About FEWS NET

FEWS NET is a leading provider of early warning and analysis on acute food insecurity around the world. FEWS NET relies on a global network of partners to report and provide insightful information on the severity of food insecurity in dozens of countries.

Providing evidence-based early warning information and analysis of food insecurity and its drivers worldwide

The United States Agency for International Development (USAID) established the Famine Early Warning Systems Network (FEWS NET) in 1985 in response to devastating famines in East and West Africa and a critical need for better and earlier warning of potential food security crises.

FEWS NET is a leading global provider of timely, accurate, evidence-based, and transparent early warning information and analysis of current and future acute food insecurity. FEWS NET informs decisions on humanitarian planning and responses in the world's most food-insecure countries.

For four decades, FEWS NET and its partners have continued to monitor the increasingly complex factors influencing food insecurity, such as weather and climate, conflict, agricultural production, markets and trade, and nutrition. Considered together within the context of local livelihoods, FEWS NET provides integrated food security analysis that forecasts outcomes six to twelve months in advance.

Our analytical approach

To support governments, relief agencies, non-governmental organizations (NGOs), researchers, and journalists planning for, responding to, and reporting on humanitarian food crises, FEWS NET publishes and shares:

- Country-specific integrated food security analysis products that report on current and forecasted levels of acute food insecurity
- Alerts on emerging or likely acute food insecurity crises
- Specialized reports on factors that contribute to or mitigate food insecurity, including weather and climate, markets and trade, agricultural production, conflict, livelihoods, nutrition, and humanitarian food assistance

Strengthening our networks

FEWS NET's network development strategy involves the development of enhanced, durable, effective, and sustainable information networks in food-insecure countries and regions. This approach is implemented through localized, context-specific national and regional strategies that are developed alongside food security partners involved in the targeted network.

Our approach to network development →

Our partners

FEWS NET's work is implemented by a team of partners, including the National Aeronautics and Space Administration (NASA), the National Oceanic and Atmospheric Administration (NOAA), the University of California-Santa Barbara's Climate Hazards Center (UCSB-CHC), the U.S. Department of Agriculture (USDA), the U.S. Geological Survey (USGS), Chemonics International Inc., the American Institutes for Research (AIR), and Tetra Tech.
