CHAD: Humanitarian Profile - 2006/2007

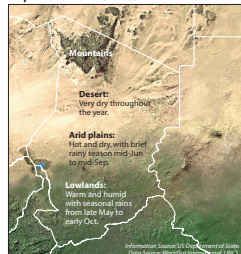

Map 1. Security Incidents (Dec 2005 - Jan 2007)

In 2006, the security situation has sharply deteriorated in eastern Chad. Clashes between Chadian security forces and chadian rebels, incursions of janjaweed militias and armed groups from Sudan, attacks on villages and killing targeting of civilian population, banditry and attacks on humanitarian organisations have all increased. The deteriorating security environment has resulted in limited and sporadic access thereby hampering humanitarian operations in affected areas. Tension also continued to mount over Chad's accusation of Sudan of arming and financing rebels in the East, which resulted in the temporary suspension of diplomatic relations between Sudan and Chad (CAP 2007).

Map 2. Terrain and Climate

The dry lands of much of eastern Chad are not conducive to provide sustainable solutions for refugees through subsistence agriculture. The scarcity of fuelwood and water is the biggest challenge. In the north of the eastern area, consumption of deadwood exceeds the present natural resources. In the south, the main self-reliance activities for refugees relate to the agricultural sector and small commerce.

Map 4. Refugees (as of Oct 2006)

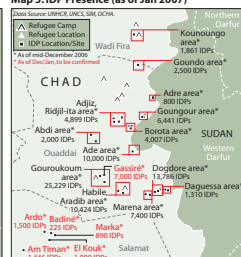

About 220,000 refugees are hosted in 12 camps along Chad's eastern border with Sudan, while an additional 10,000 are living with host communities. The continuous presence of refugees in eastern Chad coupled with increased displacements of chadian population is source of increased tensions between communities. Chad hosts 47,500 Central African refugees on its border with Central African Republic.

Map 3. Refugee Trends

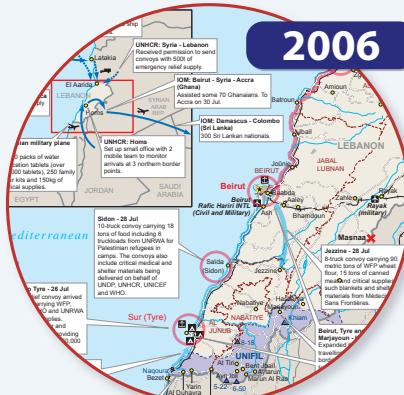

The country is host to a large refugee population comprising Sudanese refugees that fled the Darfur war since 2003, and refugees that fled insecurity from northern Central African Republic and crossed over into southern Chad. In 2007, given the increased level of insecurity in Darfur and eastern CAR, the return of refugees is hardly expected. Instead, inflows of new refugees are expected.

Map 5. IDP Presence (as of Jan 2007)

Escalation of violence in eastern Chad has resulted in the displacement of an estimated 100,000 Chadians, the majority of whom are women and children. IDPs remain in insecure border areas where humanitarian access is limited. The Chadian government and humanitarian organisations have agreed to allow setting up camps for the IDPs, so as not to create a pull-factor. IDPs are assisted through community based programs as circumstances allow. (CAP 2007).

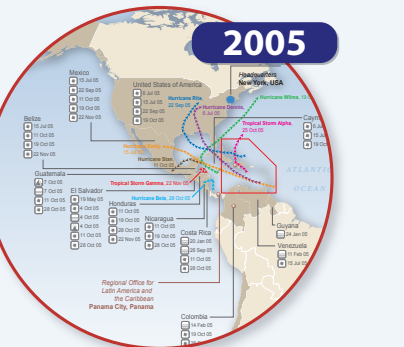

2006

Software: ArcGIS and Adobe Illustrator

- 1,771 maps published (129 created by ReliefWeb).

2005

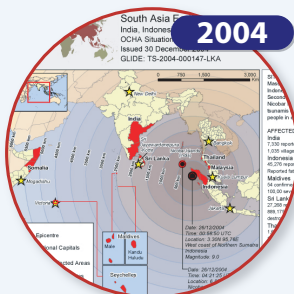

Software: ArcGIS and Adobe Illustrator

- Introduction of graphic design.
- Creation of new symbols.
- Use of UN standard data.
- Expansion of mapping capacity to Geneva office.

- 860 maps published (152 created by ReliefWeb).

2004

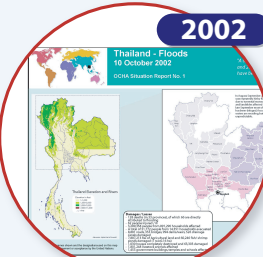

Software: ArcView

- Updated map template consistent with the new Map Centre section on website.
- Map series developed to support the field requests.
- Production of situation map for every emergency covered by ReliefWeb.
- Map Centre based in New York office.

- 537 maps published (30 created by ReliefWeb).

2002

Software: ArcGIS

- ReliefWeb website redesign, creation of new map template.
- 745 maps published (142 created by ReliefWeb).

With 2,500 sources and 24-hour coverage by offices in New York, Geneva and Kobe, ReliefWeb aims to strengthen the response capacity of the humanitarian relief community through the timely dissemination of reliable information on natural disasters and complex

emergencies. In order to provide balanced coverage, ReliefWeb partners with a broad range of sources from the UN System, NGOs, Governments, academic institutions and the media.

1996

Software: DeLorme

- Simple situation map showing the affected area.
- Simple reference map using blue, red and greyscale color.
- The map was created in Geneva using DeLorme software donated by ResponseNet.

- 308 maps published (45 created by ReliefWeb).

ReliefWeb was launched in October 1996 and is administered by the UN Office for the Coordination of Humanitarian Affairs (OCHA).

How we create maps...

Global Level

1 Complex Emergency/Natural Disaster

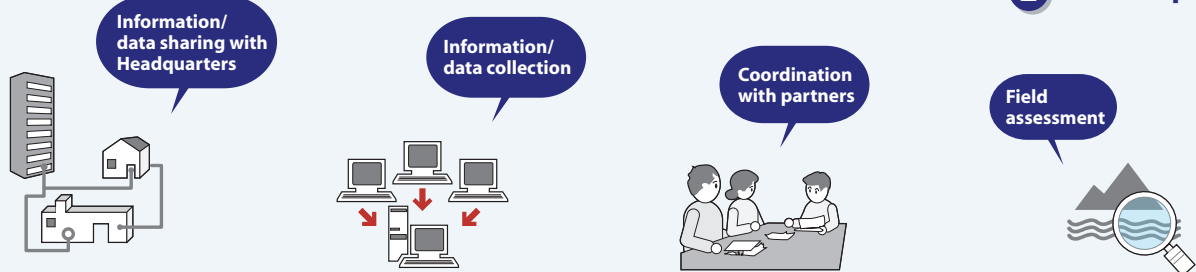

Flood, Tsunami, Cyclone, Tornado, Landslide, Earthquake, Volcanic Eruption, Extreme Temperature, Heavy Snowfall, Refugees, Internally Displaced Persons, Food Security, Drought ...

1,660 disasters covered by ReliefWeb since 1996 (as of May 2007)

Field Level

2 Field response
