

Structured Humanitarian Assistance Reporting (SHARE)

Presented by:

Pablo Recalde, UN OCHA

Dennis King, UNICEF

Rhonda Davis, UN OCHA

8 February 2001

Objectives of the Presentation

- Generic overview of the work currently under way
- Show some examples of practical applications
- Link the approach to other related initiatives

Information in Emergencies

- From early phases of an emergency information is critical
- locations and numbers of affected people,
- the extent and distribution of damage and needs,
- No single organization or entity has all of this information
- the locations of assistance projects and other resources,
- the factors affecting the security of the affected population
- Time is of the essence and assistance workers
- Integration of cross-sectoral, institutional and geographical data increases the quality of analysis for decision-making

The Geographic Information Support Team (GIST)

- Provide a forum for geographic and geo-referenced information and data exchange amongst humanitarian response agencies and donors

What is it? It is a group of technical experts

Who are they? UNHCR, UNICEF, FAO, WFP, OCHA,

World Bank, USAID/OFDA, EU/IRC

- Promote the use of geo-referencing to enhance data and information co-ordination to improve humanitarian response

What do they do?

- Identify specialized resources and geographic information available/required to enhance support for potential and ongoing emergency operations

The Structured Humanitarian Assistance REporting Approach (SHARE)

- Simple, common standards in collecting and reporting humanitarian-related information
- Based on date of information, source of information and location

SHARE - Basic Information Reporting Standards

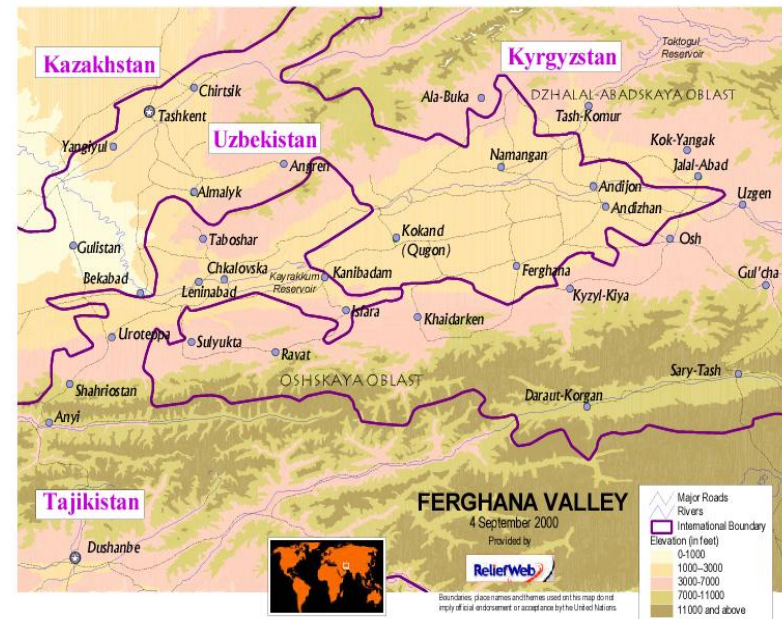

- Date/Time Stamp (date the information was collected and frequency - date range)
- Geo-reference (region, country, 1st administrative unit, 2nd administrative unit, population centre, latitude/longitude)
- Source of information (provider - collector)
- Information about the data (measurements, methodology, terms, etc.)

Elements of Humanitarian Information

- Baseline Thematic data/information
- Sectoral Assessment
- Needs Assessment
- Situation Reporting
- Commodity Distribution Tracking/Logistics
- Monitoring and Evaluation

Baseline Thematic Information SHARE Applications

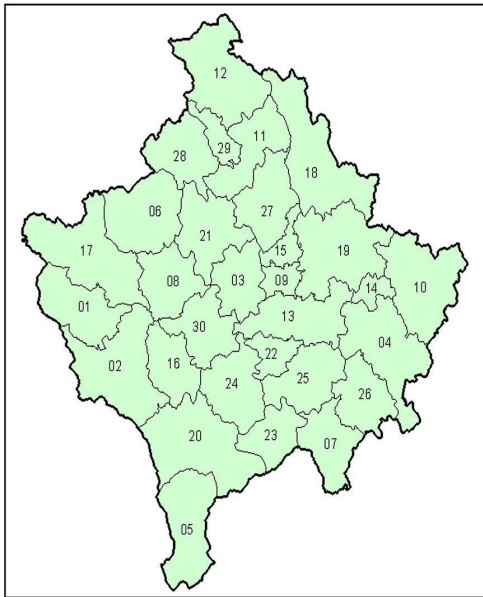

- Ferghana Valley -
Tajikistan, Kazakhstan,
Uzbekistan, Kyrgyzstan
- Sept. 2000
- OCHA/ReliefWeb
- Elevations, major roads, rivers, and international borders

Baseline Thematic Information

SHARE application

Municipalities in Kosovo

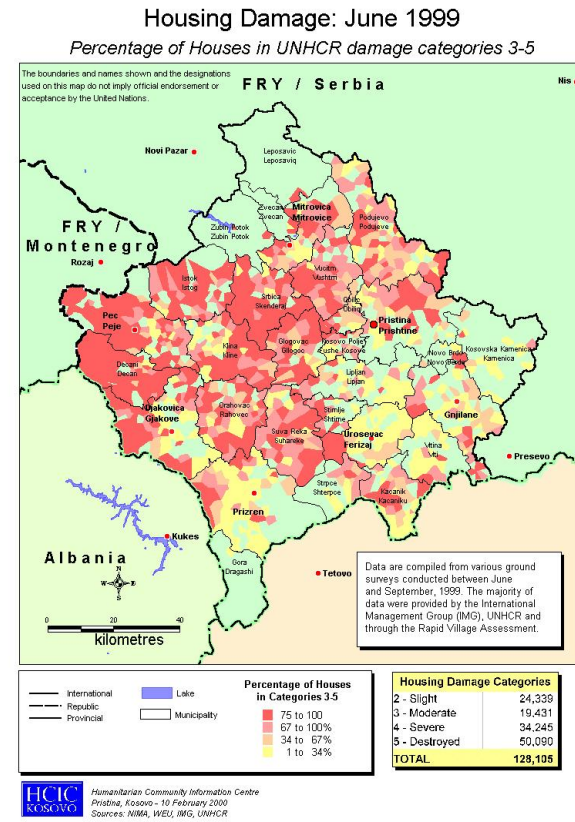

Mcode	Albanian	Serbian	Turkish

- Municipalities in Kosovo
- June 2000
- UN Humanitarian Community Information Centre
- Geo-codes for locations named in Albanian, Serbian and Turkish

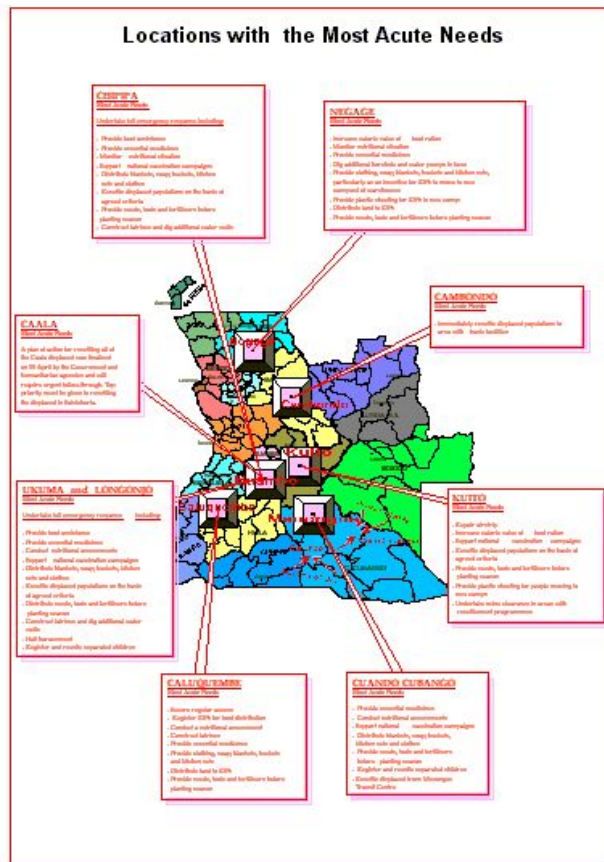

Sectoral Assessment SHARE Application

- **Kosovo Housing Damage**
- June 1999
- UNHCR
- Data compiled from ground surveys between June - Sept. 1999 using Rapid Village Assessment methodology
- Color shows degree of damage

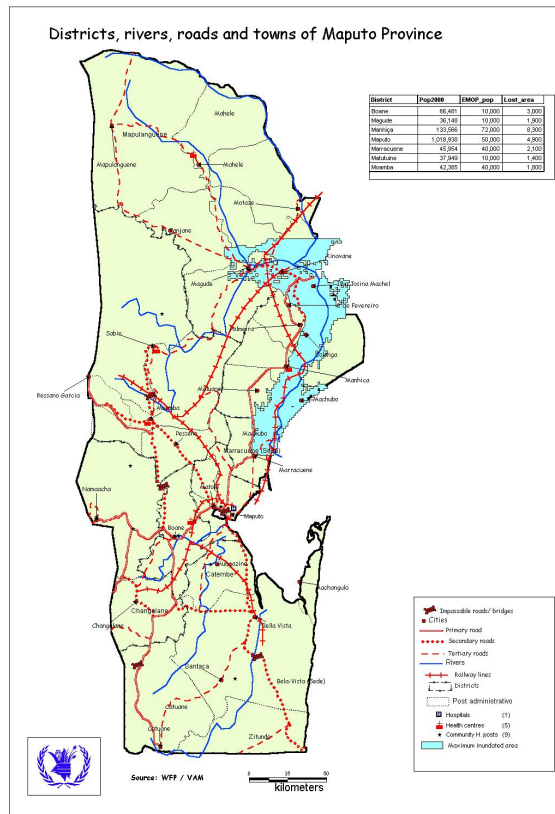

Needs Assessment

SHARE Application

- Angola Needs Assessment
- April 2000
- UN Inter-agency rapid needs Assessment/OCHA
- Survey of 31 locations in ten provinces
- Used WHO Guidelines and Sphere Standards
- food; health; nutrition; non-food items, emergency shelter; water and sanitation, protection; and agricultural inputs.

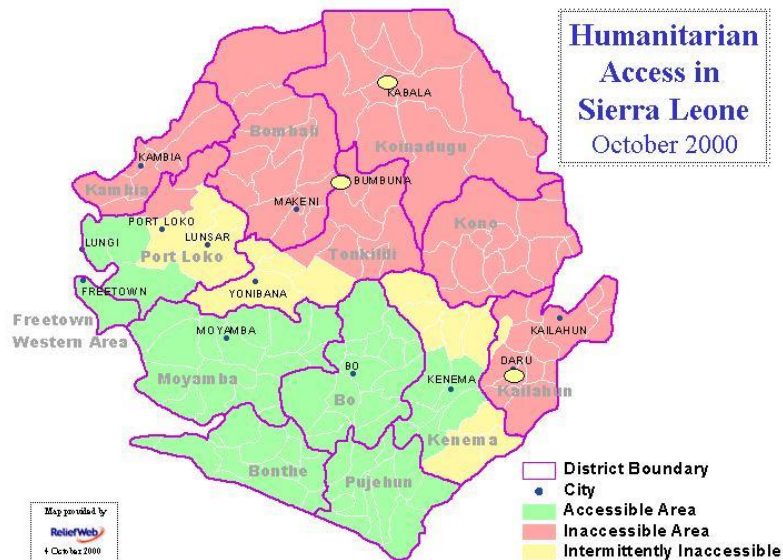

Situation Reporting SHARE Application

- Maputo Province
location of
affected/assisted
populations, roads,
railroads, warehouses
- March 2000
- WFP/VAM
- Affected numbers approximate, includes displaced and those who lost their crops

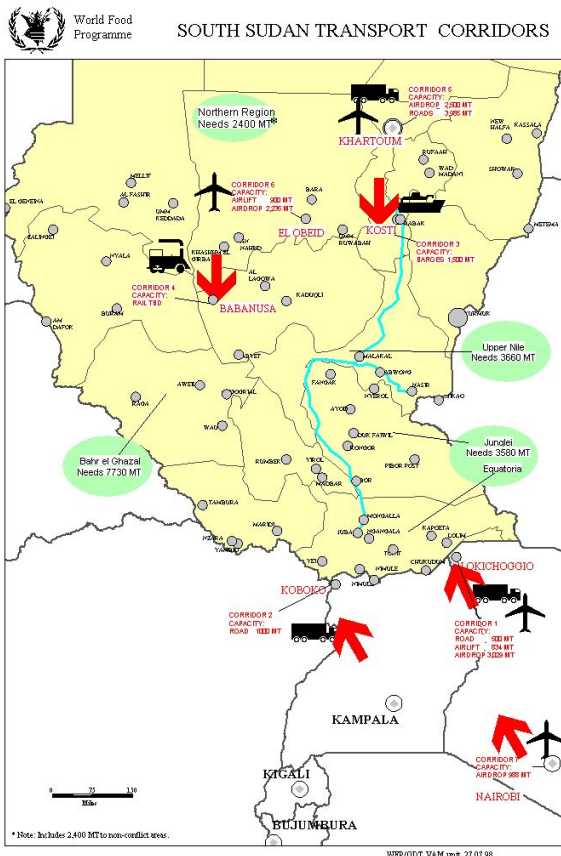

Situation Reporting SHARE Application

- Humanitarian Access in Sierra Leone
- October 2000
- OCHA
- Color coded for degrees of accessibility

Logistics/Commodity Tracking

SHARE Application

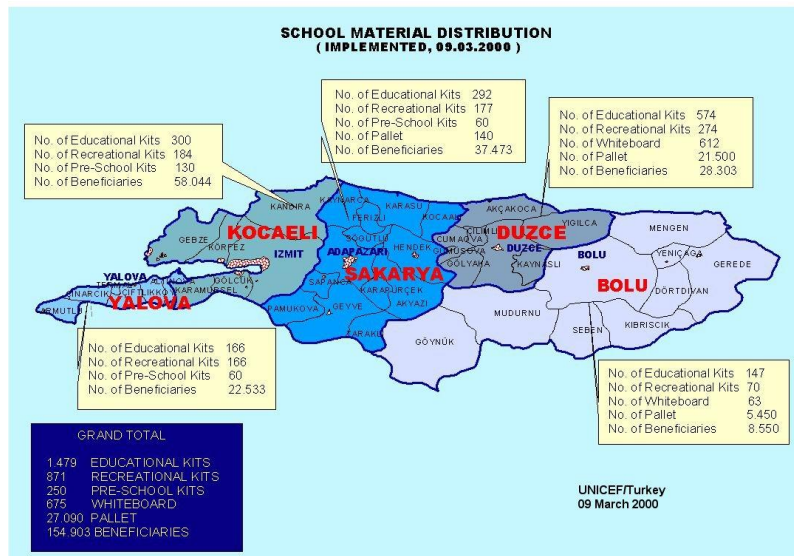

- Southern Sudan
- Transport Corridors
- July 1998
- WFP/VAM
- Road, barge, rail, airlift, airdrop
- Corridor capacity
- Food needs
- Scale: miles

Logistics/Commodity Tracking

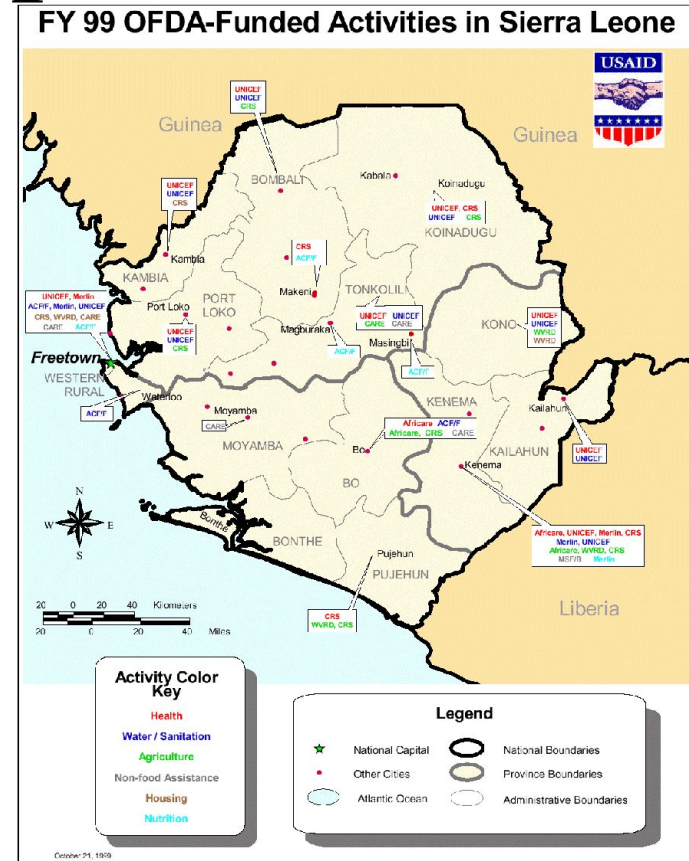

SHARE Application

- School Material Distribution in earthquake affected provinces of Turkey
- March 2000
- UNICEF
- Quantity of UNICEF educational kits, recreational kits, pre-school kits

Monitoring and Evaluation SHARE Application

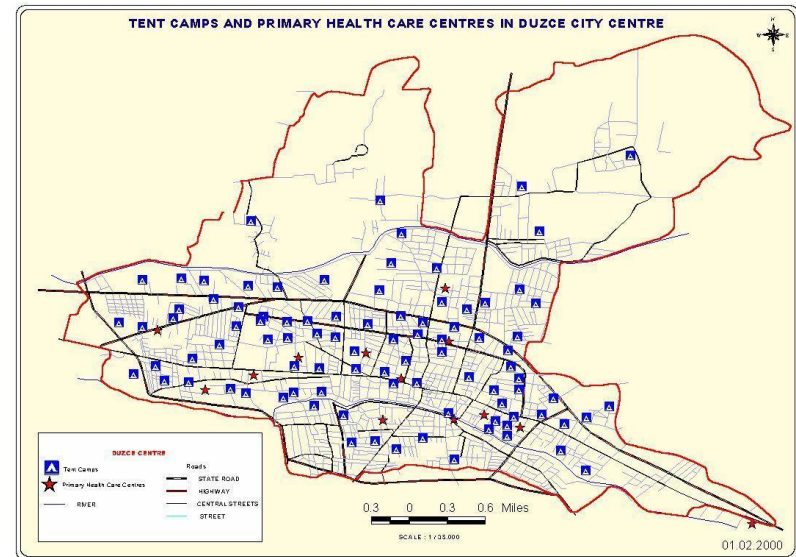

- **OFDA-Funded Activities**
- 21 Oct. 1999
- USAID/OFDA
- NGO/IO sectoral relief activities - provincial coverage and base of operations
- Sectors color-coded

October 21, 1961

Monitoring and Evaluation SHARE Application

- Turkey Earthquake -
Duzce City tent camps
and primary health
centers
- Feb. 2000
- UNICEF and Govt. of
Turkey
- Scale: 1:35,000
- miles

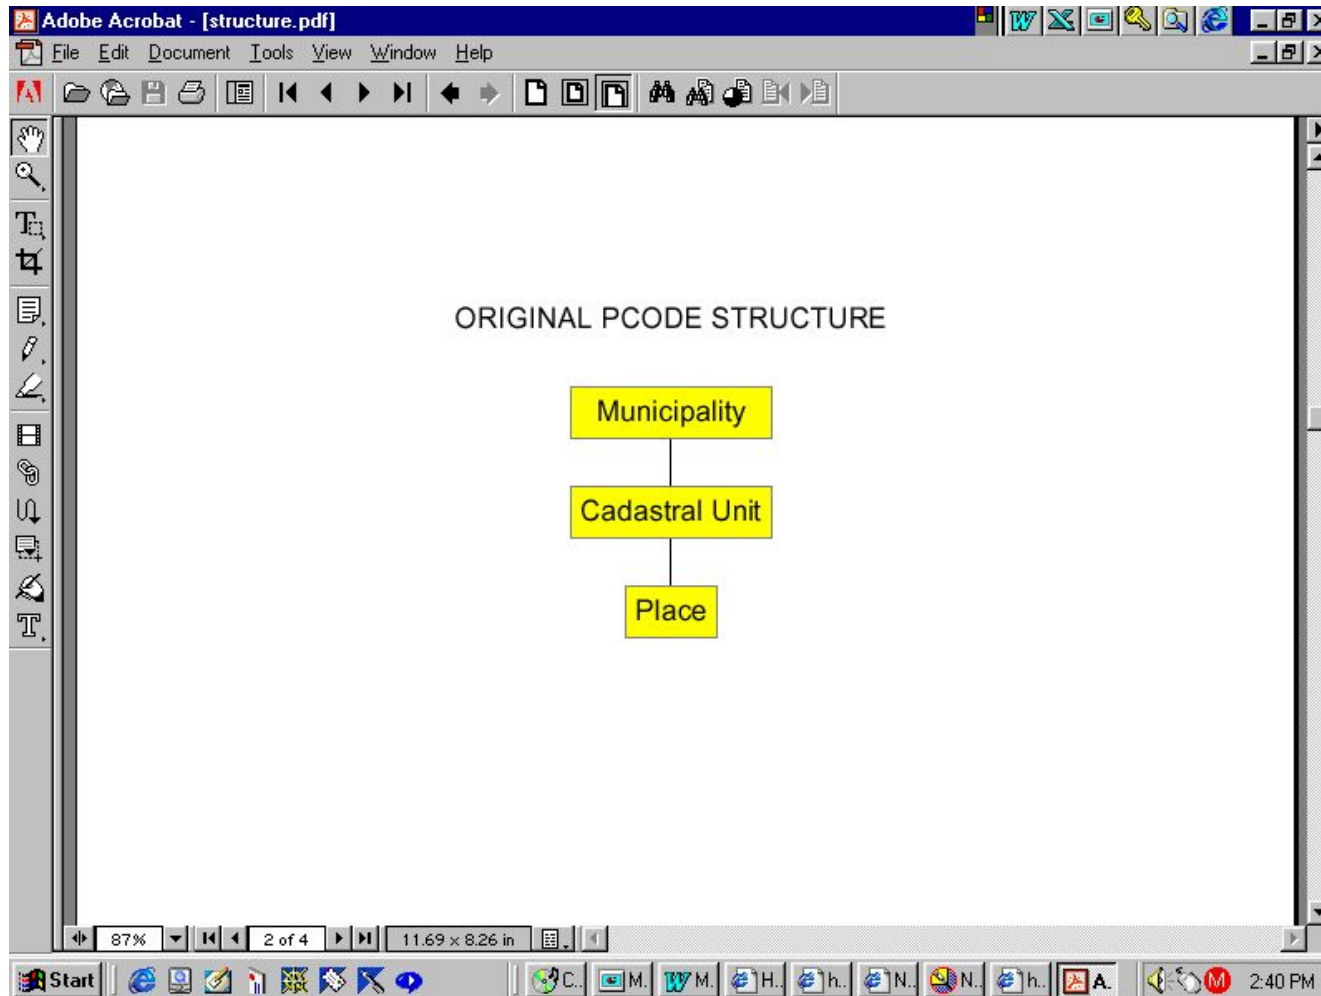

Building a system

Note: Circle 'None' if no such building exists within the village

2

- Broken windows, door locks and hinges, roof tiles
- Cut-off from electricity, water
- Can be repaired

3

- Up to 30% roof damage
- Light shelling or bullet impact on walls
- Partial fire damage
- Can be repaired

4

- Over 30% roof damage
- Severe fire damage
- Need for replacement of floors
- Doors and windows destroyed
- All piping, wiring destroyed
- Can be repaired

5

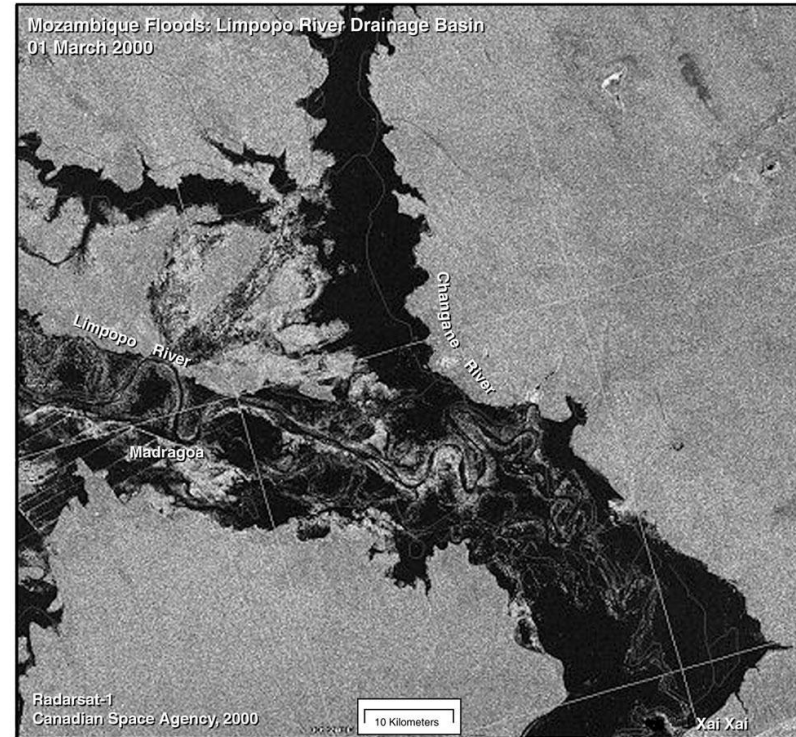

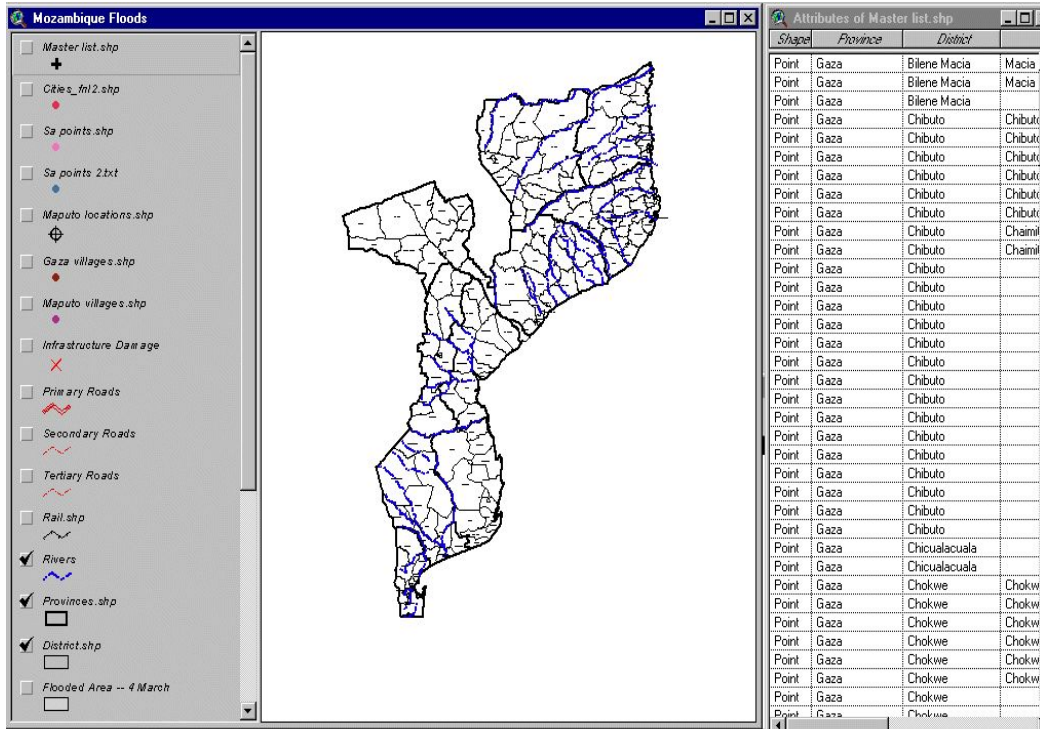

- Destroyed
- Needs reconstruction
- Cannot be repaired

 Municipality

Percentage of Houses in Categories 3-5
 75 to 100%
 67 to 100%
 34 to 67%
 1 to 34%

Housing Damage Categories	
2 - Slight	24,339
3 - Moderate	19,431
4 - Severe	34,245
5 - Destroyed	50,090
TOTAL	128,105

Example: Program Coordination Uses

KOSOVO: Villages with Shelter Agency Presence

15-Nov-99 (v2)

This map shows, in blue, which villages have at least one organisation providing or planning to provide shelter assistance.

For villages without agency coverage the assistance category (A,B,C) is given. Where category B (yellow) or C (red) suggests that a high-priority village is not receiving any assistance.

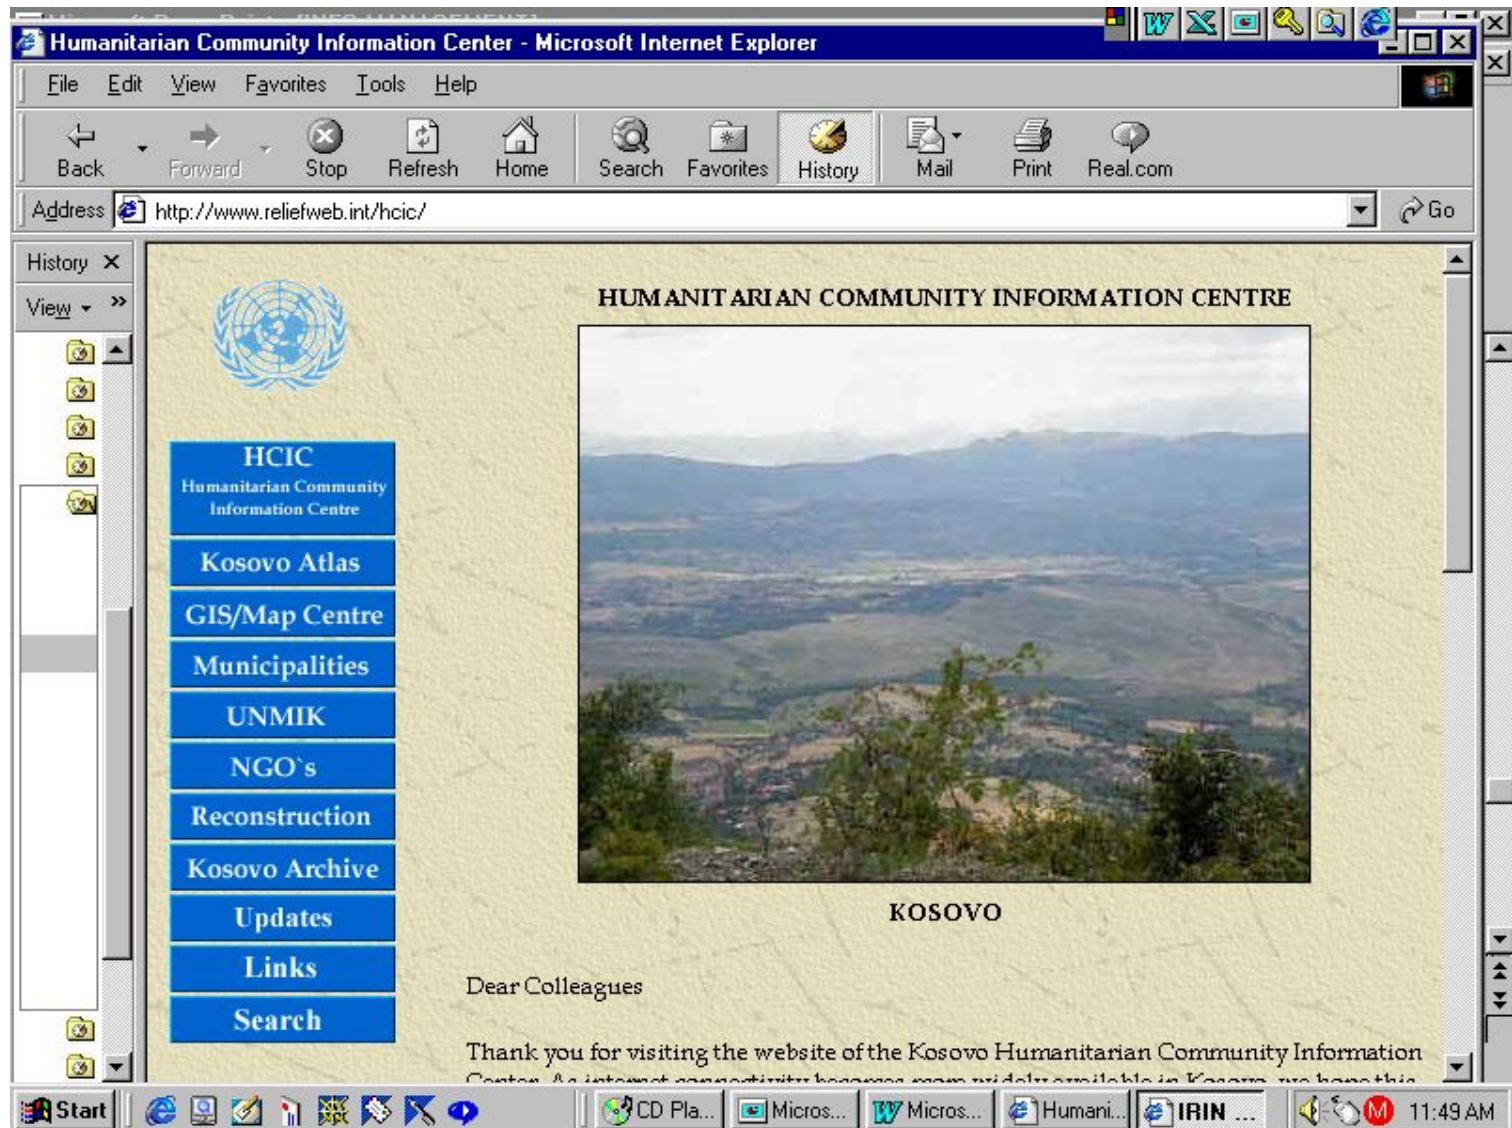

Note: Data collection is ongoing. Information on this map should not be taken as necessarily authoritative.

- Agency Present but no Survey Data
- Agency Planning / Providing Assistance
- No data
- A - No assistance needed
- B - Assistance needed
- C - Alternative shelter needed

Natural Disaster Risk Hot Spots

8 February 2001

Presented by:
Maxx Dilley, World Bank

Geographic Analysis for Disaster Prevention and Preparedness:

- Identification and interpretation of global disaster risk hotspots

Sources of natural disaster risk:

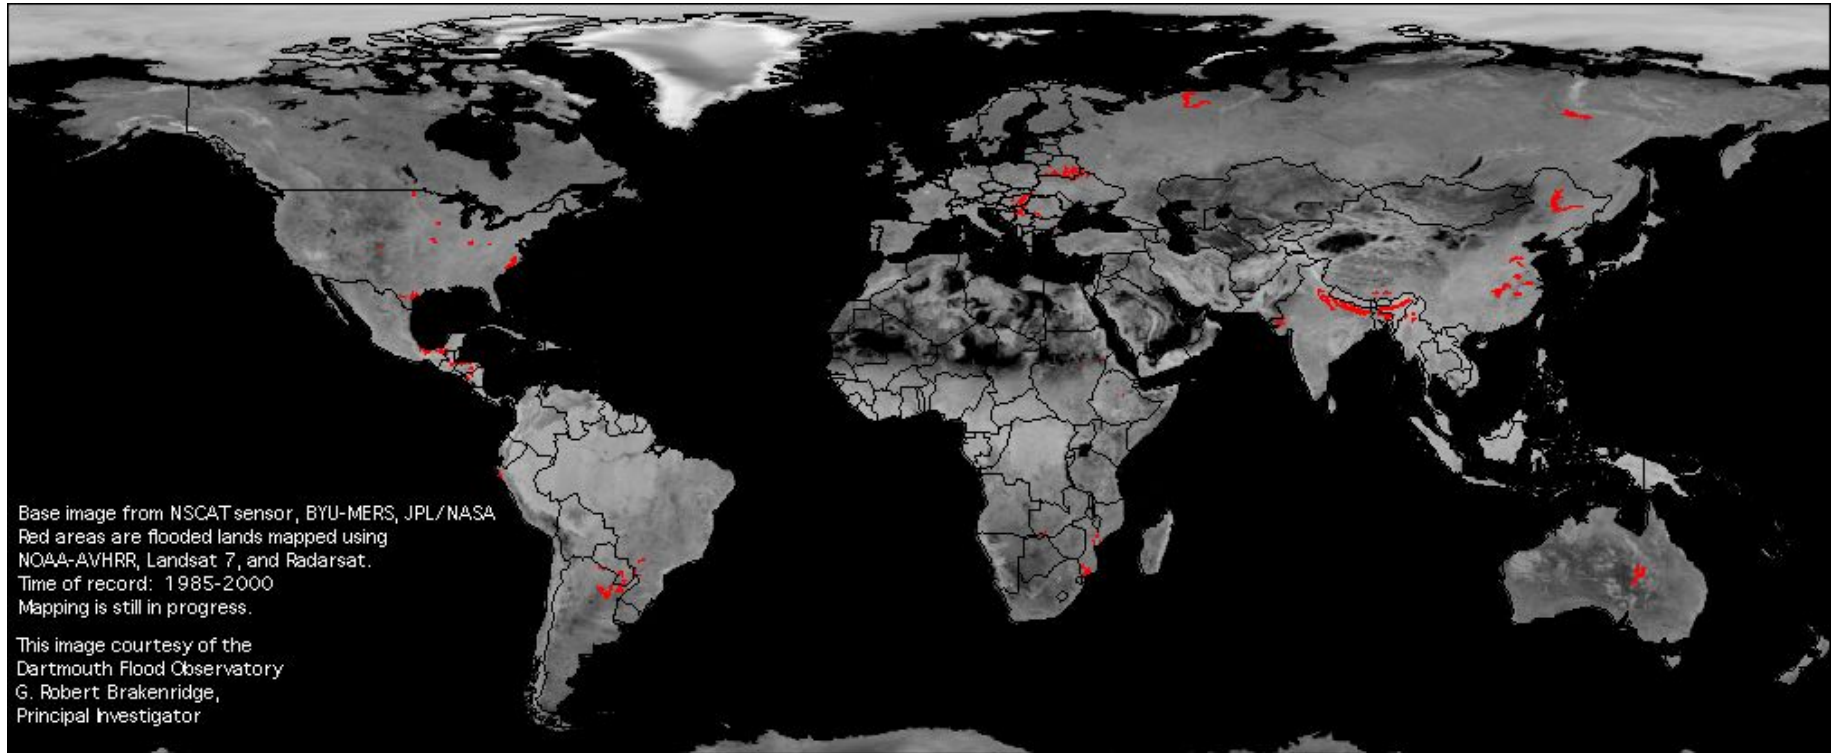

- hazards, including floods, drought, storms, earthquakes and volcanoes
- vulnerability to the particular hazards to which people, infrastructure and economic activities are likely to be exposed at a given location.

**How can the most likely
locations of future natural
disasters be identified?**

And the vulnerability of people,
infrastructure and economic activities
systematically reduced?

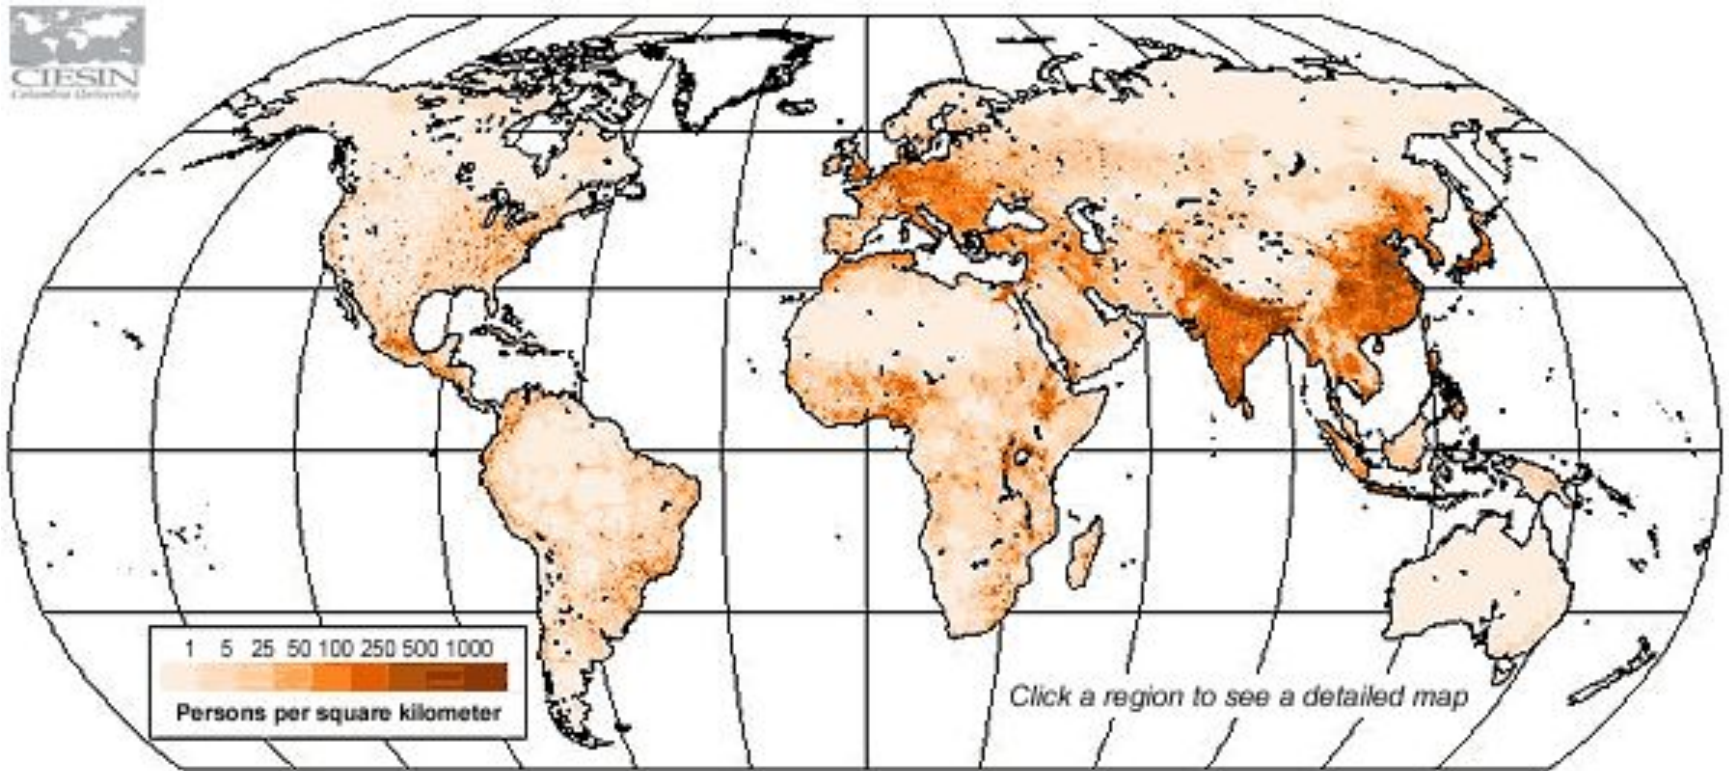

Flood Extent 1985-2000

(Dartmouth Flood Observatory)

Population Density

(Center for International Earth Science Information Network)

Geographic Coverages

Hazard and parameters	Exposed elements
Drought - coefficient of rainfall variation - minimum annual rainfall - potential evapo-transpiration - soil type	Rain-fed agriculture Population density Water resources
Flooding - historical flood extent - maximum probable flood levels	Urban areas Population density Lifelines and critical infrastructure Land use
Storms (high winds) - maximum wind speeds - historical storm trajectories	Population density Predominant building type Land use
Earthquakes Peak ground acceleration per 50 years	Urban areas Predominant building type Population density
Volcanoes - probability of eruption - probable spatial extent of ejecta	Population density Lifelines and critical infrastructure Land use
Tsunamis - probable occurrence - probable spatial extent	Population density Urban areas Lifelines and critical infrastructure
Landslides - slope - soil type	Population density Lifelines and critical infrastructure Land use

Expected Outcomes

- resolution of disaster risk hotspots at sub-national scales
- input for prioritization of vulnerability assessment and risk reduction efforts

Implementation

- partner organizations with data and Geographic Information System expertise
- interpretation of results with stakeholders
- two-year duration
- coordinated through the Geographic Information Support Team and ProVention Consortium
