the community, assistance programmes will be better able to address the needs of returning and resident populations and, therefore, promote reconciliation. Nonetheless, certain areas of Liberia are at greater risk and/or suffer from higher vulnerability than other areas. Consequently, the

Department of Humanitarian Affairs (DHA), in collaboration with other UN Agencies, has analysed and mapped risk factors and vulnerability, down to the district level, to inform decision-making on where humanitarian assistance is more appropriate and where more sustainable interventions should be considered. Donors, government ministries, NGOs and UN agencies have all recognised the value of risk mapping. Consequently, the World Food Programme (WFP) and the European Commission's (EC) Aid Co-ordination Office have agreed to take over the management this activity in 1998. See Annex V for the maps and an explanation of the risk factors analysed.

3. THE APPEAL FRAMEWORK

This Appeal is complemented by a number of other important project and programme initiatives.

WFP expects to maintain a total caseload of 1,059,000 beneficiaries during the period covered by the Appeal. WFP programme activities, implemented through local and international NGOs, will include: support to IDPs, refugees and returnees through the provision of food packages; vulnerable group feeding; emergency school feeding; food-for-work and food-for-training, as well as for agricultural development and seeds protection; and other initiatives targeting vulnerable female-headed households. WFP expects to commit 73,957 MTs of food to its programmes during 1998.

Following the completion of the facilitated repatriation phase, in October 1997, UNHCR has started to promote the voluntary repatriation of Liberian refugees. The total population of refugees in the main countries of asylum is some 480,000 persons. It is anticipated that 40,300 will repatriate spontaneously, while 382,200 will be assisted to return home. In addition to being part of this Appeal, UNHCR will issue its own separate appeal in February 1998, describing further details of its repatriation and re-integration activities.

The Government of Liberia will launch its Post-War Reconstruction Programme at a donor round table in New York in the first quarter of 1998. This plan has a two-year time frame and reflects rehabilitation of priority sectors. However, it is expected that significant inflows of external assistance, in support of the reconstruction programme, will be realised only in the second half of 1998. This consolidated Appeal aims to fill a gap before funding for the government becomes available.

3.1 The focus of the inter-agency Appeal

This Appeal is predicated on an overall improvement in the security situation following the success of elections in July 1997. Many of the activities described are non-targeted and community-based in nature. Emphasis has now shifted from humanitarian intervention to reconstruction and sustainable development. The NGO community is developing new strategies to facilitate the shift of emphasis, notwithstanding existing humanitarian needs. During the conflict the NGOs devised a Joint Policy of Operation (JPO) to ensure delivery of assistance. As the climate has changed, that policy has been modified to reflect a focus on development needs and longer term projects.

The over-riding objective of this appeal is to address unmet humanitarian needs and to assist in resettlement of IDPs and repatriation/re-integration of Liberian refugees. These activities are also seen as essential, among other things, to avert potential unrest and political instability. Furthermore, it is essential to address the capacity of both Government and local non-governmental agencies to facilitate the relocation of IDPs, which is the responsibility of LRRRC.

3.2 The nature of the appeal and the joint approach

This consolidate Appeal is the product of contributions and consultations with the Government of Liberia, UN agencies, NGOs and International Organisations (IOs). Recourse to the services of the United Nations Volunteers (UNV) will be made upon request by individual agencies, as needs arise. The International Committee of the Red Cross (ICRC) and the International Federation of Red Cross and Red Crescent Societies (IFRC) have also contributed to the appeal through Annex II and Annex III, respectively, of this document.

As the need for humanitarian interventions has decreased, re-integration support and peace building has become a priority. These needs include the strengthening of civil governance, re-integration of the war affected population, and the repatriation and resettlement of refugees and the internally displaced. It also includes the restoration of sustainable rural community life and the social re-integration of all conflict-affected groups.

3.3 Appeal objectives

The project summaries in this Appeal are inter-related and mutually re-inforcing interventions each of which support the eventual social re-integration of the various conflict-affected groups and the consolidation of civil authority throughout the country.

The projects aims to promote the return of IDPs and refugees as well as to meet the needs arising from improved security and accessibility. It also aims to expand rehabilitation activities for basic services, which will also act as an incentive for IDPs and refugees to return home. These activities are implemented in co-ordination with UNHCR and WFP.

3.4 Beneficiary profile

Liberia's population is marked by a relatively large proportion of young people. An estimated 54 percent of the population is below 20 years of age. Particularly, ages 0-14 comprise 43.1 percent, while the zero to nine age group represent 32 percent. Senior citizens, those 65 years and above, account for 4.2 percent of the population. A large proportion of the female population (46 percent) are of reproductive age (14-49). Contraceptive prevalence rate is low, estimated at below 5 percent with wide variation between the urban and rural areas. Morbidity incidence and prevalence rates in the population are very high. Review of out-patient morbidity statistics show that malaria, diarrhoea, acute respiratory infections, neonatal tetanus, measles and malnutrition are the major causes of morbidity. In 1986, infant mortality was 144/1000 live births, children mortality 89/1000 live births and under-five mortality 220/1000 live births (LDHS, 1986). The common causes of

infant mortality are malaria, diarrhoea, acute respiratory infections, measles, and malnutrition.

The overwhelming desire of those returning home and of the former combatants is for education. In the case of the former combatants, data gathered during demobilisation indicates that the majority are male between the ages of 15 and 30. Eighty four per cent have attained some degree of schooling at least as far as the elementary level. Very few have farming experience and most wish to return to Monrovia and attain either formal education or vocational and skills training. In the case of children combatants, most are between the ages of 13 and 17 years and a large proportion were combatants for five or more years. Very few have had any formal education and almost all expressed their intention to go to Monrovia to pursue schooling.

It is estimated that a total of 382,200 refugees will return to Liberia with the assistance of the UNHCR repatriation programme. Among them, statistics collected by UNHCR clearly show an eagerness to return to school. For example, out of a total of 160,000 in zone "d'accueil" in Côte D'Ivoire, almost 50 percent favour education on return as opposed to 15 percent who have aspirations for farming.

Since March, upwards of 24,000 people have left the IDP shelters in Montserrado, Bong, Margibi and Grand Bassa Counties and returned to the rural areas where schools and some basic services have been re-established. Those that have not moved spontaneously will benefit from assistance with transportation. It is also recognised that a certain percentage will remain in the urban centres. Project summaries in this Appeal indicate assistance to this category.

Within the community in general, including the returnee population, it is estimated that 10-20 percent can be considered vulnerable and in need of additional support. This group includes child soldiers and other war-affected youth, the elderly, handicapped, female-headed households and unaccompanied minors.

4. CO-ORDINATION

During the crisis years, UN-HACO was responsible for the coordination of humanitarian assistance, including the demobilisation of ex-combatants. In its coordination capacity, UN-HACO provided a central point where all NGOs, Donors and UN Agencies could exchange information, address policy issues and meet challenges arising from the crisis. At the height of the factional fighting, UN-HACO facilitated access across factional lines and also addressed, through pro-active media services, criticism being leveled against the humanitarian community. These media activities served to enlighten the public about the role of the humanitarian community in meeting the Liberian people's needs. Advocacy was also a key component of the UN-HACO co-ordination function where it upheld the principles of humanitarian operations as well as other universal rights of the people. UN-HACO also developed a database of humanitarian activities and undertook risk mapping that indicates which districts require continued or increased humanitarian assistance and which districts are ready for rehabilitation activities.

Earlier, the UN agencies and NGOs expressed a need for co-ordination to continue in the post-complex emergency period. This co-ordination mechanism is envisaged to be modest and tailored to the needs of the humanitarian community. It will be independent from any other UN Agency, operating under the supervision of the Resident Coordinator and accountable to the humanitarian community. The unit, proposed to be known as Relief Co-ordination Unit (RCU), will monitor and increase collaboration with the government in a way to facilitate its eventual assumption of that responsibility. Furthermore, it is envisaged that other necessary functions of UN-HACO that cannot be undertaken by the reduced co-ordination mechanism will be absorbed by other UN bodies. For example, the Department for Development Support and Management Services (DDSMS) will maintain the humanitarian database within its Geographical Information System (GIS) while WFP and the EU have expressed their interest to continue the risk mapping programme.

5. PRIORITY AREAS

To best address current humanitarian needs in Liberia, the UN Sgencies participating in this Appeal have identified the following priority areas for support:

- Resettlement, Repatriation, Re-integration and Shelter
- Food Production, Food Security and Food Aid
- Health
- Education
- Children in Especially Difficult Circumstances
- Skills Development and Job Creation
- Water and Sanitation
- Coordination, Monitoring and Information

Each of the priority areas are considered in more detail below.

5.1 Resettlement, repatriation, re-integration and shelter

As noted earlier, the war-affected population of Liberia is estimated to be in excess of 1.4 million people. This figure includes approximately 750,000 IDPs and 480,000 refugees throughout West Africa. In addition, some 22,000 former combatants require support for them to be re-integrated into the community. Most of those affected originate from rural areas. A large proportion of IDPs and refugees have indicated their willingness to return to their villages. However, some will continue to live in the urban centres where assistance will be required to ensure appropriate assimilation. During the appeal period, the following priorities have been identified:

- The resettlement, in their areas of rural origin, of some 270,000 IDPs from shelters in Monrovia and its environs. Basic resettlement packages, including food and shelter, will be provided to 52,363 families, together with seeds and tools through the national seeds and tool campaign.

- The repatriation of 480,000 refugees with UNHCR assistance.
- The revitalisation of basic social services, including health and educational facilities, in some 3,000 villages
- The provision of tools and other equipment to as many as 2,000 small towns and villages in order to assist them in absorbing the returning population.
- The funding of vocational training and skill development for some 4,000 people in order to generate new employment opportunities, and in so doing, contribute towards stability within the community.
- Support to capacity-building interventions on infrastructure, housing and services in preparation for the government's medium-term Post-War Recovery Programme.

Liberian refugees

There are currently some 480,000 Liberian refugees in Guinea (235,000), Côte d'Ivoire (210,000), Ghana (15,000), Sierra Leone (14,000) and Nigeria (6,000). In 1996, UNHCR's efforts to repatriate Liberian refugees had to be aborted as a result of resumed fighting and a further destabilisation of the region. However, renewed hopes for voluntary repatriation of Liberian refugees emerged in early 1997 when the disarmament/demobilisation exercise was successfully completed and the security situation in Liberia improved significantly. Subsequently, UNHCR decided to facilitate the return of those Liberian refugees who wished to return prior to parliamentary and presidential elections. The first 92 repatriates departed with UNHCR assistance from Sierra Leone in early May 1997, followed by some 10,000 others from the main asylum countries. Tens of thousands of Liberians repatriated spontaneously before and after the elections.

Significant advances in the peace process and security situation became evident for example through the conversion of various factions into political parties or the presence of ECOMOG troops and UNOMIL observers throughout the country. The elections were held in this climate on 19 July 1997, and international observers judged them free and fair. Mr. Charles Taylor was inaugurated as President of Liberia on 2 August 1997. A regional meeting convened by UNHCR in September 1997 in Abidjan, Côte d'Ivoire, took stock of the situation and developments in Liberia and concluded that the time had come to move from facilitated to promoted (large scale, organised) repatriation as had been UNHCR's contingency plan since March 1997.

Over 30,000 Liberian refugees in the main countries of asylum have already registered or expressed willingness to repatriate under the promotion phase. Registration exercises and promotion campaigns informing about the general situation in Liberia and direct and indirect assistance provided to repatriants are being expanded, and the pool of registered potential repatriants is expected to increase quickly. A declaration on the rights and security of Liberian returnees was signed by President Taylor on 27 October 1997. Senior officials of the LRRRC and the government Department responsible for the co-ordination of the Repatriation and Re-integration Programme, have already started visiting asylum countries for sensitisation campaigns. UNHCR carried out two workshops in Guinea and Ghana for those involved in the voluntary repatriation operation such as government officials, implementing partners and UNHCR staff, and another regional workshop is planned in Liberia for early 1998. Two UNHCR sub-offices have been opened

in Voinjama (Lofa County) and Gbarnga (Bong County) while field offices in Zwedru (Grand Gedeh County), Harper (Maryland County) and Vahun (Lofa County) are being established, albeit under severe constraints in terms of road accessibility. These offices will be closely monitoring the returns to ensure the safety and dignity of the returnees. At the same time, the teams will co-ordinate, monitor and implement the re-integration activities. Finally, the first movements under the promotion phase took place in December 1997 with some 800 Liberian refugees returning home from Côte d'Ivoire, Ghana and Nigeria.

As outlined in UNHCR's recent progress report on the Liberian repatriation operation (published in October 1997), having completed all preparatory activities by the end of 1997, UNHCR expects to run a full-fledged voluntary repatriation operation during the year 1998, while the re-integration phase in Liberia would be completed by the end of June 1999.

The financial support being sought in this Appeal for the voluntary repatriation and re-integration of Liberian refugees covers activities to be implemented in countries of origin and asylum during 1998. UNHCR will review its 1999 financial requirements during 1998 based on the implementation level of the programme.

Resettlement

The first half of 1998 will see the relocation exercise and the physical transportation of people home. While UNHCR has its plan of action for the repatriation of Liberian refugees, LRRRC also has a plan to assist the IDPs in returning home, which will harmonise with that of UNHCR. From initial statistics, it is believed that across the board between IDPs and refugees, at least 50 percent will require transportation. That 50 percent include those considered vulnerable, and therefore unfit to travel on their own, and/or those travelling long distances. While refugees will receive assistance from the UNHCR programme, the IDPs will receive support through the LRRRC's modest resettlement package, composed of one two-month food ration and one plastic sheet per family.

All returnees and the resident community will require basic social services. Basic health clinics and school facilities will be renovated to ensure that the community is enhanced rather than burdened by the returning populations. For this reason UN Agencies, IOs and NGOs will continue to implement micro-projects to ensure that minimal community services are in place. The International Labour Organization (ILO) through its training schemes to teach self-employment skills will enable those former combatants and war-affected youth to resume productive lives. Micro-projects to establish income-generating activities will also absorb those without sources of livelihood. This project will be monitored and a database established to facilitate longer-term aspects of skills training and employment creation. Projects are to be implemented through NGOs and support to the Ministry of Labor will ensure monitoring and follow-up.

In addition to the assistance provided to relocation such as transport and food, returnees will benefit from the distribution of seeds and tools, which is a component of the revitalisation of the agricultural sector. This sector was badly affected during the conflict. Large-scale displacement resulted in the abandonment of land, loss of tools, seeds and cuttings.

To address capacity-building for the longer-term delivery of community-based housing and infrastructure services, the United Nations Centre for Human Settlements (UNCHS/HABITAT) will carry out a series of on-

the-job training programmes in Monrovia and other urban areas throughout the country. Training will emphasise the use and improvement of locally-produced building materials, in addition to supporting small-scale contractors. This training will build the capacity of small contractors, so that they are able to rehabilitate schools and health facilities in urban areas, and renovate public buildings. The projects will generate employment and income for vulnerable groups. Local authorities, local NGOs and Community Based Organisations (CBOs) will also undergo training to augment local capacity in addressing the rehabilitation and reconstruction of human settlements. There will be a special focus on the training of elected leadership (i.e., councillors) to enhance strategic decision-making within local authorities.

Community sensitisation is an important aspect in the resettlement of people. To reduce tensions and encourage harmony, public information through the media is necessary. Confidence-building is needed to ensure that both refugees and IDPs feel secure in returning home. LRRRC in its Plan of Action will adopt such an approach using radio, newspapers and drama.

Other UNHCR assistance programmes in Liberia

UNHCR will continue to provide multi-sectoral assistance to an estimated 130,000 Sierra Leonean refugees living in Lofa, Monteserrado, Cape Mount, Bomi and Bong Counties, as well as to some 100 urban refugees of various nationalities living in Monrovia, pending their durable solutions to their situation. UNHCR's financial needs for 1998 for this caseload will be covered under UNHCR's general programme, thus they are not presented under this Appeal.

UNHCR	
Programme for repatriation and re-integration of Liberian refugees from main countries of asylum (Côte d'Ivoire, Ghana, Guinea, Nigeria, Sierra Leone) and elsewhere	US\$ 38,235,194
Programme for returning Liberian refugee children and adolescents*	US\$ 2,000,000
* UNHCR, in addition to its global re-integration activities, is prioritising efforts for returning Liberian refugee children and adolescents, in collaboration with the United Nations Children's Emergency Fund (UNICEF). UNHCR takes primary responsibility for ensuring safe return and re-integration of Liberian refugee children and adolescents in the context of immediate post-conflict reconstruction. This will complement UNICEF's longer-term initiatives on behalf of war-affected children.	
UNDP	
Support to IDPs (LRRRC)	US\$ 1,316,000
Skills development and job creation (ILO)	US\$ 1,790,000

Training of trainers for elected leadership (UNCHS)	US\$ 270,000
Training for community-based human settlement reconstruction (UNCHS)	US\$ 1,000,000
Capacity building for the effective delivery of housing, infrastructure and social facilities (UNCHS)	US\$ 1,500,000
Micro credit for poverty alleviation (UN DDSMS)	US\$ 460,000
Geographic Information System (UN DDSMS)	US\$ 350,000
Reactivation of Roberts International Airport International Civil Aviation Organisation (ICAO)	US\$ 2,793,670
IOM	
Transfer of qualified human resources	US\$ 2,500,000
UNICEF	
UNICEF will facilitate, in collaboration with UNHCR, the re-integration of children and adolescents into their communities through an improvement in basic services in the four counties of Bong, Lofa, Nimba and Montserrado. These projects are described under the relevant sectors:	
Health	US\$ 3,637,000
Education	US\$ 2,588,000
Water and sanitation	US\$ 2,000,000
Children in especially difficult circumstances	US\$ 380,000

5.2 Food production, food security and food aid

Food production

Loss of productive assets, destruction of markets and the continuous displacement of people have severely affected the entire agricultural sector. Production of the major food crops, rice and cassava dropped to 23 percent and 50 percent of pre-war levels, livestock was decimated and access to fish resources drastically reduced. Delivery of support services was impeded and eventually discontinued.

For several years, the major interventions in the sector have emphasised the emergency supply of inputs, mainly seeds and tools. This programme was supported by the EU, USAID/Office of Foreign Disaster Assistance (OFDA), United Nations Development Programme (UNDP), Food and Agriculture Organization (FAO) and implemented by a number of international and national NGOs. This assistance has resulted in the considerable increase in crop production which was achieved during the past one and half years of relative stability in the rural areas. The total cultivated area, however, is still an estimated 30-40 percent lower than in 1988. Largely due to farmers still being displaced, shortage of farm inputs remained a problem in inaccessible areas.

In light of the large numbers of refugees and IDPs expected to return to their villages during 1998, provision of inputs will continue to play a vital role in identifiable high risk areas. The requirements will also be determined by the degree to which farmers in to date inaccessible areas have coped without assistance.

In order to effectively respond to the considerable regional variation in vulnerability levels, the proposed projects address the production shortfall with emergency as well as rehabilitation interventions, and are complemented by assistance to the Ministry of Agriculture (MoA).

Accordingly, better performance of the agricultural sector is to be achieved by:

- ensuring the access to inputs;
- increasing the productivity;
- strengthening the co-ordination and planning capacity;

Major complementary NGO activities

In addition to being implementing partners of the national seed and tool campaign, Action Contre la Faim (ACF), Africare, Catholic Relief Services (CRS), World Vision International (WVI) and Lutheran World Federation/World Service (LWF/WS) are operating a number of agricultural projects. These include swamp development, vegetable gardening, multiplication of seeds and planting materials, cash crop rehabilitation and the provision of rice mills. The EC supports the sector through the tree crop reclamation, swamp development and vegetable gardening components of the Resettlement and Re-integration Programme. The UNOPS community rehabilitation programme includes agricultural micro-projects. In collaboration with UNHCR, (German Technical Cooperation (GTZ) is involved in swamp development.

FAO	
Farm inputs for vulnerable farmers, the repatriated and resettled IDPs	US\$ 1,750,000
Multiplication and testing of quality rice seed	US\$ 531,000
Rehabilitation of agricultural blacksmithing and manufacturing	US\$ 332,000

Assistance in root and tuber crop multiplication and processing	US\$ 326,000
Support to artisanal fishing and fish processing	US\$ 373,000

Food aid and food security

Despite the increase in food production that has been registered, the fact that the majority of the Liberian population is still uprooted and unemployed has hampered significant progress toward stable levels of food security in Liberia. The continued presence of IDPs and refugees in Monrovia and in neighbouring counties will detract from efforts to improve agricultural production and food security in the country. Hence, the WFP strategy during the appeal period will be pro-active. The role of food aid will be to encourage and facilitate IDPs' and refugees' return to their communities of origin, and to assist them to rebuild their lives and assets. It is envisaged that the availability of food will not only reassure returning populations that their basic needs will be met until they are able to become self-supporting, but also will support other sectors engaged in repatriation, resettlement and rehabilitation activities.

In September 1997, WFP, UNHCR, donor representatives (EU, USAID) and major implementing partner NGOs agreed upon a food aid strategy programme to support the resettlement of IDPs and in the repatriation of refugees to Liberia. The programme covers the period 1 January 1998-30 June 1999. The specific objectives of the food aid strategy are:

1. To make food available for returnees' journey home, as a way to support their safe return to places of origin.
2. To support, in coordination with UNHCR, the repatriation and re-integration into Liberia of refugees from the main countries of asylum.
3. To assist IDPs and refugees to rehabilitate their home areas and reconstruct viable local economies.
4. To meet the basic food needs of the most vulnerable groups and individuals, and ensure that malnutrition is kept at a minimum during the transition from emergency to rehabilitation.
5. To rebuild and re-open schools, and encourage children to return to classes.
6. To promote food-for-work projects to rehabilitate agricultural land, clear bush overgrowth, reopen roads, and reconstruct community installations.
7. To support simple vocational training in order rapidly to provide male and female workers with the basic skills required to rehabilitate their communities.

8. To provide food on a one-time basis to farmers who receive seeds, in order to ensure that seeds distributed are sown and not consumed.

In Liberia, food aid will support 1,059,000 beneficiaries, out of which 737,000 will be assisted by WFP and 322,000 by CRS. It should be noted that this total figure necessarily reflects some multiple counting, as some beneficiaries initially targeted under one programme will later be supported under one or more other programmes. Specific activities to be supported by food aid are: IDP resettlement, refugee repatriation and re-integration, therapeutic feeding, vulnerable group feeding, emergency school feeding, food-for-work, food-for-training, food-for-agriculture, and food-for-seed protection. Repatriation and resettlement packages are aimed at tiding beneficiaries over until they are incorporated into the various targeted programmes upon return to their home areas. The repatriation and resettlement packages will support a caseload of up to 714,000 beneficiaries (both IDP and refugee returnees), of whom 604,000 will be served by WFP and 110,000 by CRS.

The implementation of the programme will be based on the division of responsibilities already agreed upon by WFP, UNHCR, and national and international NGOs in their respective memoranda of understanding, and with the Government of Liberia and governments of the host countries. In-country, WFP, CRS, UNHCR and donors will continue to coordinate food aid strategy and activities for Liberia through the Committee on Food Aid. The UN-HACO-developed inter-agency vulnerability mapping system will be built upon and is expected to provide a key basis for planning WFP targeted interventions in 1998-99.

The total food requirement in Liberia for 1998 is estimated to be 109,576 MTs, of which 73,957 will be supplied by WFP and 35,619 by CRS.

Targeted food assistance for resettlement of IDPs and repatriation of Liberian refugees from Guinea, Côte d'Ivoire and Ghana.	
Targeted food assistance to Liberia:	Food commodities: 73,957 MTs

5.3 Health

Objectives

1. To rehabilitate health infrastructure, in order to revitalise primary health care in areas of high IDP and refugee return.
2. To strengthen community-based health activities, as a mean of reducing morbidity and mortality caused by cholera, tuberculosis (TB), acute respiratory infection (ARI), pregnancy complications, as well as vaccine and other preventable diseases.
3. To re-establish disease surveillance with laboratory support system in four counties with a high return of IDPs and refugees.
4. To contribute towards the deployment of trained health workers in support of the revitalisation of Primary Health Care (PHC) services.
5. To upgrade reproductive health services (including family planning and sexual health) in order to reduce the incidence of maternal mortality and morbidity arising from pregnancy and birth delivery-related causes.

Summary

Prior to the conflict, health facilities were provided by government and private institutions. However, out of the 360 government and private pre-war health facilities, only 25 percent are currently functioning. The flight of medical specialists from the country worsened the physician-population ratio. Furthermore, a recent country-wide assessment by the Ministry of Health revealed that, during the conflict, trained health workers and village health workers have vanished. Epidemics of diarrhoea, cholera and measles are frequent occurrences in many parts of the country. TB, whose number of cases has significantly increased since the civil war, continues to be a major public health problem in Liberia. At the present rate of four cases per thousand, it is estimated that there are over 9,600 TB cases in a national population of 2.3 million.

The health condition of returning IDPs and refugees requires considerable attention. Therefore, special efforts are needed to support district and community-level health activities through minor renovations and rehabilitation of infrastructure, new equipment, regular supplies of essential drugs and vaccines, up-grading of the cold-chain, capacity-building through training, and community mobilisation for health care development and disease surveillance. Efforts will be made also to identify and redeploy health workers to rural areas. A conducive work environment will be created to motivate the health workers to accept redeployment assignments.

Other projects will focus on improving reproductive health. Interventions aimed at the prevention and control of Sexually Transmitted Diseases (STDs) and Human Immunodeficiency Virus (HIV)/Acquired Immuno-Deficiency Syndrome (AIDS) are also featured.

WHO

Support to PHC activities	US\$ 598,900

Revitalisation of 50 health clinics and 6 referral centres	US\$ 3,637,000
UNFPA	
Strengthening the delivery of integrated reproductive health services in at least two counties	US\$ 810,000

5.4 Education

The damage suffered by the educational system during the seven-year civil war has been extensive. The dilapidated appearance of most public schools is an accurate reflection of the education system as a whole. Out of the 1,440 public and self-help community schools that functioned before the start of the war, it is estimated that only 500 to 800 are functional again. But the scars go well beyond the physical infrastructure. Poorly trained, under-qualified and untrained teachers continue to manage classes without textbooks or chalk. Students have to try and memorise the lessons that are dictated or explained by the teacher. Classes are without furniture and students sit on the floor, stooped over their notebooks and slates.

In the past six months, a start-up package of educational supplies has been provided to all functional schools and some textbooks are currently being printed to service 240,000 primary school students. A total of 1,700 teachers have benefitted from short-term in-service training courses on classroom management, pedagogy and teaching methods, as well as peace education and conflict management.

These activities have gone some way towards alleviating the immediate pressures and providing a structured learning environment for resident populations in urban and accessible rural areas alike. The anticipated return of refugees and IDPs will put unprecedented pressure on the functioning schools. Conversely, the lack of functioning schools in areas of intended return and resettlement is likely to strongly influence the parents' decision to return or not.

In order to restart the education system and support the resettlement and re-integration effort, the following priority areas will be addressed during the appeal period for an additional 500 public primary schools:

- minor rehabilitation of public primary schools ;

- training of teachers;
- educational supplies;
- additional textbooks for grades one to six.

Particular emphasis will be placed on districts and counties with large returning populations and low present coverage. In the medium-term, it is expected that pre-service teacher training, evaluation, and curriculum development will be strengthened within the purview of the central Ministry of Education while service delivery and supervision will be delegated to the county education offices.

In addition, Population and Family Life Education (POP/FLE) will be integrated into the school curriculum in order to promote the development of responsible parenthood attitudes and behaviour on reproductive health and population issues among future adults of Liberia's population. Commencing in five counties, it will gradually be extended nation-wide.

Major complementary NGO activities

International Rescue Committee (IRC) manages schools in Guinea for refugee children while the Adventist Development and Relief Agency (ADRA) does the same for Liberian refugees in Côte d'Ivoire. In addition, Church-Related Educational Development Organization (CREDO) and Pingstmissionens U-landshjälp (PMU) Interlife provide logistical assistance for the distribution of textbooks and educational supplies.

School renovation and furniture construction	US\$ 800,000
UNFPA	
Strengthening of POP/FLE in Liberian schools and colleges	US\$ 361,822

5.5 Children in especially difficult circumstances

A total of 4,301 children were registered during the disarmament and demobilisation exercise of early 1997. The large majority of these children were immediately reunited with their

families. Some were directed towards transit homes until their families were traced and reunification took place.

These, and all other war-affected youth, are active participants in a number of re-integration programmes that combine psycho-social counseling, vocational skills training and placement assistance. An estimated 6,000 youth are currently engaged in these programmes.

Such programmes have been very effective in de-traumatising and re-integrating older children. An even larger majority of children cannot and should not join the labour market. These are pre- and early-teenagers who did not have a chance to attend regular school during the seven-year war. They are mostly illiterate and are too old for a normal cycle. No less than 80 percent of all demobilised children indicate that they would like to return to school.

In order to complement the successful vocational training programmes under way, the Appeal identifies the following priority areas to reintegrate this special group of children:

- develop an accelerated formal education programme;
- develop methodologies and test standards to quickly mainstream these older students into their normal age group.

In the medium-term, it is expected that such accelerated formal education programme would re-integrate between 5,000 and 15,000 children within a two to three year period, in normal school system.

Major complementary NGO activities

A number of national and international NGOs are currently providing re-integration services to ex-combatants and other war-affected youth throughout Liberia. These include the Children's Assistance Programme (CAP), the Sustainable Development Promoters (SDP), the Community and Human Development Agency (COHDA), the Save the Children Fund/United Kingdom (SCF/UK), Don Bosco, Loic, and Calvary Chapel. In addition, ILO and Loic provide similar services to adult ex-combatants while the National Women's Coalition of Liberia (NAWOCOL) supports the re-integration of women.

UNICEF	
Accelerated formal learning for older students	US\$ 380,000

5.6 Water and sanitation

Before the civil war, only an estimated 12 percent of all Liberians had access to safe drinking water, while 2 percent had access to proper sanitation.

The war has significantly eroded this already low supply of safe water and sanitation. During the emergency, emphasis was put on placing water and sanitation facilities in areas where displaced people had gathered. While this may have satisfied the immediate needs of the time, it also has contributed to skewing access more strongly towards the urban areas of Montserrado and Grand Bassa counties, namely Monrovia, Buchanan and the Monrovia-Gbarnga corridor.

With the return of peace and the prospects of the return of IDPs and refugees to their original homes, improved access to safe drinking and proper sanitation remain a critical factor in reducing morbidity and mortality from diarrhoea and water-borne and environmentally-related diseases.

In this respect, the Appeal proposes to put an additional emphasis in the counties and districts where an estimated 87 percent of the returning population is expected. These counties include Montserrado, Bong, Lofa, Nimba, Grand Gedeh and Maryland. Within these counties, under-served districts with large returning populations will be given priority. In order to provide access to clean water and safe disposal of excreta, the following priorities will be addressed within the Appeal period:

- the construction or rehabilitation of 500 wells equipped with hand pumps;
- the construction of 7,050 latrines;
- the chlorination of all existing wells;
- the training of village hand pump mechanics.

Major complementary NGO activities

A large number of NGOs (international and national), as well as CBOs are involved in garbage disposal, the construction of wells and latrines as well as in health and hygiene education. These include ACF, SCF/UK, OXFAM, Concern Worldwide, IFRC, Liberian National Red Cross Society (LNRCS), Tear Fund, Environmental, Civil and Mining Projects (ECMP), ICRC, Community and Human Development Agency (COHDA), Liberians United to Serve Humanity (LUSH), Water and Environmental Sanitation Agency (WESA), and Pocal.

A set of guidelines and standards were recently developed by the Ministry of Rural Development with the assistance of the Water and Sanitation Coordinating Committee. These guidelines will serve as a common reference for standards of quality and process in the future.

UNICEF	
Safe water supply and improved sanitation	US\$ 2,000,000

5.7 Coordination, monitoring and information

In previous appeals, humanitarian needs were large and a corresponding co-ordination mechanism was put in place. At this juncture, with the overall improvement in the country and the increased stability, the need for such a co-ordination mechanism has diminished. It is now crucial to integrate the co-ordination of humanitarian assistance and re-integration activities as the focus for intervention becomes more community-based. Recognising vulnerable groups and areas will still be important and the information provided by risk mapping, the humanitarian activities database and the Geographic Information System (GIS) will assist in this process. Complementary efforts are also proposed by World Health Organisation (WHO) in disease surveillance, by FAO in food security and by United Nations Fund for Population Activities (UNFPA) in demography and health.

Liberia had its last national population and housing census in 1984, followed by a survey of Monrovia and its environs in 1991. Considering the significant loss of lives and movements of the population arising from the seven years of civil war, it is acknowledged that the results of these exercises are no longer useful for development planning purposes. Thus, at present, one of the most urgent needs of Liberia is reliable demographic and related socio-economic data. In the short-term, it is therefore proposed that UNFPA supports the Government of Liberia in conducting a national Demographic and Health Survey (DHS) to generate this data.

With the closure of the DHA humanitarian coordination office (UN-HACO) at the end of 1997, whose responsibility has been to co-ordinate humanitarian affairs, a more modest unit has been established under the UN Resident Coordinator. This unit will continue to support the established co-ordination mechanisms in addition to increasing the involvement of the new government. The functions of this unit include: co-ordinating the various forums between government, UN Agencies, Donors and NGOs; collating and disseminating data and information as they relate to humanitarian assistance; monitoring those groups and communities considered vulnerable; carrying out regular assessments.

Despite the closure of its Liberia office, DHA will continue to monitor the situation through its Integrated Regional Information Network (IRIN) West Africa.

The mechanisms established within this co-ordination unit will dovetail into the overall co-ordination strategy of the Re-integration Programme, which is the responsibility of a broad-based steering committee chaired by the Ministry of Planning, with the participation of seven line ministries, UN Agencies, NGOs and Donors. This Re-integration Steering Committee (REINCOM) will be serviced by a secretariat, a UNDP-funded project executed by the Ministry of Planning with the technical assistance of UNDDSMS. The secretariat will be housed within the Ministry of Planning and support will be given to create long-term capacity beyond the re-integration phase. County task forces will be established at the county level with similar participation. Administrative support to these task forces will be provided to enable them to

develop a strategy for the county to be included within the medium to long-term reconstruction plan. The Government will take a lead in monitoring all programme activities.

COORDINATION MONITORING AND INFORMATION

RESETTLEMENT, REPATRIATION,
RE-INTEGRATION AND SHELTER

PROJECT SUMMARIES Resettlement, Repatriation, Re-Integration and Shelter

Appealing Agency: United Nations High Commissioner for Refugees (UNHCR)

Activity: Repatriation and re-integration of Liberian refugees from main countries of asylum (Côte d'Ivoire, Ghana, Guinea, Nigeria and Sierra Leone) and elsewhere; programme for returning Liberian refugee children/adolescents.

Code: LIB-98-1/N01

Implementing Partners: NGOs

Time Frame: January - December 1998

Objectives: Promote large-scale voluntary repatriation of Liberian refugees and assist and monitor their dignified and safe return, and re-integration.

Funds Required: US\$ 40,235,194

SUMMARY

Between the time of preparing this Appeal and the end of 1998, it is assumed that out of 480,000 Liberian refugees in the sub-region, 422,500 will either repatriate spontaneously or with UNHCR assistance, as follows:

Spontaneous repatriation: 40,300 refugees without UNHCR assistance

UNHCR assisted repatriation: 221,000 refugees with UNHCR assistance (food and non-food items and transportation)

161,200 refugees with UNHCR assistance excluding transportation

Some 57,500 Liberian refugees are expected not to opt for repatriation and would remain in the countries of asylum. A separate durable solution will have to be found for this group.

UNHCR shall provide transportation for vulnerable groups such as female-headed households, elderly and disabled persons and those expected to travel 20 km or more. The majority of the returnees transported by UNHCR will travel by land. However, the refugees will be encouraged to repatriate, to the extent possible, without UNHCR transportation assistance, in particular from Côte d'Ivoire and Guinea where most of them have been living close to the Liberian border.

A repatriation assistance package of a one-month food ration (provided by WFP) as well as non-food items will be distributed before departure. The food ration is composed of cereals and oil (6 kgs and 750 gms respectively, per person per month). Each family (average family size five persons) will receive one plastic sheeting, one jerry can, one kitchen set, two blankets and two mats. A second WFP one-month food ration will be provided within a period of one month after arrival. In principle, seeds and agricultural tools (two hoes, two cutlasses, one axe and one file per family) will be provided separately one to three months later by the Seeds and Tools Committee (STC) of Liberia through implementing partners.

The implementation of UNHCR's Re-integration Programme has already started. It is carried out within the framework of the re-integration strategy jointly developed by the Government of Liberia, Donors, NGOs and other UN Agencies. Quick Impact Projects (QIPs) will be concentrated in the five main counties of return: Grand Gedeh, Maryland, Nimba, Lofa and Bong. The QIPs include health, education, water and sanitation activities to benefit both the returnees and the local communities including IDPs and ex-combatants.

In line with the increased emphasis that UNHCR accords to extremely vulnerable refugee children and adolescents, and recognising that Liberia is a case in point, a psycho-social, education and capacity-building programme is being developed for war-affected Liberian youth (returnees and local population) in the main areas of return. Sufficient donor support permitting, UNHCR would implement this special initiative of tailored activities in the sectors of health, community services, education, and income-generation in close coordination with UNICEF. In that case, the budget of US\$ 2,000,000 would be incorporated into the above presented budget and added to UNHCR's core activities for the repatriation and re-integration of Liberian refugees.

FINANCIAL SUMMARY			
Budget Item	Asylum Countries	Liberia	US\$
Food	400,028	245,000	645,028
Transport/logistics	7,640,927	3,265,450	10,906,377
Domestic needs	2,964,625	-	2,964,625
Water	174,214	356,000	530,214
Sanitation	104,885	275,000	379,885
Health	1,045,552	1,068,850	2,114,402
Shelter	1,187,184	515,000	1,702,184
Community services	212,955	448,250	661,205
Education	-	806,750	806,750
Crop production	-	50,000	50,000
Livestock	-	395,000	395,000
Fisheries	-	242,500	242,500
Forestry	303,948	-	303,948

Income-generating activities	-	965,000	965,000
Legal assistance	854,673	62,500	917,173
Agency support	1,019,733	1,446,700	2,466,433
Programme delivery*	9,792,013		
Administrative support	2,392,457		
Sub-Total	38,235,194		
Programme for returning Liberian refugee children and adolescents	2,000,000	2,000,000	
TOTAL	40,235,194 * includes protection- related, monitoring and co-ordination costs		

There is an overall increase in programme delivery and administrative support costs for the operation in comparison with those sought in the UNHCR Appeal published in June 1997. UNHCR has switched the source of funding for these activities in the countries involved in the Liberian repatriation operation from general programme to special programme. This shift reflects the changed focus from care and maintenance assistance programme (funded under general programme) to repatriation programme (funded under special programme).

Appealing Agency: United Nations Development Programme (UNDP)

Activity: Support to returning IDPs.

Code: LIB-98-1/N02

Implementing Partners: Liberia Refugee Repatriation and Resettlement commission (LRRRC), International and National NGOs

Time Frame: January - December 1998

Objectives: To support the relocation of internally displaced people. In addition, to provide transport to those in need and assist in the form of a modest resettlement package.

Funds Required: US\$ 1,316,000

SUMMARY

The conflict in Liberia has resulted in the internal displacement of almost one million people. The post-conflict period has been heralded by a common desire on the part of many displaced to return to their homes. Among the category of people termed displaced, are those living in shelters in urban areas, whose presence has been sanctioned by the Government. There are also those known as squatters, who occupy public and private properties without approval. At the community level, there are many who sought refuge with families and friends. In some instances, whole communities sought shelter in other communities.

Among the displaced, there are those who are considered more vulnerable and who require particular attention. They include the disabled, elderly, female-headed households, pregnant and lactating women, children under five and unaccompanied minors. It is estimated that there are 226,000 displaced persons residing in approved shelters, another 45,000 are living as squatters on private properties, while it is believed there are up to 700,000 throughout the country living in communities different from their pre-war home areas.

The relocation of these people will be carried out in harmony with the UNHCR programme of refugee repatriation. An essential factor is the sensitization of both the displaced and the community. There is an urgent need to address the squatter population who, apart from occupying private property, is receiving no assistance. Food will be provided on the same basis as that which is planned for refugees, e.g., two month rations provided by WFP. Transport will be ensured to those considered vulnerable and living in remote areas where there is no means of public transportation. Resettlement packages and temporary shelter materials will also be given to those most in need.

Assistance will be provided at the community level through micro-projects to enable the community to prepare and support the returnees. Items supplied will include tools such as shovels, cutlasses, axes to facilitate the clearing of land and maintenance of roads.

Transport needs will be partially addressed with logistical support from the EU. However, the needs are greater than available resources and some additional logistical support is required to fill the gap. The need for plastic sheeting is considered most urgent to allow families some time to re-establish themselves. It is hoped to provide plastic sheeting to over 45,000 families presently living in shelters. The resettlement package includes the food basket and access to seeds and tools through the National Seeds and Tools Campaign.

Support to the IDP relocation will be provided by the donor community, through UNDP,

to the LRRRC, which is the re-integration agency tasked with monitoring the operation, and to the local and international NGOs that are implementing partners. Support is required by LRRRC to carry out its monitoring role and facilitate representation at the major destination points.

The total cost of the relocation plan is US\$ 4,416,000. However, a considerable portion of this amount has been met by WFP, EU (transport), and USAID (plastic sheeting). To fill the gap there is an outstanding need for US\$ 1,316,000 as indicated below.

FINANCIAL SUMMARY	
Budget Item	US\$
Sensitisation	50,000
Census/registration	20,000
Transportation	500,000
LRRRC institutional support: a) monitoring b) coordination at way stations and drop off points	206,000
Community assistance packages: a) cutlasses 40,000 b) shovels 40,000 c) diggers 40,000 d) files 40,000 e) axes 20,000	540,000
TOTAL	1,316,000

Appealing Agency: United Nations Development Programme (UNDP) for International Labour Organization (ILO)

Activity: Vocational training; capacity building to replicate training; development of small-scale business enterprises; implement grass roots management (GMT) training; development of database of graduates and their activities; follow-up programme to gather relevant implementation data.

Code: LIB-98-1/N03

Implementing Partners: ILO, Local NGOs, Norwegian Refugee Council (NRC), United Nations Operations (UNOPS)

Time Frame: January - December 1998

Objectives: To train 3,000 men and women, including the handicapped, in practical employable skills. As many as 120 trainers will also be trained in the implementation of short-cycle training programmes. The project will also facilitate the graduation of 30 students from a GMT training programme. Training manuals and a follow-up database will be developed.

Funds Required: US\$ 1,790,000

SUMMARY

This project will equip persons returning to their home communities with self-employment skills to deal with the problems of resuming a productive life. The programme also aims to assist the establishment of micro-enterprises in both the formal and the non-formal sectors in the rural areas, facilitate links with other agencies taking advantage of opportunities for small-scale income-generating activities and develop a follow-up system for initial support and collection and analysis of relevant data.

A kit of basic tools and equipment, in addition to some working capital for the small business start-ups will be provided as well as initial counseling and co-ordination activities.

Most of the training will be packaged for delivery by local NGOs. Training of trainers will also be undertaken using the GMT system to build capacity for short-cycle skills. This will facilitate the development of rural vocational training in various training institutions.

The building of a comprehensive database containing information on training and subsequent economic activities, together with staff training in the operation and application of such a database is an integral part of the project.

FINANCIAL SUMMARY	
Budget Item	US\$

Operational support	200,000
TOTAL	1,790,000

Appealing Agency: United Nations Development Programme (UNDP) for United Nations Centre for Human Settlements (UNCHS/HABITAT)

Activity: Training of trainers for elected leadership (councillors).

Code: LIB-98-1/N04

Implementing Partners: Local authorities; Ministry of Internal Affairs (MoIA)

Time Frame: January- December 1998

Objectives: To introduce trainers to management training tools, so that they are able to train local Councillors and thus enable local authorities to make policy and strategic decisions.

Funds Required: US\$ 270,000

SUMMARY

Capacity-building for local authorities will initially focus on the training of trainers for elected leadership (ie.councillors), to be held for trainers from the different counties of Liberia under the guidance of the UNCHS (HABITAT). Training will be based on training material prepared by UNCHS. The content of the 13-volume UNCHS material focuses on the different roles of councillors, including: policy-maker, decision-maker, communicator, facilitator, enabler, negotiator, financier, overseer, power-broker, institution builder and leader. The intention is to enable the trainers to understand the content of the materials and the delivery methodologies.

UNCHS has experience in training trainers over a two-and a half weeks course. A minimum of two trainers from each of the counties and two from the Ministry of Internal Affairs will participate in the first week of the course, under the direction of two management training consultants. Trainers will become acquainted with the training materials and then prepare a series of training sessions, to be delivered during the subsequent one to two weeks of a pilot workshop with councillors. The course will be lengthened to allow two weeks with councillors. The final 3-4 days of the course will be spent by the trainers in reviewing the training manuals and evaluating their suitability for use in the country. They will also develop national and/or

region-based action plans for future training of local governments in Liberia. The on-site workshop staff as well as other administrative logistical matters will be supervised by a national programme co-ordinator from a participating institute or the Ministry of Internal Affairs (MoI).

Main Outputs

1. Trainers with the ability to train elected leaders of local authorities.
2. Up to 50 local authority leaders trained in a variety of areas critical to local authority.
3. Manuals for training local authority leaders in Liberia.
4. A database on the capacity of local authorities.

Appealing Agencies: United Nations Development Programme (UNDP) for United Nations Centre for Human Settlements (UNCHS/HABITAT)

Activity: Training for community-based human settlement reconstruction.

Code: LIB-98-1/N05

Implementing Partners: Local authorities; Ministry of Internal Affairs; NGOs; Community-based organisations (CBOs)

Time Frame: January - December 1998

Objectives: To address the training needs of local authority staff, local NGOs, CBO's and small-scale entrepreneurs in participatory planning and management and thus augment the local capacity to address the problems of rehabilitation and reconstruction of human settlements.

Funds Required: US\$ 1,000,000

SUMMARY

The project will design and set up training schemes, largely involving on-the-job training, in a variety of areas, such as the preparation of community action plans, participatory environmental planning and management, community-based water and sanitation and infrastructure maintenance. The project will also support the strategic planning capacity of the Monrovia City Corporation by financing the preparation of aerial photographs and mapping.

Main Outputs

1. Trained staff in to provide community-based infrastructure and services and in participatory planning and management, within local authorities, local NGOs and CBOs.
2. Community action plans for housing, infrastructure and services.
3. Aerial photographs and maps.

Activity: Capacity-building for the effective delivery of housing, infrastructure and social facilities

Code: LIB-98-1/N06

Implementing Partners: Micro-enterprises in building and construction; Ministry of Public Works; National Housing Authority

Time Frame: January- December 1998

Objectives: To improve local capacity for the production and utilisation of improved local building and thus enable communities to rehabilitate housing, infrastructure, social facilities and public buildings.

Funds Required: US\$ 1,500,000

SUMMARY

The project will design and set up a training scheme for the production and utilization of improved local building materials. Building materials production and training centres will be established in Monrovia, and in the counties in which there has been extensive damage to houses and infrastructure. The project will utilise unemployed youth and ex-combatants, with emphasis on equitable gender representation.

Training will include how to produce improved local building materials and how to utilise these in the rehabilitation of buildings and infrastructure. In addition, training will be given in bidding procedures for construction sub-contracts and other aspects of construction management.

Finally, the project will finance sub-contracts to small contractors to: a) rehabilitate social facilities (schools and health centres) and public buildings; b) provide practical training to small contractors and, c) generate employment and income for vulnerable groups.

Main Outputs

1. Artisans trained in the production and utilisation of building materials
2. Micro-enterprises with the ability to bid for small building subcontracts
3. Rehabilitated houses, infrastructure, social facilities and public buildings

Appealing Agency: United Nations Development Programme (UNDP)

Activity: Micro-credit scheme, as a poverty alleviation tool.

Code: LIB-98-1 / N07

Implementing Partners: United Nations Department for Development Services and Management Services (UNDDSMS) and Local NGOs

Time Frame: January - December 1998

Objectives: To provide access to credit for 3,000 beneficiaries, mainly war-affected women.

Funds Required: US\$ 460,000

SUMMARY

This project makes available small loans to the poorest of the poor, as identified by local NGOs within the community. Beneficiaries of war are Women who have been directly affected, majority of whom are heads of households. To date, over 2,000 women have benefitted from this revolving funds; each receiving US\$100 as start up capital. Through this project, these women have been able to sustain their households. There has been ninety eight per cent repayment with interest into the revolving fund. The beneficiaries will therefor continue to benefit from the fund and in most cases, expand their small enterprises. The project is administered and monitored by six local NGOs under the supervision of the United Nations Department for Development Services and Management Services (UNDDSMS).

The activities involved are mostly petty agricultural products trading and other market items in rural areas. In view of the initial success of this project, additional 3,000 women have been identified to become clients of the project.

To implement the project, training of the local NGOs, field agents and managers as well as some capacity-building of NGOs are essential to ensure that beneficiaries receive adequate support from the scheme. Field monitors will also be in place to assist and support the implementation of the micro-credit scheme.

Appealing Agency: United Nations Development Programme (UNDP)

Activity: Geographical Information System (GIS).

Code: LIB-98-1/N08

Implementing Partners: United Nations Department for Development and Management Services (UNDDSMS), Ministry of Planning (MoP)

Time Frame: January - December 1998

Objectives: To maintain and standardise an information system using survey data, regular data-collecting and mapping to facilitate programming for reconstruction and resettlement assistance.

Funds Required: US\$ 350,000

SUMMARY

Already installed in the MoP, the GIS is an information network which translates hard data into maps which are used by the Government, UN Agencies and the NGO community to plan and monitor all interventions. To date, all inputs have been obtained through baseline surveys carried out at clan level throughout the entire country in June 1997. To validate and update the system, a second baseline and a socio-economic survey will be carried out, which will include the use of a series of questionnaires at clan/township, district, and county level. In addition, there will be a physical assessment of the conditions within the community. Regular collection of data will also be gathered on an ongoing basis to support the information system during the reconstruction period. This information will include data on production, commodity export and imports, consumption and prices.

Personnel from the MoP has been trained in the GIS, although further training and support is required if the full potential of the system is to be realised. Technical assistance is necessary in the use of up-to-date computer software. The small number of government officials already being trained will be increased to meet the expanding scope of the system. In addition, surveyors will be trained, thus guaranteeing accuracy and consistency of data.

The UNDDSMS will continue to monitor and supervise this project which will become a crucial tool for planning both short- and long-term needs.

Activity: Reactivation of Roberts International Airport (RIA), Liberia.

Code: LIB-98-1/N09

Implementing Partner: International Civil Aviation Organisation (ICAO)

Time Frame: January - December 1998

Objective: To provide minimum requirements for resumption of flight operations at RIA to receive humanitarian supplies and start commercial flights for neighbouring countries.

Funds Required: US\$ 2,793,670

SUMMARY

The seven years of civil war in Liberia has virtually destroyed all areas of its economy, including its once thriving civil aviation sub-sector. The main runway at Roberts International Airport was bombarded with resultant craters and big potholes. The new terminal building was destroyed by rocket and shell strikes and set on fire. The bombing and shelling on the airport followed by vandalism and looting left it devoid of all essential facilities such as COM/NAV/MET Aids, fire and rescue vehicles, equipment for aircraft handling and passenger handling, etc.

In the wake of this prolonged civil strife, the newly elected government is faced with massive reconstruction and rehabilitation tasks. The government in its effort to restore the nation's economy, attaches high priority to the rehabilitation of the services and facilities at RIA in support of a return to safe, orderly and economic air transport into and from the country. Moreover there is an urgent need to rehabilitate minimum facilities at RIA for flights carrying humanitarian and development project supplies.

In 1993, at the request of the Government, UNDP undertook a preliminary assessment on damages at RIA utilising experts from ICAO. The cost estimate for rehabilitation of RIA is in the region of US\$ 40 million and rehabilitation would take five years to complete. With the new climate of peace and stability, the Government is very keen to start flight operations at RIA as soon as feasible with only minimal facilities.

In line with this objective, some basic work such as general cleanliness, repairs to runway pavements, renovation of an interim terminal and provision of electric power connection for limited operation, etc., have been completed. The other minimum requirements of the Air Traffic Control equipment for NAV/COM aid, fire and rescue vehicles, minimum airfield lighting, ground handling and passenger handling equipment are, however, essentially needed for safety and security of passengers and aircrafts.

In view of the above, this project covers the cost of only minimum requirements of services and equipment for resumption of humanitarian and regional flights at RIA.

Appealing Agency: International Organization for Migration (IOM)

Activity: Transfer of qualified human resources.

Code: LIB-98-1/N10

Implementing Partners: IOM and Government of Liberia

Time Frame: January - December 1998

Objectives: To support the return and re-integration of 200 highly qualified Liberian nationals.

Funds Required: US\$ 2,500,000

SUMMARY

The project aims to assist in returning to Liberia 200 highly qualified nationals whose skills and technical capacities are urgently required to help in the reconstruction of the country. The return of such professionals to employment in key positions will help Liberia to restore and strengthen its operational and management capacity in the civil service and other strategic sectors. This improvement in organisational capacity will enable the government to address the humanitarian and re-integration needs of the population and further support the implementation of Liberia's post war reconstruction programme. The project will be implemented in close co-operation with an appointed national counterpart Ministry, and with a steering group comprised of representatives from the civil service and the private sector.

Background

The seven-year civil war has brought the local administration in the government and other strategic sectors to the verge of complete collapse. With the breakdown of law and order in April 1996 most of the civil infrastructures were destroyed, leading to the loss of both state property and private sector s assets. This has prevented the country from coping with its current humanitarian and reconstruction needs.

Liberia is now faced with the challenge of addressing the resettlement and re-integration needs of its entire war-affected population. The restoration of basic social services is critical for the re-integration and reconstruction process to take off. The fulfilment of these most basic requirements remains essential to the maintenance of peace and promotion of national reconciliation in the country.

The Problem

Many highly qualified nationals left Liberia following the outbreak of the civil war. Their outflow for safety and work opportunities abroad was facilitated by the presence of large Liberian communities in other countries, particularly in North America. The result is a heavy loss of national human resources, which is now undermining the efforts of the government to address the humanitarian and re-integration requirements of the returning population. Without the return of national professionals, the government will continue to lack the management and operational capacities it desperately needs for the successful implementation of its reconstruction programme. The return of highly qualified nationals to employment in key occupations is therefore crucial to the consolidation of the national reconciliation process in the country, as well as the welfare of the Liberian people.

Many highly qualified Liberians, who are eager to return and contribute to the reconstruction of their country, cannot afford the costs of relocation and re-integration back home. As the government s capacity to recruit from abroad such professionals is limited, external assistance is urgently required in order to provide the necessary support, including meeting the financial costs associated with the return and re-integration process.

Target Group

The project will assist 200 highly qualified Liberians and their immediate families whose qualifications and professional experience are desperately needed to fill priority positions in both the civil service and other strategic sectors such as transport, agriculture, mining, education and health. The technical profiles of the required professionals include economists, sociologists, engineers, administrators, teachers, and medical doctors. A university degree or the equivalent along with two years relevant work experience will be the minimum qualifications.

Of the total target group, 125 will be recruited in neighbouring African countries, with the remaining 75 assisted to return mainly from Europe and North America. It is estimated that some 300 dependants will be assisted with return tickets and other relocation costs. The target group will benefit from a return and re-integration assistance package that will be

calculated to meet both the returnees professional and social re-integration needs.

Objectives

This project aims at strengthening the institutional capacities and the organisational capabilities of the Government of Liberia in both the civil service and other strategic sectors. This will be undertaken by assisting the return and re-integration of highly qualified Liberians whose skills and professional contributions are required toward enhancing the reconstruction and rehabilitation of the country.

Project Purpose

To establish in the country of return an employment search and job placement network in order to identify job vacancies in priority sectors, including enlisting those which offer realistic job placement opportunities for prospective candidates.

1. To establish in host countries a recruitment network for the identification, selection, and recruitment of highly qualified Liberian nationals whose skills and qualifications are required.
2. To establish a mechanism to follow-up and monitor the return and re-integration process of the returnees in order to facilitate, to the extent possible, their professional and social re-insertion.
3. To provide ongoing capacity-building support by strengthening the institutional framework of the project through the participation of the counterpart institution and the steering group in the implementation process.

Strategy

The project by closely involving the government counterparts in the implementation of activities and by consistently linking job placement services to priority manpower requirements, will effectively strengthen the institutional capacities of the government and the private sector. Close co-ordination will be maintained between project recruitment offices abroad, and the placement mission in Monrovia. The process of matching candidates to jobs will be demand-driven on basis of the assessed manpower needs. After a job offer is issued and accepted by the candidate, IOM will prepare and conclude with each returnee a re-integration agreement containing on individual basis the details of given assistance package, such as costs of travel, shipment of household goods, professional equipment and re-integration allowance. The recruitment missions will organise all pre-departure preparations including the travel logistics. The placement mission, on the other hand, will establish regular contacts and follow-up with the returnees with the view of monitoring and facilitating the smooth re-integration of the returnees. The project which will be anchored to a steering

group comprises counterparts, mainly from the government ministries and the private sector. This group should steer project implementation toward achieving its established goals, including ensuring the sustainability of its activities.

Expected outcomes

4. The identification of priority sectors and/or need areas has been both completed and approved by the national counterpart Ministry, including a concrete listing of priority jobs and skills gaps. Job vacancies will be identified and duly filled-in job offers obtained from employers and forwarded to candidates along with letters of appointment from the national counterpart Ministry. Priority sectors will be regularly reviewed in order to provide the basis for the demand-driven process of matching candidates to jobs whose conditions of service are acceptable and offer realistic retention prospect.
5. Promotional campaign will be launched with information material on the selection and recruitment of candidates packaged and circulated among the target group in host countries, including ensuring sufficient sharing of similar information among prospective employers and other stakeholders. Candidates with the right professional profiles will be identified and selected for project assistance, and details of their curricula vitae and other qualifications will be forwarded to placement mission for further matching to jobs. Candidates will accept job offers and, once relevant inputs are obtained from both the employer and the placement mission, will be given a suitable re-integration package in order to support their return and re-integration process.
6. A total of 200 highly qualified candidates will be selected, recruited, and returned to jobs, of whom 125 from within Africa, and 75 from elsewhere abroad. All returnees will be assisted with an adequate re-integration package, including other facilities authorised by the national counterpart Ministry. Close contacts and follow up will be maintained with the returnees and further assistance such as advisory services will be provided, as necessary, to help the returnees to cope with the problems impeding their re-integration process. Survey questionnaires will be distributed among the returnees and answers collected and analysed with the view of using the feedback to improve direct support to returnees, as well as overall delivery of assistance by project.
7. An official counterpart appointed by the national counterpart Ministry and a steering group will be formed with the participation of representatives mainly from the civil service and other strategic sectors. The official counterpart and other national entities represented in the steering group will be trained on the work of the project, and familiarised with its activities, including the operations of the database. Capacity support will be provided in terms of limited technical and

material help coupled with gradual transfer of project ownership to the national counterpart institution in order to sustain its activities.

FINANCIAL SUMMARY

Direct programme costs	414,040
Indirect costs (share of staff and office costs)	191,286
Overheads	73,074
TOTAL	2,500,000 PROJECT SUMMARIES Resettlement, Repatriation, Re-Integration and Shelter

FOOD PRODUCTION, FOOD SECURITY AND FOOD AID

PROJECT SUMMARIES Food Production, Food Security and Food Aid

Appealing Agency: Food and Agriculture Organization of the United Nations (FAO)

Activity: Emergency supply of essential farm inputs to vulnerable farmers, repatriated returnees and relocated IDPs.

Code: LIB-98-1/ N11

Implementing Partners: Ministry of Agriculture (MoA), FAO, NGOs

Time Frame: January - December 1998

Objectives: To provide approximately 177,000 vulnerable farm households with adjusted input packages for the 1998 main planting season.

Funds Required: US\$ 1,750,000

SUMMARY

Farm inputs provided under this project will be part of the assistance within the framework of the community-based re-integration plan. This approach results in a very high number of beneficiaries, as it targets farmers returning to their villages through assisted repatriation, spontaneous return, and IDP resettlement, as well as farmers in areas which have been

inaccessible during the war. UNHCR is planning for the repatriation of 422,500 refugees, of which an estimated 382,200 will actually be assisted and LRRRC expects to relocate some 270,000 IDPs.

The project requirements have been calculated on the basis of risk mapping and vulnerability analysis (see ANNEX V). According to the relative vulnerability, districts are categorised into high-, medium- and low-risk areas. Factors determining the vulnerability level of a district comprise, among others, accessibility, ratio of total returning population to current population, access to humanitarian aid and agricultural tools distributed during 1997.

In view of resource availability and delivery capacity of the implementing NGOs, the members of the STC (composed of representatives of the EU, USAID, FAO, Ministry of Agriculture, NGOs) have agreed that the 1998 distribution programme is to target 90 percent of the farming population in the high risk areas, 60 percent in the medium, and 30 percent in the low-risk areas.

Based on the provision of 25 kg of seed rice per targeted family, sufficient to plant about half hectare, the total requirement is calculated at about 4,450 MTs. This amount, together with the estimated in-country availability, would increase the area planted to rice to about 80 percent of the pre-conflict level on a per caput basis. By mid-December, firm commitments stood at 1,250 MTs (EU) and 600 MTs (USAID/OFDA). Stocks with the STC are 253 MTs (CRS) and 89 MTs (FAO), totalling 2,174 MTs. The EU and OFDA are considering additional allocations of 1,000 and 500 MTs, respectively. Assuming that all earmarked amounts will be made available, the remaining shortfall is calculated at about 800 MTs, for which this appeal seeks funding. These 800 MTs of seeds budgeted at US\$ 880,000 (excluding internal transport) would result in the production of about 14-16,000 MTs of paddy, or some 9,000 MTs of milled rice at a present market value of US\$ 3.6 million. In terms of savings in food aid cereal equivalent, the value is approximately US\$ 2.7 million.

To reduce the period of food aid dependency after resettlement, the project envisages to provide planting material for short duration varieties of cassava and sweet potato. For better balanced diets, the seed package will include pulse seeds, where appropriate.

To assist farmers in meeting high cash needs to replace lost assets, targeted farm families will receive an average of 10kg groundnut seeds.

Ultimately, the composition of the seed packages should be adjusted to the specific needs and potentials of a given area.

Funds required to procure the outstanding items, in accordance with the agreed composition of the toolkits, would amount to approximately US\$ 400,000. This takes into account stock balance, pipeline and tool kits already available through UNHCR as part of its repatriation assistance package, as well as the UNDP support for the IDPs.

As targeted food distribution will be an integral part of the resettlement programme, specific interventions to prevent seed consumption will generally not be required.

FINANCIAL SUMMARY			
Budget Item	Quantity	Unit Cost	US\$
Rice seed	800 MTs	1,100	880,000
Groundnut seeds (shelled)	100 MTs	1,300	130,000
Cassava cuttings / potato vines	provision for	120,000	
Pulse seeds	provision for	20,000

Internal transport	200,000		
TOTAL	1,750,000		

Appealing Agency: Food and Agriculture Organization of the United Nations (FAO)

Activity: Multiplication of rice seed to standard and establishment of seed testing facilities.

Code: LIB-98-1/N12

Implementing Partners: Ministry of Agriculture, FAO

Time Frame: January - December 1998

Objectives: To enhance local production of quality seed of well adapted and improved rice varieties; to revive local seed testing capacities; to train Ministry of Agriculture (MoA) staff.

Funds Required: US\$ 531,000

SUMMARY

Rice is the main staple food in Liberia and before the war some 86 percent of the farming population produced about 65 percent of the domestic consumption needs. By 1993, production dropped to 30 percent of the pre-war level. The Small Holder Rice Seed Project (SRSP), charged with the production of quality seeds ceased to function. For several years, the international community has provided seeds to enable farmers to resume production whenever the security situation permitted. None of the neighbouring countries was producing sufficient surplus to allow the selection of the best suited varieties at all times. In order to reduce the

dependency on seed imports, a number of NGOs started to establish small-scale seed multiplication sites. In the emergency context, it was neither possible nor appropriate to apply strict quality standards. At farmers' level, the scarcity of seeds has resulted in the mixing of varieties of often unknown origins. Replacement of unsuitable varieties will be one of the necessary interventions for the rehabilitation of the crop sector. The project will conduct variety trials to screen for suitability under Liberian conditions and multiply seeds of well performing varieties according to international standards. The project will emphasise swamp varieties, as yield potentials are two to three times higher than under upland cultivation. An expansion of the fully developed swamp area, which, in 1987, amounted to 2,000 hectares (a mere three percent of the estimated potential), is one of the strategies for increased food security. The project will start with the utilisation of 200 hectares of swamp and 300 hectares of upland rice, with a view to expand as the need arises. Production will be done on rehabilitated stations, or by private farmers under the supervision of project staff in collaboration with the MoA.

The seed laboratory will be equipped to conduct all quality tests according to international standards. FAO will provide technical backstopping and refresher training to the MoA, to facilitate the resumption of a full scale seed programme in the near future.

Based on the present market price of rice, the expected production in the first year is valued at a minimum of US\$ 220,000 (calculated on the basis of present average yields of 1.2 MTs/hectare for upland and 2.5 MTs/hectare for swamp production, and not taking account of yield increase obtainable through improved crop management as well as higher market value of quality seeds). Yield increase during subsequent year as a result of using quality seed is valued at about US\$ 45,000. Additional benefits through training and capacity building are expected.

FINANCIAL SUMMARY	
Budget Item	US\$

TOTAL	531,000

Appealing Agency: Food and Agriculture Organization of the United Nations (FAO)

Activity: Emergency rehabilitation of agricultural blacksmithing and manufacturing.

Code: LIB-98-1/N13

Implementing Partners: Ministry of Agriculture (MoA), FAO, NGOs

Time Frame: January - December 1998

Objectives: To strengthen efforts carried out in project TCP/LIR/6714 on emergency rehabilitation and apprenticeship training of rural blacksmiths and assisting the establishment of village workshops to provide tools and food processing equipment required to increase food production. To establish apprenticeship training for young artisans blacksmiths and fabricators.

Funds Required: US\$ 332,000

SUMMARY

The civil strife in Liberia with constant displacement of populations deprived farmers of their hand tools. Donors have channelled funds through humanitarian agencies to import essential tools. To improve self-reliance and reduce aid dependency it is necessary to strengthen local manufacturing of hand tools and small-scale equipment adapted to specific needs of the farmers and rural communities. The project will use and promote existing skills in small urban and rural workshops. Replacing the workshop tools lost during the war, upgrading their skills and ascertaining their access to the required raw materials will support village blacksmiths and fabricators. In the previous project only seven out of thirteen counties were covered. It is now necessary to use the established master blacksmiths in training artisans in the remaining six counties. This project will assist in establishing 60-village blacksmith workshops and strengthen the capacities of the 70 workshops established in the previous project. Fabrication workshops will be assisted in the manufacture of processing equipment to support the root and tuber crop project.

The selected blacksmiths and fabricators will be re-equipped and trained to make simple hand-tools and processing equipment, such as cassava grating machines, coconut graters, palm kernel crushers, rice thrashers, smoking kilns etc. Former war combatants will be attached to workshops for apprenticeship training. Support to village blacksmiths will be given in the form of in-kind credit. The created fund will be used in assisting additional smiths.

Based on a production of 40 hoes/day/workshop for 200 days a year, with a profit margin of 20 percent, it is estimated that each blacksmith will generate up to US\$ 3,760 of profit/year thanks to project intervention.

FINANCIAL SUMMARY	
Budget Item	US\$

Supplies and workshops tools	100,000
Operational support	30,000
TOTAL	332,000

Appealing Agency: Food and Agriculture Organization of the United Nations (FAO)

Activity: Emergency assistance in root and tuber crop multiplication and processing.

Code: LIB-98-1/N14

Implementing Partners: Ministry of Agriculture (MoA), FAO, NGOs

Time Frame: January - December 1998

Objectives: To establish root and tuber multiplication plots and distribute planting materials to destitute farmers. To establish small cassava processing units at village level to reduce post harvest losses and generate additional income through marketing of surplus production. To increase food security through diversification of crop production.

Funds Required: US\$ 326,000

SUMMARY

In the near future, neither per capita production nor commercial imports of rice are expected to keep pace with the population growth. The consumption of root and tuber crops is therefore likely to account for an increasing proportion of total calorie intake. This trend began during the war, when cassava and other root crops gained importance as a reliable staple. Many

communities derived almost their entire energy requirements from root and tuber crops while part of their protein and vitamin needs were covered by cassava and sweet potato leaves. In view of the still under-exploited potential, support to this crop sector would significantly increase food availability. One of the main constraints to expansion of root and tuber production is that the available planting material falls short of the demand. The project aims to multiply and distribute planting materials at community level. Local NGOs will be responsible for the multiplication and the distribution, while FAO will provide technical assistance and training to field technicians. The second component of the project addresses post-harvest handling and marketing problems. The reduction of post-harvest losses has not received adequate attention, despite the substantial contribution this would make towards increased food security. The introduction of small- and medium-scale grating equipment at village level will create income opportunities and reduce labour constraints on rural women. Processing of root crops such as cassava not only permits the storage of a highly perishable product, but also reduces weight and volume, facilitating transport and commercialisation. Medium- and small-scale equipment will be fabricated locally through workshops established under project TCP/LIR/6714 (emergency assistance to rural blacksmiths). The fabricated grating units will be distributed to selected sites through NGOs. The recipient organisation will be trained in their operation and maintenance. To improve the performances and diversify the production, medium scale grating machines will be coupled with a palm kernel crusher which will be powered from the same engine.

In terms of cost-effectiveness, the proposed intervention will result in a production increase of 20-30,000 MTs of cassava. The major benefit of the assistance will be food security at household level. The estimated added value generated by each processing machine/year (based on 200 working days of work/year, five hours of work/day and a profit margin of 10 percent) is estimated at US\$ 2,500.

FINANCIAL SUMMARY	
Budget Item	US\$
International agronomist (4 months)	60,000
Processing engineer (4 months)	60,000
National consultant x 2 (24 months)	36,000
Training	10,000
Equipment 1 Pick-up 4x4, office equipment	30,000
Supplies: Planting material, fertiliser, hand tools, processing units, Complementary equipment	80,000

Operational support	50,000
TOTAL	326,000

Appealing Agency: Food and Agriculture Organization of the United Nations (FAO)

Activity: Emergency support to artisanal fishing communities and strengthening of the artisanal fish processing.

Code: LIB-98-1/N15

Implementing Partners: Ministry of Agriculture (MoA), FAO, NGOs

Time Frame: January - December 1998

Objectives: To revive the artisanal fishing sector, marine and inland, through the provision of inputs and introduction of improved fish processing techniques.

Funds Required: US\$ 373,000

SUMMARY

While acute malnutrition has become rarer, diet still tends to be low in protein. Before the war, up to 80 percent of the protein was derived from fish, caught by artisanal fishing communities in the rich coastal waters which extends over an area of about 20,000km² and in the extensive inland water system. The primary reason for the drastic decline in fish production is the lack of fishing materials after the looting of boats and fishing gear and the destruction of fish ponds. These constraints are being addressed through a project jointly funded by FAO and DHA-HACO, which provides fishing gears and processing equipment. As part of the Re-integration Programme, the beneficiaries include ex-combatants. By the end of the ongoing second phase, some 40-50 percent of the coastal fishing communities will have resumed production at pre-war levels. The proposed project will continue the dissemination of simple improved kilns, which increase the shelf-life of fish from four weeks, under the current practices, to six months. The project will train fisher folks and implementing NGOs in improved processing techniques and maintenance of equipment. A total of 800 fishermen's/women's families (480 for inland fisheries and 320 for marine fisheries) are targeted by the proposed assistance.

It is envisaged that 60 percent of the assistance will be utilised for the development of inland fisheries. This sub-sector will involve a high percentage of women, who have suffered disproportionately from the effects of war and many of whom have become heads of households. The annual income increase expected from the catches has been estimated at US\$ 464,000.

As the fishing sector is potentially profitable, inputs can be provided in the form of in-kind

credit. Generated funds will be used for the expansion of project activities in the respective communities, improved drying and smoking facilities on a larger scale and provision of support services for fishermen.

FINANCIAL SUMMARY	
Budget Item	US\$
Master fisherman (2 months)	30,000
United Nations Volunteers (UNV)/fish processing specialist (4 months)	12,000
UNV/Aquaculture Specialist (4 months)	12,000
National consultants (12 months)	18,000
Fish processing national consultant (4 months)	6,000

PROJECT SUMMARIES Health

HEALTH

Appealing Agency: World Health Organization (WHO)

Activity: Support to Primary Health Care (PHC) activities.

Code: LIB-98-1/N16

Implementing Partners: Ministry of Health (MoH), UNICEF, NGOs

Time Frame: January - December 1998

Objectives: To refurbish and equip hospitals and clinics in four counties to a minimal operational level; to identify, train and deploy/redeploy health workers; to provide technical and managerial support to the county health teams, as a means of strengthening PHC activities at

the district level.

Funds Required: US\$ 598,900

SUMMARY

There cannot be a functioning primary health care (PHC) services without the involvement of the periphery (community), secondary (clinics) and tertiary (hospitals) levels. As virtually all health institutions were looted and destroyed during the war, clinics and hospitals need major repairs and equipment.

To increase coverage and access to basic health services, PHC will be revitalised. Community participation and involvement will be promoted in this direction. Interventions other than health services have a significant impact on the mortality and morbidity. In this respect, inter-sectoral collaboration will be enhanced particularly through the approach of primary health care. This will enable communities to appreciate the wider benefits and linkages between health and other forms of development such as water and sanitation, food security etc.

WHO, in collaboration with UNICEF, NGOs and the Ministry of Health in a consolidated approach, will ensure that clinic and hospitals are refurbished, equipped and staffed by trained health workers to render health care services.

FINANCIAL SUMMARY	
Budget Item	US\$
Training/refresher training of health workers	50,000
Vehicle for field activities - Toyota four runner	35,000
Medical equipment and supplies	150,000
Minimal repairs and refurbishing of four hospitals and 16 clinics	100,000
Essential drugs and medical supplies for four hospitals and 16 clinics	160,000
Monitoring and supervision	70,000
Programme support costs (6 percent)	33,900
TOTAL	598,900

Appealing Agency: World Health Organization (WHO)

Activity: Community empowerment for health promotion and development.

Code: LIB-98-1/N17

Implementing Partners: Ministry of Health (MoH), UNICEF, Community Health Committees

Time Frame: January - December 1998

Objectives: To revitalise and/or establish PHC activities in communities; to strengthen linkage between the community and health care providers; to improve skills and knowledge of health workers, community health workers, community members in advocacy activities and health information sharing especially in the prevention of diarrhoea, malaria, malnutrition, ARI and TB.

Funds Required: US\$ 464,280

SUMMARY

Community-based health infrastructure have been destroyed or disrupted. Village health committees vanished with villages. Without good sanitary conditions, communal living in newly-created villages and towns usually results in epidemics of diarrhoea, measles etc. Lack of income-generating activities in these communities lead to poor nutrition and health because of lack of money to buy basic food and pay for health services, when required.

WHO, in collaboration with the MoH, will use the requested funds to establish or re-establish village health committees, train village health workers and sanitation teams to run PHC activities in the communities.

In order to empower the community members to be in a position to provide a balanced diet for their families and pay for health care, WHO in collaboration with relevant organisation will provide support to initiate income-generating activities. These activities will encourage and provide self-reliance to the country in carrying out health promotion by the communities themselves.

FINANCIAL SUMMARY	
Budget Item	US\$
UNV - Social Worker for community mobilisation (12 months)	140,000
Surveys - identification of community problems, establishing community health committees	12,000
Training of village/community health workers	16,000
Health education materials and health advocacy seminars	80,000

Seed money for income-generating projects	160,000
Monitoring and supervision	30,000
Programme support costs (6 percent)	26,280
TOTAL	464,280

Appealing Agency: World Health Organization (WHO)

Activity: Disease surveillance and laboratory services.

Code: LIB-98-1/N18

Implementing Partners: Ministry of Health (MoH), NGOs, UNICEF

Time Frame: January - December 1998

Objectives: To collect and disseminate health and disease trends and forestall disease outbreaks; to create a national capacity of laboratory diagnosis and confirmation for the purpose of disease surveillance; to strengthen the existing health information and epidemiological feedback system; to train mid-level health workers in sample epidemiology and laboratory techniques.

Funds Required: US\$ 604,052

SUMMARY

There can be no efficient health and medical services, be it at the peripheral or central level of care, without a flow of information on causes, diagnoses and management of diseases. It is therefore important to strengthen a disease surveillance system. This will serve as an early warning system in monitoring disease trends within the Primary Health Care (PHC) system. This implies that health facilities are supplied with necessary resources including appropriate logistics and well-trained personnel. The sequence for strengthening of the surveillance system should start from the central level including the referral laboratory before reaching the counties and health centres.

Funds requested will be used to give technical support to the staff of the Division of Epidemiology and Health Information of the Ministry of Health and Social Welfare; provide and install laboratory equipment and supplies at health centres and referral hospitals; in collaboration with the MoH and NGOs, train district health workers in the collection, analysis and reporting of health information; and analysing and disseminating quarterly epidemiological reports to all agencies and NGOs in the health sector.

FINANCIAL SUMMARY	
Budget Item	US\$
Personnel: One UNV - Epidemiologist One consultant - laboratory technician - 6 months Laboratory technicians (12 months), support staff	119,860
Laboratory reagents, equipment and supplies	250,000
Logistics (1 radio equip Toyota Jeep 4x4 Runner)	35,000
Training	25,000
Monitoring & supervision (duty travel and local running cost)	140,000
Programme support costs (6 percent)	34,192
TOTAL	604,052

Appealing Agency: World Health Organization (WHO)

Activity: Strengthening reproductive health care.

Code: LIB-98-1/N19

Implementing Partners: WHO, Ministry of Health, UNFPA, NGOs, FPAL UNICEF

Time Frame: January - December 1998

Objectives: To decrease maternal and neonatal morbidity and mortality; to encourage community involvement in sharing responsibilities of reproductive health, especially the male population; to double the number of women using any form of child-spacing methods; to train 1,000 community-based distributors of family planning commodities; to train 1,500 traditional midwives in 7 of the 13 counties in prenatal and post natal care, especially during emergency situation; to train 50 trainers in caring for high-risk pre-natal cases during emergencies; increase capacity of pre-natal and post-natal service providers in delivering services.

Funds Required: US\$ 993,220

SUMMARY

A large proportion of the female population (46 percent) are of reproductive age (14-49). Liberia's fertility rate is 6.7 children (LDHS, 1986); one of the highest in Africa. The

contraceptive prevalence rate is low, estimated at below 5 percent with wide variation between the urban and rural areas. The average Liberian woman, during her reproductive life span, bears 6.7 children with great risk to her health. Pregnant women in rural areas still live in extreme vulnerability as the clinics, health centres and hospital are not well staffed or equipped to address obstetric emergencies. Women have to walk long distances to seek referral services for obstetric emergencies and these usually result in preventable deaths.

Current data from the UNICEF State of the World's Children put Liberia's infant mortality rate at 144/1000 live births and under-five mortality at 216/1000 live births. Therefore, activities will also focus on reproductive health, especially on community-based distribution as well as male motivation and participation.

Many women and children die from common complications that are easily preventable. In this respect, the referral chain will be shortened and strengthened with intermediate facilities that will be well equipped and staffed to respond to these complications.

This project for which funds are requested will reinforce interventions in the following areas:

- continuation of training activities by: introducing recent training techniques in health education; organising training courses to train 1,000 community-based distributors (CBD) in family planning technology and service, 400 patients in sexually health, including prevention and treatment of sexually transmitted diseases, 200 health professionals in family planning and 1,500 TBAs, 16 mid-level health workers in the management of obstetric emergencies; supervising and evaluating impact of training on trainees output; providing training materials;
- provide equipment and supplies in support of pre-natal, post-partum and neonatal care;
- provide contraceptives;
- conduct community awareness campaigns in support of family planning via print and electronic media;

FINANCIAL SUMMARY	
Budget Item	US\$
One international consultant (Trainer - Obstetric Emergencies)	70,000
Support to local health workers (medical officer, health education officer, 25 local health team members)	127,000
Medical Supplies (pre-natal micronutrient supplements, contraceptives, tetanus toxoid vaccines)	250,000

Equipment (TBA delivery kits, prenatal, post-partum and neonatal)	200,000
Training courses including material production	70,000
Health education materials	10,000
Logistics (vehicle, motorcycles) and running cost	60,000
Monitoring, supervision and evaluation (duty travel)	150,000
Programme support costs (6 percent)	56,220
TOTAL	993,220

Appealing Agency: United Nations Children's Fund (UNICEF)

Activity: Revitalisation of 50 health clinics and 6 referral centres.

Code: LIB-98-1/N20

Implementing Partners: UNICEF, Ministry of Health and Social Welfare (MoH & SW), NGOs

Time Frame: January - December 1998

Objectives: Revitalise an additional 50 clinics, focus and reactivate 6 secondary referral centres in four counties (Bong, Montserrado, Nimba and Lofa); increase access to essential drugs, vaccines and medical supplies at the primary health care level; improve case management of obstetric emergencies at 6 referral centres; provide expanded programme of immunisation (EPI) materials to 13 counties for the immunisation of 340,000 under-five children against measles, polio, tuberculosis, diphtheria, pertussis and tetanus; immunise 500,000 women of child-bearing age against tetanus; support training for health workers on cold-chain management, rational use of drugs and case management of endemic diseases and obstetric emergencies.

Funds Required: US\$ 3,637,000

SUMMARY

Strategy

To improve health care delivery, a strategy will be adopted that aims at the development of a decentralised health system, with emphasis on behavioural changes at household and community levels. The county is the management unit which is headed by a County Health Officer. The management team or the county health team ensures that basic health services are provided in the clinics and referral health centres. Resources and management support

systems are managed by the county health team to run effective and efficient health system. In addition, the implementation of an essential drug policy would consist of reviewing the national essential drugs list and treatment guidelines. The procurement, distribution, and rational use of generic drugs will be strengthened.

Cost-sharing schemes will be explored, to facilitate community financing to ensure that community members are immediately made responsible for participating in financing health care at a price they can afford. This would reduce the dependency syndrome created as a result of relief intervention during the war. Community members using health facilities would be encouraged to pay a standardised fee-for-service.

There will also be increased focus on the organisation of the health care delivery system in the counties for the provision of integrated essential services. In the communities, traditional birth attendants and community health workers would be providing preventive services, such as encouraging mothers and caretakers to use oral rehydration therapy, breast-feeding, as well as clean and safe deliveries. At the clinic and health centre levels the objective would be to provide

access to curative services for Liberia's endemic diseases and preventive services, such as immunisation, pre-natal care, prevention of STDs and management of obstetric emergencies.

The establishment of a community-based surveillance system will provide an early warning and intervention capabilities for the counties to deal with diseases (acute severe diarrhoea, measles, whooping cough) of epidemic potential and acute malnutrition. Capacity-building of the county health teams will be strengthened, through training, to provide skills and knowledge. Medical materials and supplies will be provided to empower them to deliver quality health services.

Activities

The revitalisation of 50 health facilities in four counties will include ensuring that qualified staff are available in the health facilities and are trained in the rational use of drugs, techniques in administering EPI vaccines, and the maintenance of the vaccine cold-chain. Basic MCH and diagnostic equipment will be provided. Essential drugs and medical supplies will be provided on a regular basis. In addition, 6 county referral health centres will be provided with equipment that will assist them to render emergency services such as obstetrics care, laboratory, blood transfusion and emergency surgery. Also, the health centre will be supported to manage cases of trauma for war victims.

Health workers will be given refresher training in cold chain maintenance and rational use of drugs, the integrated management of childhood and maternal illnesses, and prompt management of obstetric emergencies. The capacity of the county health teams (CHTs) will be strengthened to carry on regular supervision of the health facilities in their counties to ensure adherence to MOH standards and improve quality of care. Traditional birth attendants, who are links between communities and health facilities, will be trained to provide safe and clean

deliveries.

MCH equipment will involve the procurement of diagnostic, cold-chain, and surgical equipment for the health facilities. Drugs, vaccines and medical supplies will be procured by UNICEF and distributed by the National Drug Service (NDS) to revitalise health facilities. Damaged or looted health facilities need to be refurbished minimally to create a conducive condition for the provision of health services and the protection of drugs, medical supplies and equipment.

The provision of logistical, operational and technical support is included in the capacity building of the Ministry of Health and county health teams.

FINANCIAL SUMMARY	
Budget Item	US\$
Essential drugs and medical supplies for all counties for 12 months	1,400,000
Vaccines and injection materials for 12 months	400,000
Cold-chain equipment at US\$ 2,500/facility x 50	125,000
Operational cost for storage of drugs, vaccines and medical equipment at US\$ 15,000/month x 12 months	180,000
Kerosene 10 gals/fridge/month (US\$20 x 50 x 12 months)	12,000
Training of health workers at US\$2,000/county x 12 counties on integrated services	24,000
MCH equipment at US\$ 3,000 per facility x 50	150,000
Procurement of two vehicles	26,000
Procurement of 50 bicycles	10,000
Minor renovation and rehabilitation of facilities at US\$1,000 x 50.	50,000
Operational cost for revitalised clinics at US\$100 x 50 x 12 months	60,000
Support to 6 secondary referral health centres (surgical equipment , laboratory equipment, blood bank and HIV testing kits) at \$100,000/centre x 12.	1,200,000
TOTAL	3,637,000

Appealing Agency: United Nations Fund for Population Activities (UNFPA)

Activity: Revitalisation of Reproductive Health (RH) Services (including family planning and sexual health) in at least two counties of Liberia.

Code: LIB-98-1/N21

Implementing Partner: Ministry of Health and Social Welfare (MoH & SW)

Time Frame: January - December 1998

Objectives: To make a significant contribution to the revitalisation of health services, and more specifically RH services, in post-conflict Liberia. To render at least two county hospitals fully functional in the provision of Emergency Obstetric Care (EmOC) and to revitalise the referral system from the community level to the county level to the national level in the area of RH services.

Funds Required: US\$ 810,000

SUMMARY

The Liberian civil war has left a country where, out of an estimated population of 2.3 million at the beginning of the war in 1989, 700,000 were forced to seek refuge in neighbouring countries, some 700,000 were internally displaced and 150,000 lost their lives. Most public and private infrastructure and property were either totally destroyed or looted. For example, the MoH building was destroyed and looted, the NDS lost all of its eight vehicles, including the van that was used for distribution of drugs. As a result, delivery of social services, as in other sectors, completely broke down. With the end of the war and installation of a new administration in August 1997, the Government has requested UNFPA to support in revitalising the delivery of RH services in the country.

At present, data on all aspects of socio-economic development in Liberia, including health, is virtually unavailable. It had to be noted that, prior to the onset of the war, Liberia had about 300 functioning health facilities. A survey recently carried out by the MOH in 10 out of the 13 counties showed that 90 percent of these facilities were either looted or destroyed or both. None of the county hospitals outside Monrovia is providing a full range of emergency obstetric care (EmOC). Health services in the rural areas are essentially in the hands of TBAs or untrained personnel. The Liberia Demographic and Health Survey (LDHS, 1986) indicated that the Total Fertility Rate (TFR), Contraceptive Prevalence Rate (CPR) and Infant Mortality Rate (IMR) were 6.5, 8.4 percent and 144/1000 respectively. The DHS also showed that 83 percent of mothers had ante-natal care and 50 percent were assisted at delivery by a doctor or by nurse/or midwife. Over 71 percent had received a tetanus toxoid injection. The health status of mothers and children has obviously deteriorated as a result of the civil war, together with a decrease in CPR, an increase in adolescent sexuality and pregnancy, abortion complications

and STDs infection, including HIV/AIDS.

The NDS, which satisfies 70 percent of the country's drug needs, neither procures contraceptives nor essential RH equipment and supplies. The Family Planning Association of Liberia (FPAL) is essentially the only organisation that procures and distributes contraceptives in Liberia, using IPPF and UNFPA funds.

Strategy and activities

It is proposed to strengthen the management, coordination and monitoring as well as evaluation capacity of the MOH&SW, through activities that enhance capacity-building, such as study tours, involvement in training and collaboration with specialised national institutions. In the early phase of the project, a baseline survey to determine the current CPR, IMR and MMR in the identified counties will be conducted. The FPAL and Division of Statistics of MoH are expected to take responsibility for this task. The MOH will be supported by identified collaborating institutions, including the NGOs and the National AIDS Control Programme (NACP), in arranging for procurement, storage and distribution of RH equipment, supplies, drugs and contraceptives, including condoms. The national referral hospitals will be engaged in training doctors and midwife teams in Emergency Obstetric Care (EmOC), and the training of personnel in the provision of safe anaesthesia and safe blood for transfusion. The trainers will also provide regular supportive supervision to the staff at county hospitals in IEC, counselling and contraceptive technology. The NACP will ensure integration of STD services in RH activities at county level and creation of community awareness programmes on the health risks of HIV infection and the mobilisation of the community in the provision of care to AIDS patients.

To ensure due attention to the community level, the Women in Health Department of the MOH will disseminate information on health education, targeted at both males and females, on key issues like teenage pregnancy, FP and prevention of STDs, including HIV/AIDS. Community-based women and youth organisations will also be mobilised, and training on maternal care, prevention of STDs/HIV and promotion of modern FP methods will be provided for approximately 100 women and youth in the two counties.

FINANCIAL SUMMARY

EDUCATION

PROJECT SUMMARIES Education

Appealing Agency: United Nations Children's Fund (UNICEF)

Activity: Primary school textbooks and curriculum reproduction.

Code: LIB-98-1/N22

Implementing Partner: Ministry of Education (MoE)

Time Frame: January - December 1998

Objectives: To increase national capacity in ensuring the availability and affordability of primary school textbooks in schools. To reproduce significant copies of the revised national curriculum for all schools.

Funds Required: US\$ 1,546,000

SUMMARY

Even before the civil conflict in Liberia, a large number of students, especially those in elementary schools, had no access to reading materials. Only an estimated 20 percent of primary school children, mostly in urban areas, owned textbooks.

For the past several years, there has been an even more acute shortage of textbooks in Liberia. In order to address this critical issue, a proposal was submitted to the EU by UNICEF in 1995 to revise and print elementary school textbooks (mathematics, science, language, arts and social studies). Following the April 1996 crisis in Monrovia, the proposal was considered and the project agreement signed in January 1997. The outcome of this project was the revised textbooks that benefit about 240,000 Liberian children. Additional 80,000 copies will be required, to serve the entire country, after the initial copies are delivered to the MoE.

In order to properly utilise the textbooks, the national curriculum was revised with funding from UNICEF. Copies of the printed curriculum are limited and will require 15,000 additional copies for all schools.

For the complete revitalisation of all primary schools and to make instruction relevant, this project intends to purchase more copies of the revised textbooks as well as reprint additional copies of the national curriculum.

Strategies and activities

The MoE through UNICEF and with EU funding has already revised and updated the primary school textbooks. Contracts have been signed with major publishers and the initial consignments of textbooks are expected to be made in Monrovia by early January, 1998. With additional funding, UNICEF and the MoE expect to increase the number of available textbooks at a minimum cost. It is expected that an additional 20,000 copies for each one of the four subjects will be provided for each grade.

Support will also be provided to the MoE to develop an effective book recycling system at the school level as well as take advantage of existing non-commercial distribution networks.

FINANCIAL SUMMARY	
Budget Item	US\$
Procurement of primary school textbooks	1,360,000
Procurement of additional curriculum	86,000
Distribution costs	50,000
Programme support	50,000
TOTAL	1,546,000

Appealing Agency: United Nations Children's Fund (UNICEF)

Activity: Short-term in-service teacher training programme.

Code: LIB-98-1/N23

Implementing Partner: Ministry of Education (MoE)

Time Frame: January - December 1998

Objectives: To improve the capacity of the MoE in up-grading the professional skills of its primary school teachers through in-service training.

Funds Required: US\$ 242,000

SUMMARY

The Liberian educational system has been plagued with untrained teachers as well as those who had undergone training prior to the civil crisis, but have had no regular refresher courses. The major players for the reactivation and revitalisation of the almost eroded Liberian educational system are these teachers.

UNICEF's efforts in helping to revitalize the school system have concentrated in the area of up-grading the professional standards of the teachers who are currently in the various schools. For the present day primary school teachers to effectively impart knowledge, and manage any classroom situation, they must be exposed to training in pedagogical methodology, basic

trauma counseling and conflict resolution as well as classroom management.

This project will use multi-facet in-service training techniques for the unqualified, under-qualified as well as those who have had professional training, but have been out of the classroom setting for the past seven years.

Strategies

The Teacher Training Department of the MoE will be the main implementing partner of this project. In the absence of pre-service training (whose sites in Zorzor and Voinjama require extensive rehabilitation) and with an under-trained (and sometimes, under-qualified) faculty, short- term in-service teacher training will serve as a complementary means of revitalising the primary schools and improving the quality of education in the classroom.

Teacher training will be enhanced by the provision of educational supplies and textbooks in all revitalised schools.

A series of two-week workshops will be organised per county. Each workshop will focus on teaching methods, classroom management and introduce teachers and headmasters to trauma counselling and peace education. Additional support will be provided to restore the capacity of the two training institutes to provide one month workshops for new teachers that have joined the workshop since the outbreak of war and have never taken part in any structured pedagogical training.

FINANCIAL SUMMARY	
Budget Item	US\$
In-service teacher training workshops/seminars	200,000
Logistics/transportation	30,000
Programme support	12,000
TOTAL	242,000 Appealing Agency: United Nations Children's Fund (UNICEF)

Activities: Minor structural renovation and furniture construction.

Code: LIB-98-1/N24

Implementing Partners: Ministry of Education, UNDP/UNOPS, local NGO

Time Frame: January - December 1998

Objectives: Improve the physical facilities and seating capacity of 150 primary schools through minor structural rehabilitation and the provision of school furniture, benefiting 35,000 children.

Funds Required: US\$ 800,000

SUMMARY

Seven years of war has destroyed most school facilities in the country. Except for the safe havens of Monrovia, Buchanan and Nimba County, where most schools operated, there was little or no reconstruction or renovation of schools. Lessons were conducted in dilapidated buildings or under provisional shelters. In places where buildings existed, there were leaks in the roofs, and lacking windows and doors. There was often limited furniture and, sometimes, none. Teachers, students and community members participated in constructing some form of seats from local materials such as sticks and bamboo.

During the rainy season and adverse weather conditions the teachers and their students had no place to hold classes. As security conditions have greatly improved due to the establishment of the new Government and due to the return of Liberians from neighboring countries and IDP camps, the need to rehabilitate school buildings with minor damage and to construct more furniture will be a major priority.

This project will consider the two components of renovation and furniture as paramount undertakings. UNICEF, in collaboration with UNDP/UNOPS, along with the MoE and some NGOs, will embark on the renovation of schools that have already been earmarked as well as the provision of furniture for students.

Strategies

The proposed intervention will develop strong linkages with the vocational training and re-integration projects of ex-combatants. Some one thousand young persons have graduated from the vocational training programmes in an economy that provides very few opportunities for employment. It is the intention of this project to utilise the services of these young men and women in building classroom furniture, such as benches and tables, and do minor renovations on school buildings within their own communities. The minor renovation component of this project will be closely linked, in geographic scope as well as methodology, to strategies and areas of operation of the UNDP/UNOPS. In addition, classroom teaching will be enhanced by methods of instructions through teacher training and availability of textbooks and educational supplies.

FINANCIAL SUMMARY	
Budget Item	US\$
Minor renovations	50,000
Educational supplies	250,000

Construction of 17,500 seats/benches	470,000
Programme support	30,000
TOTAL	800,000

Activity: Integration of population and family life education (POP/FLE) in Liberian schools and colleges.

Code: LIB-98-1/N25

Implementing Partner: Ministry of Education (MoE)

Time Frame: January - December 1998

Objectives: To improve the health and well-being of Liberian children and youth by institutionalising POP/FLE and family life education into the education system of the country.

Funds Required: US\$ 361,822

SUMMARY

The war has turned hundreds of young teenage girls into sex commodities, many of whom have been abused sexually. The Government considers the education of over 800,000 in-school students a top priority. In this regard, POP/FLE will be revived as a viable intervention to combat the increasing incidence of teenage pregnancies, clandestine abortion, STDs including HIV/AIDS, drug abuse, and the traumatic effects of war, all of which in turn increase school drop-outs. The Government intends to target primary and secondary school students in the next 13 months with POP/FLE in order to develop responsible attitudes and behaviour in reproductive health matters among the students aimed at improving their quality of life. Therefore, the Government is requesting UNFPA's assistance in funding the implementation of POP/FLE in 75 schools in five counties.

Strategy

The proposed programme on POP/FLE will be developed in three phases: i) foundation between 1997-1998; ii) nation-wide implementation between 1999-2001; and, iii) consolidation and sustain ability from 2001 and beyond. It will use both the formal curriculum approach and extra-curricular activities and counselling approach to reach students and teachers. It further proposes to use science, social studies, biology and mathematics as the host subjects for integrating POP/FLE into the school curriculum. It will also promote peer education and counselling through School Health Clubs.

Major activities will include: a) development and dissemination of curricula, instructional and

counselling materials for students and teachers; b) capacity-building through training of project managers, national resource persons and school-level implementors; c) advocacy through sensitisation of principals to gain their support; d) peer education and counselling through strengthening school health clubs; e) continuous monitoring and evaluation of project implementation and impact; f) collaboration with partners in other population and reproductive health programmes and projects; g) coordination of in-school POP/FLE by the Division of School Health - POP/FLE in the Ministry of Education.

FINANCIAL SUMMARY	
Budget Item	US\$

Sub-contract	69,676
Training	192,326
Equipment	55,250
Miscellaneous	11,800
TOTAL	361,822

PROJECT SUMMARIES Children in Especially Difficult Circumstances

CHILDREN IN ESPECIALLY DIFFICULT CIRCUMSTANCES

Appealing Agency: United Nations Children's Fund (UNICEF)

Activity: Accelerated formal learning for older students.

Code: LIB-98-1/N26

Implementing Partners: Ministry of Education (MoE) and education sector NGOs

Time Frame: January - December 1998

Objectives: In the four counties of Montserrado, Bong, Lofa and Nimba, target 15,000 "older" out of school children and quickly mainstream them into their normal age group or level at regular school.

Funds Required: US\$ 380,000

SUMMARY

The educational system prior to the seven-year civil crisis was already beset with problems which lingered on through the duration of the war. This educational ailment may have an adverse effect on the revitalisation of all schools, especially primary schools. During the period of the civil war, many of the children were either directly or indirectly involved in the fighting which has led to all children being somewhat affected by the war. The fluid security situation, coupled with the constant movement of families and people to safe havens, have resulted in a large number of children not being able to enroll in schools. On the other hand, some children had to leave school for various reasons and are now older than the regular primary school age (5-12).

From the data on demobilisation, 15 percent of demobilised children are under age 15, while about 80 percent of all demobilised children indicated that they wanted to go to school again.

The initial re-integration projects emphasised short-term literacy, counseling and vocational training followed by job placement or self-employment in the informal sector. This approach, while highly successful for older teenagers (16 - 18 years of age) has serious practical and moral lacunae for the 9-15 age group. This group should be in school.

Presently, there are over 15,000 children who fall into this category of students. Field assessments, discussions and interviews with these children, their guardians, education authorities and community people have shown many indications that these children want to return to school. However, their advanced age has put them at a disadvantage for a regular primary school six-year cycle.

Strategies

To meet the education demands of these disadvantaged children (ages 8-15), accelerated learning programmes will be instituted through collaboration with the MoE and other education-related organisations to prepare the children for entry into regular primary school. Accelerated methodologies, such as multi-grade teaching and individualised instruction, will be utilised in order to enable teachers to deal with individual students more at their own pace. In addition, extra hours will be allocated to this special group of students after the normal session. A skill-based rather than cognitive-level approach will be utilised and standard tests developed to monitor the readiness of each student to progressively move to their "normal" age group level.

Activities

- Programme Development:

These students will follow the normal school curriculum. However, a normal grade-1 programme will now be covered in three to four months. As a result, an accelerated format and teachers' guides will be developed.

- Teacher Training:

Based on the teachers' guides and the accelerated programme, a training

programme will be developed and integrated into the on-going In-service Teacher Training Programme.

- **Procurement of Materials & Supplies:**

These will be undertaken in order to accommodate the expected larger intake. Schools through MOE will be encouraged to waive the usual fees until such time when the child reaches the normal age and performance level.

FINANCIAL SUMMARY	
Budget Item	US\$
Development of the accelerated programme	75,000
Special training of teachers	55,000
Personnel cost	100,000
Materials and supplies/equipment	40,000
Logistics & transportation	50,000
Programme support	60,000
TOTAL	380,000

PROJECT SUMMARIES Water and Sanitation

WATER AND SANITATION

Appealing Agency: United Nations Children's Fund (UNICEF)

Activity: Safe water supply and improved sanitation.

Code: LIB-98-1/N27

Implementing Partners: UNICEF and local NGOs

Time Frame: January - December 1998

Objectives: To increase access to safe drinking water and proper sanitation facilities in rural and peri-urban communities, where an estimated 200,000 returnees are expected, by constructing and improving water and sanitation facilities, disseminating hygiene/health education messages, and building local capacity through 'on the job' training for local NGOs.

Funds Required: US\$ 2,000,000

SUMMARY

Before the civil war in 1990 the Ministry of Rural Development (MRD) undertook the construction of about 1,700 wells (mainly boreholes), equipped with hand pumps, under various water projects. Nevertheless, 77 percent of the rural population lacked access to safe drinking water, a situation which was further exacerbated by the seven years of war. This resulted in a backlog of maintenance, resulting in only 12 percent of the rural population having access to safe water supply. The sanitation situation, not good in the best of times, is even more precarious with institutional latrines at schools and clinics in various stages of disrepair, while family and community latrines are few to non-existent in most rural communities. The rural sanitation coverage is only 2 percent which is much lower than the 10 percent pre-war coverage. Increased pressure due to anticipated return to rural areas is likely to increase already high risks of diarrhoea/cholera, and other water-borne or environment-related diseases.

Strategy

The UNICEF intervention is targeting counties which least served and in greater need of safe water and excreta disposal facilities, such as in Central, Northeastern and Northwestern regions. Specific districts of high density (resident as well as anticipated returnee population) and present low access will be targeted for additional water points and proper sanitation. Local capacity will be built by working through area-based NGOs, community residents, returnees and former combatants conducting on-the-job training. Locally available, low-cost materials, as well as appropriate and acceptable technology will be used to ensure that coverage is extended to the maximum number of beneficiaries. Community participation will be the basis of the project implementation, as well as continuous promotion and reactivation of village "WATSAN" committees. Village Level Operation and Maintenance (VLOM) technology, equipment and facilities will be promoted by training village hand pump caretakers and mechanics including sanitation supervisors. Special attention will be given to proper sanitation. Health and hygiene education, animation and social mobilisation to enhance awareness and organisation of community members to dig pits and construct superstructures for family latrines, will be the basis of this intervention.

Activities

UNICEF, in collaboration with local NGOs, will support the construction of 7,000 VIP family latrines; 50 institutional latrines to serve communities, schools and health centres; and 270 hand-dug wells. Additional 20,000 wells will be disinfected and 500 hand pumps replaced or repaired. Two hundred communities will be mobilised to carry on water, sanitation and hygiene-related activities. Hygiene and health education messages will be disseminated in 200 communities, and WATSAN committees reactivated or organised. Two hundred village-based hand pump mechanics and caretakers including 50 sanitation supervisors will be trained.

UNICEF, in collaboration with the Control of Diarrhoeal Disease (CDD) Task Force, plans to continue well disinfection, through organised community chlorination teams led by the Ministry

of Lands, Mines and Energy (MLM&E), Ministry of Rural Development (MRD) and NGOs; UNICEF will promote self-chlorination using household bleach, monitor water quality through bacteriological tests to ensure use of safe water and closure of contaminated wells; undertake mass hygiene/health education campaigns to increase awareness; support proper disposal of garbage in peri-urban communities (community-based house to house) where unsanitary means of garbage disposal poses a serious health risk.

FINANCIAL SUMMARY	
Budget Item	US\$
Construction of 50 institutional latrines	200,000
Support to 7,000 VIP family latrines construction	700,000
Construction of 270 wells	580,000
Repair and/or replacement of 500 hand pumps	100,000
Chlorination of 20,000 open wells	50,000
Hygiene/health information dissemination	50,000
Training of 200 mechanics, caretakers & sanitation supervisors	20,000
Operational support	300,000
TOTAL	2,000,000

PROJECT SUMMARIES Coordination, Monitoring and Information

COORDINATION, MONITORING AND INFORMATION

Appealing Agency: United Nations Development Programme for the UN Resident Coordinator

Activity: Coordination of humanitarian assistance.

Code: LIB-98-1/N28

Implementing Partner: UNDP

Time Frame: January - December 1998

Objectives: To support UN Agencies and the NGO community to address outstanding humanitarian needs and to assist the Ministry of Planning (MoP) and NGOs to establish coordination mechanisms within the relief community.

Funds Required: US\$ 393,730

SUMMARY

In the new Liberian climate of stability there is an improved operating environment for the delivery of assistance to those groups considered to be still in need. These include the vulnerable, such as children, female-headed households, the elderly and the handicapped. This category also includes those communities where, due to poor infrastructure and the impact of the rains, have received minimal assistance during the conflict and continue to demonstrate needs. While there continues to be a need for humanitarian assistance, the emphasis is shifting from emergency assistance towards recovery and sustainable development.

Since 1995, UN-HACO has been responsible for the coordination of humanitarian assistance, in addition to its role in the demobilisation exercise. During its tenure, HACO provided a central point where the NGOs, donors and UN Agencies met regularly to share information and consolidate their responses to the crises. In its coordinating capacity, HACO also disseminated information, maintained media relations and promoted the principles of humanitarian assistance. Analytical tools such as vulnerability mapping and the maintenance of a humanitarian database also facilitated the delivery of assistance.

With the departure of HACO, a small unit with two international officers and one national officer has been established under the Resident Coordinator to continue to coordinate and provide support to the relief community. This unit will lay the foundation for the transfer of coordination responsibilities to the Government in the longer term. It will continue to provide a central point for the sharing of information and maintain those fora which the relief community, in consultation, consider useful. The humanitarian database will also be maintained and the coordination unit will ensure the update and dissemination of data.

In addition, the coordination unit will liaise with the relevant Government agencies and the NGO community to revise NGO guidelines to facilitate the transition from emergency operations towards capacity-building and development of a decentralised mechanism to coordinate NGO assistance. To this end, support will be provided to the NGO coordination unit within the MoP to enable it to monitor activities and play an increasingly active role in the delivery of assistance. The increased engagement of the Government is the hallmark of this period between complex-emergency and recovery.

Through this unit, assessment missions will be undertaken on a regular basis to ensure that needs, when identified, can be quantified and met effectively, in addition to establishing an early warning mechanism. Reporting will be through the sectoral committees at the level of the line ministries through the Office of the Resident Coordinator. On a regular and frequent basis, the Donor community, UN Agencies, International Agencies and NGOs will be briefed on all activities as they relate to the delivery of humanitarian assistance.

The process of co-ordination and the shift towards development will be evaluated through joint workshops involving the relief community and the government.

FINANCIAL SUMMARY	
Budget Item	US\$
Staff costs: International officers x 2 National officer x 1 Secretary Driver	247,730
Workshops: Revision of international NGO guidelines with Government Transition to recovery	5,000
Support to NGO Coordination Unit within the MoP	10,000

Communications: Handsets and high frequency radio for vehicle	6,000
Information dissemination: Software Radio spots/media Information bulletins Public Information	10,000
TOTAL	393,730

Appealing Agency: Food and Agriculture Organization of the United Nations (FAO)

Activity: Strengthening the co-ordination of emergency and recovery assistance to the agricultural sector.

Code: LIB-98-1/N29

Implementing Partners: Ministry of Agriculture (MoA), FAO, NGOs

Time Frame: January - December 1998

Objectives: To assist the MoA in designing a strategy to co-ordinate the support to the sector

during the transitional period from emergency to rehabilitation.

Funds Required: US\$ 292,000

SUMMARY

The country's economic and administrative infrastructure has been totally destroyed during the seven years of civil war. As a result, the humanitarian community still provides the bulk of goods and services directly to the population of Liberia. A large number of international organisations are supporting the supply of seeds and other agricultural inputs and the activities are co-ordinated by the STC, composed of representatives of the European Commission (EC), USAID, FAO, International NGOs and the MoA. Through project TCP/LIR/5611 (E) 'Emergency assistance to conflict affected farmers in Liberia', FAO has supported the activities of the existing co-ordination mechanism. Now, that the security situation permits, co-ordination capacity at the regional level needs to be created and/or strengthened. Close monitoring of the situation in the field, is of particular importance, during the transitional period from emergency to recovery. Degrees of vulnerability vary greatly between counties and districts, requiring a more diversified approach if assistance is to be effective.

Though still severely constrained by the lack of even basic facilities, the MoA will soon have to take full charge of the co-ordination role. In this regard, the project will assess the training needs of MoA staff at head office and field level, most of whom had to discontinue work during the war period.

To perform the above-mentioned tasks, an international expert will be assisted by a national agronomist and field officers.

FINANCIAL SUMMARY	
Budget Item	US\$
International agronomist (6 months)	90,000
National agronomist (18 months)	27,000
National field officers (15 months)	15,000
Equipment 1 4x4 vehicle, field and office equipment	50,000
Training	30,000
Operational support	80,000
TOTAL	292,000

Appealing Agency: Food and Agriculture Organisation of the United Nations (FAO)

Activity: Establishment of a Food Security Support Unit to collect and process data relevant to food security and nutrition.

Code: LIB-98-1/N30

Implementing Partners: Ministry of Agriculture (MoA), FAO, NGOs

Time Frame: January - December 1998

Objectives: To provide timely and essential information on agricultural production and food security to the international community and relevant national authorities, to improve emergency interventions and crisis prevention.

Funds Required: US\$ 304,000

SUMMARY

Due to the complete collapse of the centralised data-collection, analysis and dissemination system on agricultural production and food security, the available information to the international community and national authorities is limited, imprecise and often unreliable. This has impeded planning, implementation and evaluation of relief interventions, and will be a critical factor in the prevention of future food crisis.

The project will work in close co-operation with the WFP, other agencies and NGOs active in the field. It aims to re-establish a simple system to collect, analyse and report food security-related information by monitoring relevant variables such as rainfall, crop and livestock production, input supplies, pest and diseases, market prices and access to markets, food stocks, food imports (commercial and aid), consumption levels, nutritional status, population movements and groups at risk. During the past years, aid agencies have carried out a lot of work in this regard, and the information needs to be pooled. As these tasks will fall under the responsibility of the MoA, as soon as their field offices become functional again, the project will undertake to provide the training.

The project is of particular importance as a complementary activity to the Special Programme on Food Security, presently being formulated by the MoA.

Activity: Information coordination and dissemination.

Code: LIB-98-1/N31

Implementing Partner: DHA

Time Frame: January - December 1998

Objectives: To continue in improving the flow of information in the region; enhance understanding of its problems; and, re-enforce effective programming and contingency planning.

Funds Required: US\$ 746,338

SUMMARY

The Integrated Regional Information Network (IRIN) for West Africa was established in June 1997 by DHA to cover events impacting on the humanitarian situation in the West Africa region. Its main focus has been the crisis in Sierra Leone and the Liberian transition to democracy. While IRIN has yet to fully develop its potential, it manages a dynamic feed of information to and from NGOs, national authorities, UN Agencies, Donors, human rights organisations, political parties, regional institutions, academia and the media. News material is gathered from information officers working in the UN Resident Coordinators' offices, as well as by IRIN-West Africa's own staff. IRIN-West Africa prepares updates and special briefs that cover the range of political, economic and social issues which affect humanitarian work in the region. A key objective is to ensure that subscribers benefit from better access to information which is already available, including access to regional analysis.

Appealing Agency: United Nations Fund for Population Activities (UNFPA)

Activity: Conducting a national demographic and health survey in Liberia.

Code: LIB-98-1/N32

Implementing Partner: Ministry of Planning and Economic Affairs (MoPEA)

Target Population: 7,000 households nationwide, with emphasis on men and women of

reproductive age

Time Frame: January - December 1998

Objectives: To generate detailed data on the country's socio-demographic statistics including health and characteristics of the population of Liberia to contribute towards the construction of a population database for socio-economic development planning, as well for monitoring and evaluating of population policy; To contribute towards institutional capacity-building for the future conduct of national statistical activities, especially the next population and housing census, tentatively scheduled for 2002.

Funds Required: US\$ 297,000

SUMMARY

The civil war has affected policy-making capabilities since the precise magnitudes of population structures and processes is unknown. Following the extensive loss of human lives and the population movements caused by Liberia's seven-year civil war, the data from the last population and housing census (1984) and other subsequent demographic surveys are no longer reliable for development planning. There is, therefore, a strong and dire need for accurate socio-demographic statistics that can facilitate planning and implementation of development programmes within the context of the recommendations of the International Conference on Population Development (ICPD, 1994). Hence, the Government of Liberia has requested assistance from UNFPA to conduct a national Demographic and Health Survey (DHS) in 1998.

Strategy

The DHS will be based on a probability sample of 7,000 households and, within each selected household, all eligible individuals will be interviewed. The sample will cover all areas and appropriate sampling procedures will be employed to ensure adequate representation in urban and rural areas. The major topics for the survey will include demographic characteristics of the population, RH, education, economic activities, gender, shelter and availability of social services. One structured questionnaire, divided into various sections, will be administered to all selected households.

A number of inter-related activities, grouped into four phases, will be undertaken:

- i) The preparatory phase will involve: establishment of appropriate committees that will implement the survey; determination of data needs and hence, major topics for inclusion in the survey; and, designing and production of survey instruments;
- ii) Sample design and sample selection will cover development of a sample design and selecting enumeration areas (EAs). A two-stage stratified cluster design, using the 1984 population census EAs as sampling frame, will be adopted;
- iii) The enumeration phase will include recruitment and training of field staff, deployment of

staff in various EAs and data-collection. To ensure due consideration to special gender concerns, efforts will be made to recruit an equal number of female and male enumerators, to the extent possible.

iv) The post-enumeration activities will entail preparing data processing plans and requirements, developing programmes and editing rules as well as producing the required tables.

FINANCIAL SUMMARY

TOTAL	297,000

ANNEX I.

FINANCIAL SUMMARIES OF THE 1997 APPEAL

ANNEX II.

INTERNATIONAL COMMITTEE OF THE RED CROSS

The Liberian peace process has made great strides. The Abuja accord signed by the NPFL, ULIMO-K, ULIMO-J and a coalition of anti-NPFL forces in August 1996 has been implemented. According to official figures, over 20,000 fighters have been disarmed and demobilised and some 60,000 weapons surrendered.

Elections were held on 19 July 1997. There was a high turn-out and international observers were satisfied with the conditions under which they were held. Following a sweeping victory, Charles Taylor was sworn in as Liberia's 21st president on 2 August.

Nevertheless, the new government faces a formidable array of problems and challenges. After seven years of unabated strife, more than a quarter of the population still lives outside Liberia, mostly in Côte d'Ivoire and Guinea. The country's infrastructure has been devastated and there is an estimated 80 percent unemployment rate. During the years of conflict Liberia was completely dependent on the international donor community, and humanitarian agencies have provided a safety net for many sectors of the population. Thousands of former combatants, including child soldiers, must be re-integrated into society. Arms caches have been discovered by ECOMOG and more are believed to be still in circulation.

At the end of 1996 the ICRC returned to Liberia on a permanent basis, after an eight-month period during which it followed the situation by means of regular missions from Freetown. It consistently condemned the flagrant violations of humanitarian law during the conflict, including extrajudicial killings, ill-treatment, looting, use of excessive force and forced recruitment of children.

Since end of 1996 the organisation has been focusing on protection activities. It has been monitoring a group of Sierra Leonean former RUF combatants who sought refuge in Bopolu, Lofa County, although as normality returns, this protection will no longer be necessary. The ICRC has been visiting imprisoned ex-combatants, monitoring conditions of detention and making improvements in Monrovia Central Prison. It has also been making interventions aimed at obtaining access to individuals in ECOMOG custody, though with limited success.

The Red Cross message network, run in cooperation with the Liberian National Red Cross Society (LNRCS), has been considerably expanded to cover 40 locations nationwide, from four last year.

A large number of international and national humanitarian agencies are now present in Liberia to carry out health, water and sanitation, food and agricultural programmes. In cooperation with the LNRCS, the ICRC is running a mobile clinic which tours camps for the internally displaced and inmates in Monrovia Central Prison, giving an average of 140 consultations a day. It is also supporting five LNRCS-run clinics by acting in an advisory capacity and providing financial, material and training back-up. Its water and sanitation programme to chlorinate and repair wells helps to prevent waterborne diseases by supplying the resident and displaced population of Monrovia with safe drinking water.

As the country is slowly returning to normal, the ICRC intends to scale down its activities and number of expatriates in Liberia. It will nevertheless remain in the country for the time being as the ongoing presence of international ECOMOG troops demonstrates a general and regional concern as to the stability of the country. In addition, there is a real danger that the conflict in neighbouring Sierra Leone could spill over to Liberia, as the two countries' politics and problems are historically closely inter-related. Issues related to people in detention need careful attention; in 1998 the ICRC will concentrate on these, as well as on protection of the civilian population.

MAJOR ACTIVITIES PLANNED FOR 1998

Protection

develop contacts with relevant government agencies and groups with a view to following up the situation of the civilian population and intervening with the appropriate authorities if need be;

- follow-up on the establishment of a penitentiary system and obtain access to any detainees falling within the ICRC's mandate;

- in cooperation with the LNRCS, maintain a Red Cross message service for Sierra Leonean refugees and unaccompanied children, and restore links between separated families;
- cooperate with other agencies in the region on the issue of unaccompanied children, with a view to reuniting them with their families.
- Dissemination / Information
 - conduct dissemination sessions on the basic rules of the law of armed conflict and humanitarian principles for the armed forces, ECOMOG and law enforcement services; encourage the incorporation of humanitarian law into regular training for the armed and security forces;
 - together with the LNRCS, promote awareness of humanitarian values in schools and vocational training centres; together with local experts and artists, explore ways and means to promote such values via radio plays, story-telling, etc.;
 - inform government agencies of current developments regarding humanitarian law and encourage them to adhere to newly drafted instruments of such law;
 - provide teaching on humanitarian law in higher education establishments and to local human rights NGOs.
- Health activities
 - monitor health conditions and treatment of any detainees visited, provide adequate medical treatment in all facilities where detainees are visited by means of the ICRC/LNRCS mobile clinic; extend the vaccination programme to rural areas;
 - repair and maintain the water and sanitation installations built and managed by the ICRC and 1,000 others under its responsibility until the authorities can take over; construct latrines and dig wells for newly displaced people and at medical facilities run by the ICRC or the LNRCS; launch an information campaign on preventive measures in Monrovia and through the LNRCS clinics outside the city.
- Relief activities
 - assist displaced people with basic non-food items in case of emergency.

Cooperation with the National Society

- support the LNRCS operation of the newly expanded Red Cross message network by providing material, financial and technical assistance, with the aim of increasing the capacity of the national staff to work on an autonomous basis;
- in preparation for the hand-over of all health programmes to the National Society, continue to support LNRCS-run primary health care clinics, with the emphasis on technical know-how and management; encourage them to carry out vaccination campaigns and train local staff in community health care;

- continue support to the ICRC/LNRCS mobile clinic system in Greater Monrovia, which provides displaced people and detainees in Monrovia Central Prison with basic health care;
- encourage the LNRCS to organise its dissemination department and supply it with material and financial support.

ANNEX III.

INTERNATIONAL FEDERATION OF RED CROSS AND RED CRESCENT SOCIETIES

INTRODUCTION

Seven years of civil war in Liberia resulted in the loss of over 200,000 lives, forced 870,000 into exile as refugees and displaced 1,000,000 people. The destruction of much of the infra structural, socio-economic and political structures of the country made many others vulnerable, particularly women, children, the elderly and the handicapped. Water and sanitation conditions are alarming and dugout wells and streams are the main sources of water. Some 70 percent of all houses were destroyed during the war and families can be seen clustered in makeshift, poorly roofed huts all over the country.

The conflict was ended by a peace agreement in August 1996 that allowed the regional peace keeping force (ECOMOG) to disarm over 30,000 ex-combatants throughout the country. Presidential and legislative elections were held in July 1997, followed by the inauguration of the president-elect, Charles Taylor. These developments have paved the way for the resettlement, rehabilitation and re-integration of returnees, IDPs and other vulnerable groups. Over 500,000 refugees are expected to return home as a result of the improved political situation, further stretching infrastructure.

In neighbouring Guinea there are some 650,000 Liberian Refugees, some of whom are particularly vulnerable and require both food and welfare assistance. The number of refugees sheltering in Côte d'Ivoire is falling, but in the early part of 1998 the Federation estimates that 80,000 people will be in receipt of assistance.

The Operation

The Liberian Red Cross Society (LRCS), with International Federation support, will continue to reactivate and strengthen the Chapters and Branches in all thirteen counties enabling it to assist in the resettlement, rehabilitation and re-integration of IDPs and returnees. The National Red Cross Society will also continue to support the present Sierra Leonean refugees and be prepared for a major influx of refugees if the situation further deteriorates in Sierra Leone. The institutional capacity of the National Society will be further strengthened.

A joint UN/NGO assessment in April 1997 stressed the needs of health facilities, shelter, food security and income-earning capacity as the obvious needs of 90 percent of the country's 960,000 rural inhabitants. In May 1997, the LRCS undertook a nation-wide rapid assessment mission and has targeted 350,000 returnees, internally displaced persons, war-affected women, children, elderly and other vulnerable groups throughout the 13 counties of Liberia for health, relief, resettlement, rehabilitation and re-integration programmes in 1998.

Objectives in 1998

These are designed in line with the International Federation's Strategic Work plan for the Nineties and the 1996 Kampala Declaration of African Red Cross Societies which states that relief efforts will "build upon the capacities of the affected population and integrate developmental activities ... where government services and the rule of law and order have broken down, National Societies will continue to provide humanitarian services".

- To enable 350,000 former IDPs, returnees and other vulnerable groups to resettle into their original communities throughout the 13 counties of Liberia in 1998;
- To provide basic health, water and sanitation and agriculture-based services to 350,000 former IDPs, returnees, women, children, elderly and other vulnerable groups;
- To provide basic health, water/sanitation and relief services to 30,000 Sierra Leonean refugees in west and south-western Liberia;
- To strengthen the service delivery capacities of LRCS chapters;
- To support dissemination activities with a view to increasing knowledge of the Red Cross Movement and the activities of LRCS.

Plan of Action

Relief:

Shelter material, basic household utensils and second-hand clothing will be provided to

350,000 former IDPs, returnees, orphans, women, children, elderly and other vulnerable groups throughout the country to assist in their resettlement; 2,000 sets of gardening tools and seeds will be provided to single mothers and elderly persons to build their food security and income generating capacities, as well as shelter material and household utensils; seeds and farming tools will also be given to 1,200 families (6,000 beneficiaries) in 60 communities.

Vocational Education Centres in Red Cross schools will be established for 500 school dropouts, ex-combatants and abused women, as will a day care centre in Montserrado Chapter for 250 less fortunate and war-affected children. The provision of materials to 13 LRCS-operated schools will be continued and 13 Chapter relief depots will be established to enhance Disaster Preparedness capacities. Food, non-food and shelter support to 30,000 Sierra Leonean refugees in Lofa and Grand Cape Mount counties will be continued.

Health:

Nine existing clinics at Headquarters, eight Chapters and two health posts at transit points in Nimba and Montserrado counties will continue operating; the medical laboratory facilities at the LRCS' Headquarters will be upgraded for income-generating purposes; a mini-medical laboratory in Gbarnga will be established to serve as the main laboratory extension to the north-west, Central and north-east regions and the reopening of the LRCS Central Blood bank in 1998 will be planned.

The establishment of water and sanitation units at zonal offices of the LRCS will take place; the ambulance service programme in Monrovia will keep running; 350 relief, health, water and sanitation volunteers will be trained as part of the integrated health approach, and 300 wells rehabilitated and 150 latrines constructed in vulnerable communities.

Institutional Development:

The LRCS, with Federation support, will prepare an employees' handbook and other relevant policy documents for staff and volunteers; update monitoring and co-ordination plans; acquire and refurbish the headquarters buildings in Montserrado, Bong and Grand Gedeh to serve as zonal offices; provide them with radio communication equipment; provide Chapter and Branch co-ordination training for zonal office staff and volunteers.

Budget See table below.

Capacity

LRCS has reactivated all 13 Chapters and reconstituted its leadership structures, reducing its staff to 13 and extending its services to Chapters through field officers responsible for overseeing project implementation. It also reconstituted its governance structure with a corps of newly- elected officers.

The LRCS' Headquarters building has been partially renovated and communication facilities set up. The Federation delegation numbers four expatriate delegates.

Co-operation

In Liberia WFP provides food items for its distributions. The LRCS has concluded plans with UNHCR for the provision of relief and health services to Sierra Leonean refugees in Grand Cape Mount and Lofa counties. The LRCS plans to initiate a Gender Promotion Project in 1998 with possible financial support from the Spanish Red Cross.

FINANCIAL SUMMARY			
Budget/Project	Development Programme	Relief Programme	Health Programme
Shelter and construction	37,000	848,000	353,000
Clothing and textiles	2,703,000	3,000	
Foods & seeds	255,000	12,000	
Water	2,000		
Medical & first aid	147,000		
Teaching materials	9,000	41,000	81,000
Utensils & tools	584,000	22,000	
Other relief supplies	51,000		
Supplies S/TOTAL	46,000	4,482,000	620,000
Vehicles	47,000	141,000	140,000
Computers & telecom	110,000	40,000	49,000
Medical equipment	439,000		
Other cap. expenditures	49,000	17,000	10,000
Capital Expenses S/TOTAL	206,000	198,000	638,000
Transp. & Storage S/TOTAL	49,000	277,000	69,000
Personnel (delegates)	38,000	239,000	121,000
Personnel (local staff)	15,000	105,000	56,000
Personnel (support costs)	40,000		
Personnel S/TOTAL	53,000	384,000	177,000

Travel & related expenses	42,000	3,000	
Information expenses	28,000	27,000	12,000
Administrative expenses	2,000	191,000	83,000
External workshops & seminars	81,000	36,000	43,000
General & admin. S/TOTAL	111,000	296,000	141,000
Secretariat support	213,000	25,000	
TOTAL ASSISTANCE SOUGHT	465,000	5,850,000	1,670,000
GRAND TOTAL FOR LIBERIA OPERATION:		CHF 7,985,000	

ANNEX IV.

INTERNATIONAL NON-GOVERNMENTAL ORGANIZATION JOINT POLICY OF OPERATIONS

BACKGROUND

The international NGO Joint Policy of Operation (JPO) arose from a culmination of events going back to the beginning of civil war in Liberia. The concern for the fate of the civilian population, the worrying pattern of violations, the difficulties faced by humanitarian actors of delivering vital humanitarian assistance, and repeated losses inflicted on the humanitarian community, forced serious reflection on the most appropriate manner of providing assistance to the people of Liberia.

By 1995, coordination with the humanitarian community had developed substantially leading to the formulation of the "Humanitarian Assistance Principles and Protocols for Operation". Most humanitarian agencies working in Liberia signed up to this document.

The events of April 1996 crystallised the need for international NGOs to reduce the potentially harmful effects of humanitarian assistance. The development of a JPO formalised a mechanism for achieving this. Through this document, international NGOs affirmed their resolution to be united and coordinated in delivering humanitarian aid. The JPO was distributed and promoted to the wider humanitarian community, nationally and internationally.

In view of the changing situation in Liberia since that time, the JPO has been reviewed and revised on a number of occasions, with input from the humanitarian community.

Demobilisation, the election of a recognised government and improved stability have led to access throughout the country, to an increase in the number of international NGOs providing assistance and to a shift from emergency to transitional and development programming.

At a workshop held in September 1997 in Monrovia, international NGOs affirmed their belief that an evolving JPO continues to play a key role in monitoring and improving the quality of humanitarian assistance in Liberia. The JPO had succeeded in improving joint assessment methods, “agreed to needs”, self-regulating mechanisms, transparency, and co-ordination within the humanitarian community.

The international NGOs therefore confirmed their resolution to be united and co-ordinated in delivering humanitarian aid, to strengthening co-ordination efforts with all parties, and to providing programmes of the highest quality to strengthen the peace and reconciliation process. They agreed that the JPO should continue to be regularly reviewed in order to ensure its relevance to the changing environment and its ability to positively impact on humanitarian assistance in Liberia. In addition, international NGOs reaffirmed their commitment to following the “Humanitarian Assistance in Liberia Principles and Protocols of Operation”.

Mission Statement

The international NGO community will work toward improving access to clean water, food, health care, shelter, education, civil rights, a secure environment and economic opportunity, to beneficiaries throughout Liberia. In doing so, international NGOs, will actively work towards minimising the potentially harmful impact of humanitarian interventions. The revised JPO provides a framework to achieve these objectives as follows:

PROGRAMME ACTIVITIES

By identifying and supporting local capacities for peace

Existing and potential peace and reconciliation efforts initiated at or through the local community level will be identified and supported through relevant programme activities.

By supporting local communities to empower and ensure self-sufficiency

The international NGO community will strive to encourage and utilise community-based structures and capacities to promote self-reliance.

By conducting regular monitoring and evaluation of programme activities

international NGOs will continuously monitor and evaluate their programmes to ensure compliance to the above commitments, to ensure that humanitarian interventions reach targeted beneficiaries, and to minimise the misuse of assistance.

By promoting the “Do No Harm” approach in all our programmes

Potentially harmful effects of assistance can hinder the peace and reconciliation process and will therefore be minimised through a variety of key strategies included analysis and evaluation of programmes, and a common approach to needs assessment and targeting to ensure equity of access to a balanced geographic spread of assistance throughout Liberia.

CO-ORDINATION

By continuing with self-regulating and co-ordination mechanisms

The Monitoring and Steering Group (MSG) comprising the heads of all international NGOs working in Liberia will meet regularly, to ensure transparency and collaboration for all activities, review and recommend new interventions and share information about current programmes and plans for the future.

By strengthening and improving co-ordination with other parties

International NGOs will continue and strengthen co-ordination of activities with the government, UN agencies, donors, local and national NGOs, and Community-Based Organisations.

ADVOCACY

By actively supporting humanitarian objectives through advocacy

International NGOs represented on the Monrovia Advocacy Group (MAG) will advocate for the promotion and protection of human rights and civil liberties, peace and reconciliation, and the support of programme objectives. The advocacy strategy will be assessed regularly by the MAG in consultation with the MSG.

ANNEX V.

RISK MAPPING

Each of the maps in this Annex represent a vulnerability factor that has been analysed. Each factor is explained below.

Percentage of Locations Accessible by Road:

Level of accessibility affects not only interventions to assist the population but also the community's coping mechanisms such as access to markets and the availability and prices of food and consumer goods. Based on collected data on road conditions and the reported difficulties of sustaining an intervention, a qualitative estimate of the level of accessibility within each district was derived. This estimate also accounted for access to the district using the current worst case scenarios (e.g., the rainy season). Accessibility was ranked according to percentage of locations within the district accessible.

Probability for Communal Friction:

Re-integration of displaced populations always has the potential of aggravating underlying divisions within a community. The potential for such occurrences also increases when there is a shortage of shelter, land and other resources necessary to re-establish normal life.

Communal friction information was drawn from historical ethnic enmities, socio-economic resentment, Sierra Leonean elements and demobilised combatants. Implementing organisations must be cognisant of these communal divisions in regard to implementing inclusive programmes.

Ratio of Total Returning Population to Current Population:

A community-based re-integration programme necessitates understanding the population with which one deals. Measuring refugee returns and IDP returns separately, ignores the impact of total population movements on existing populations. Measuring the relative ratio of returning population to current population gives the assistance community an indicator of this impact. Estimating this impact would be useful in determining the absorptive capacity of the existing population and hence the need and type of interventions.

Disruption Factor:

Civil strife has different effects on populations and their well-being. This factor attempts to portray the affects of the war on both infrastructure and on the psycho-social well-being of individuals and communities. Acknowledging that some areas of the country were more affected than others required some way of representing this in a comparative manner. The community aspect is vitally important to community-based assistance and development programs. A dysfunctional community is not a ready candidate for such programmes.

Access to Humanitarian Aid:

This section is under technical review by the relevant sectoral committees. Humanitarian aid plays a vital role in reducing the vulnerability of a population in both the short- and long-term. Aggregate figures or cumulative assistance in an area would be very useful in evaluating these sectors, however most records were destroyed in April 1996.

Total Agricultural Tools Distributed to a District in 1997 on a Per Capita Basis:

Measures the relative availability of agricultural tools in a district on a per capita basis.

Primary Health Care Service Ratio:

Service ratio is a population driven tool to determine a population's relative access to health care. Areas deficient in health care facilities will have a lower ratio. Planning efforts can focus short term interventions based on these deficiencies.
